# High Quality CAS-005 Prep Guide Dump is Most Valid CAS-005 Certification Materials

As you know, your company will introduce new talent each year. In the face of their excellent resume, you must improve your strength to keep your position! Our CAS-005 study questions may be able to give you some help. What you need may be an internationally-recognized CAS-005 certificate, perhaps using the time available to complete more tasks. With our CAS-005 study materials, you will pass the exam in the shortest possible time.

If you want to pass the CAS-005 exam in the lest time with the lest efforts, then you only need to purchase our CAS-005 learning guide. You can own the most important three versioons of our CAS-005 practice materials if you buy the Value Pack! Also you can only choose the one you like best. As you know, the best for yourself is the best. Choosing the best product for you really saves a lot of time! CAS-005 Actual Exam look forward to be your best partner.

>> CAS-005 Exam Blueprint <<

100% Pass Quiz 2025 CompTIA CAS-005 Perfect Exam Blueprint

In modern time, new ideas and knowledge continue to emerge, our CAS-005 training prep has always been keeping up with the trend. Besides, they are accessible to both novice and experienced customers equally. Some customer complained to and worried that the former CAS-005 training prep is not suitable to the new test, which is wrong because we keep the new content into the CAS-005 practice materials by experts.

CompTIA SecurityX Certification Exam Sample Questions (Q107-Q112):

NEW QUESTION # 107
A company designs policies and procedures for hardening containers deployed in the production environment.
However, a security assessment reveals that deployed containers are not complying with the security baseline.
Which of the following solutions best addresses this issue throughout early life-cycle stages?

- A. Running security assessments regularly and checking for the security baseline on containers already in production
- B. Finding hardened container images and enforcing them as the baseline for new deployments
- C. Installing endpoint agents on each container and setting them to report when configurations drift from the baseline
- D. Creating a pipeline to check the containers through security gates and validating the baseline controls before the final deployment

Answer: D

Explanation:
Comprehensive and Detailed Explanation:
SecurityX CAS-005 secure DevOps guidance recommends integrating security controls into the CI/CD pipeline. By validating container security baselines at security gates before deployment, noncompliant builds are stopped early, ensuring consistency across environments.
* Option B is useful but does not ensure compliance if changes are made after image creation.

* Option A detects drift but only after deployment.
* Option D is reactive and does not prevent insecure deployments.

NEW QUESTION # 108

A user from the sales department opened a suspicious file attachment. The sales department then contacted the SOC to investigate a number of unresponsive systems, and the team successfully identified the file and the origin of the attack. Which of the following is the next step of the incident response plan?

- A. Recovery
- B. Remediation
- C. Containment
- D. Response

Answer: C

Explanation:
Incident response follows a standard process (e.g., NIST 800-61): Preparation, Identification, Containment, Eradication, Recovery, Lessons Learned. After identifying the attack (file and origin), the next step is Containment-limiting the spread or impact (e.g., isolating systems) before remediation or recovery.
* Option A:Remediation (fixing the root cause) follows containment.
* Option B:Correct-containment prevents further damage post-identification.
* Option C:"Response" is too vague; it encompasses all steps.
* Option D:Recovery (restoring systems) comes after containment and eradication.

NEW QUESTION # 109

Due to locality and budget constraints, an organization's satellite office has a lower bandwidth allocation than other offices. As a result, the local security infrastructure staff is assessing architectural options that will help preserve network bandwidth and increase speed to both internal and external resources while not sacrificing threat visibility. Which of the following would be the best option to implement?

- A. Distributed connection allocation
- B. SD-WAN vertical heterogeneity
- C. Local caching
- D. Content delivery network

Answer: C

Explanation:
The goal is to optimize bandwidth, increase speed, and maintain threat visibility in a low-bandwidth satellite office.Local cachingstores frequently accessed data locally, reducing bandwidth usage by minimizing repeated requests to external or internal resources. It speeds up access and doesn't inherently reduce security visibility if paired with monitoring tools.
* Option A:Distributed connection allocation might balance traffic but doesn't directly reduce bandwidth usage or speed up access.
* Option B:Local caching is ideal-reduces bandwidth, improves performance, and maintains visibility with proper security controls.
* Option C:A CDN is great for external content delivery but less relevant for internal resources and doesn't inherently address threat visibility.
* Option D:SD-WAN improves WAN performance, but "vertical heterogeneity" is vague and not a standard term; it's less tailored to this scenario than caching.

NEW QUESTION # 110

An organization mat performs real-time financial processing is implementing a new backup solution Given the following business requirements?
* The backup solution must reduce the risk for potential backup compromise
* The backup solution must be resilient to a ransomware attack.
* The time to restore from backups is less important than the backup data integrity
* Multiple copies of production data must be maintained
Which of the following backup strategies best meets these requirement?

- A. Enabling remote journaling on the databases to ensure real-time transactions are mirrored
- B. Setting up antitempering on the databases to ensure data cannot be changed unintentionally
- C. Creating a secondary, immutable storage array and updating it with live data on a continuous basis
- D. Utilizing two connected storage arrays and ensuring the arrays constantly sync

Answer: C

Explanation:
A: Creating a secondary, immutable storage array and updating it with live data on a continuous basis: An immutable storage array ensures that data, once written, cannot be altered or deleted. This greatly reduces the risk of backup compromise and provides resilience against ransomware attacks, as the ransomware cannot modify or delete the backup data. Maintaining multiple copies of production data with an immutable storage solution ensures data integrity and compliance with the requirement for multiple copies.
Other options:
B: Utilizing two connected storage arrays and ensuring the arrays constantly sync: While this ensures data redundancy, it does not provide protection against ransomware attacks, as both arrays could be compromised simultaneously.
C: Enabling remote journaling on the databases: This ensures real-time transaction mirroring but does not address the requirement for reducing the risk of backup compromise or resilience to ransomware.
D: Setting up anti-tampering on the databases: While this helps ensure data integrity, it does not provide a comprehensive backup solution that meets all the specified requirements.

NEW QUESTION # 111
A security analyst is reviewing a SIEM and generates the following report:

Log source	Destination IP	Source IP	Hostname	Event ID	Action	Time
DEV001	192.168.1.2	192.168.2.2	VM001	9928	Deny connection	4:55:28
DEV001	192.168.3.2	192.168.2.2	VM001	1912	IPS Alert	7:21:41
DEV001	10.1.1.1,192.168.2.2,VM001,1822 Malware detection,8:11:12					
DEV001	10.1.1.1	192.168.2.2	VM001	9927	Allow connection	8:15:32

Later, the incident response team notices an attack was executed on the VM001 host. Which of the following should the security analyst do to enhance the alerting process on the SIEM platform?

- A. Perform a log correlation on the SIEM solution.
- B. Improve parsing of data on the SIEM.
- C. Create a new rule set to detect malware.
- D. Include the EDR solution on the SIEM as a new log source.

Answer: B

NEW QUESTION # 112
......

All your worries can be wiped out because our CompTIA CAS-005 learning quiz is designed for you, I don't think any other training site can produce the result that ActualTorrent can.

Pass Guaranteed Quiz CompTIA - CAS-005 - CompTIA SecurityX Certification Exam Useful Exam Blueprint

Thus you can have an efficient learning and a good CAS-005 preparation of the exam, If you are finding it difficult to cope with your busy daily routine and professional work but also considering preparing for the CAS-005 test, then you should consider ActualTorrent certification exam services.
