NEW QUESTION # 10

What are the core capabilities in SAP Cloud ALM for operations? Note: There are 3 correct answers to this question.

- A. Event and alert management
- B. Operation automation
- C. Upgrade analysis
- D. License management
- E. Monitoring

**Answer: A,B,E**

Explanation:

SAP Cloud ALM for operations supports several core capabilities essential for the maintenance and optimal functioning of SAP systems:

- \* A. Monitoring: This includes comprehensive system monitoring, covering performance metrics, system health, and more, crucial for maintaining the reliability and availability of SAP solutions.
- \* C. Event and alert management: This capability ensures that any incidents or anomalies within the SAP environment are detected, alerted, and managed efficiently, allowing for quick resolution and minimal disruption.
- \* D. Operation automation: Automating daily operations tasks is key to reducing manual overhead, increasing efficiency, and ensuring consistency across processes within the SAP environment. Option B (License management) and E (Upgrade analysis) while important, are not listed as part of the core capabilities for SAP Cloud ALM for operations per the usual categorization by SAP.

#### **NEW QUESTION # 11**

Which accelerators support the fit-to-standard workshop in the Explore phase? Note: There are 2 correct answers to this question.

- A. Quality Gate Checklist
- B. Backlog Template
- C. Business Process Design Template
- D. Test Strategy

**Answer: B,C**

#### **NEW QUESTION # 12**

You are defining the testing strategy for your project.

What would you include in a scope of Integration Test? Note: There are 2 correct answers to this question.

- A. Interfaces with other applications
- B. Connectivity between database and application servers
- C. Quality of data for migration
- D. Functionality of end-to-end business processes

**Answer: A,D**

Explanation:

When defining the testing strategy for a project, especially in the scope of Integration Testing, it is crucial to include:

- \* A. Interfaces with other applications: This ensures that the application under test correctly interacts with other systems, which is critical for operations that depend on multiple interconnected systems.
- \* D. Functionality of end-to-end business processes: Testing the complete functionality of business processes from start to finish ensures that the system supports all required tasks and workflows effectively, identifying any process or data flow issues before going live. Options B (Connectivity between database and application servers) and C (Quality of data for migration) are relevant to system and data migration testing but do not typically fall under the specific scope of Integration Testing, which is more focused on functional and interface validations.

### NEW QUESTION # 13

What is the purpose of the scrum board? Note: There are 2 correct answers to this question.

- A. To manage the scrum resources load
- B. To visualize scrum team progress
- C. To represent the work
- D. To represent the scrum team setup

**Answer: B,C**

Explanation:

The purpose of the scrum board in Agile project delivery is to:

- \* B. To visualize scrum team progress. The scrum board visually displays the progress of the sprint, showing what has been completed, what is in progress, and what is yet to be started.
- \* C. To represent the work. It provides a visual representation of all the tasks within the sprint backlog, helping the team to see the workload and manage their time accordingly.

The scrum board is a fundamental tool in Scrum for maintaining team organization and fostering a sense of accountability and progress among team members. References:
