Health-Cloud-Accredited-Professional Exam is administered online and can be taken from anywhere in the world, making it a convenient option for busy healthcare professionals.

Salesforce Health Cloud Accredited Professional Sample Questions (Q97-Q102):

NEW QUESTION # 97
While running user acceptance testing (UAT) for a customer, an end user is unable to view certain data on the Enhanced Timeline for Contact Center.
What should be the first step in troubleshooting this issue?

- A. Ensure the user has the right object permissions.
- B. Check the Enhanced Patient permission set assignment.
- C. Check the Health Cloud Data permission set assignment.
- D. Ensure the component has been activated.

Answer: A

Explanation:
When an end user is unable to view certain data on the Enhanced Timeline for Contact Center during User Acceptance Testing (UAT), the primary step in troubleshooting should be to verify that the user possesses the appropriate object permissions.
Understanding Object Permissions:
* Purpose: Object permissions determine a user's ability to create, read, edit, or delete records of a particular object within Salesforce.
* Types of Permissions:
* Read: Allows users to view records.
* Create: Permits users to add new records.
* Edit: Enables users to modify existing records.
* Delete: Grants users the ability to remove records.
Troubleshooting Steps:
* Verify User's Profile and Permission Sets:
* Profiles: Check the user's assigned profile to ensure it includes the necessary object permissions for the data intended to be displayed on the Enhanced Timeline.
* Permission Sets: Review any permission sets assigned to the user that might grant additional object permissions.
* Ensure Field-Level Security:
* Confirm that field-level security settings permit the user to access the specific fields associated with the timeline data.
* Check Sharing Settings:
* Assess the organization's sharing rules and settings to ensure the user has the requisite access to the records in question.
References:
Salesforce Security Guide: For detailed information on configuring object permissions and ensuring proper access controls, consult

the Salesforce Security Guide: Salesforce Security Guide Conclusion:
Ensuring that users have the correct object permissions is crucial for accessing data on the Enhanced Timeline. By verifying and configuring these permissions appropriately, administrators can resolve visibility issues and enhance user experience during UAT.

NEW QUESTION # 98
How does an administrator display device information on a patient card?

- A. Create a custom field on the EHR_MedicalDevices with a formula that returns the nf ormauon to display on patient card
- B. Create an Asset record and create a Care Registered Device record that looks up to the Asset record and then looks up to the Account record for the Patient
- C. Create a custom field on the FilterCondition_c with a formula that returns the information to display on patient card
- D. Create a custom field on the EHR_DeviceRequest with a formula that returns the information to display on patient card
- E. Create a custom field on the EHR_Patient object with a formula that returns the information to display on patient card

Answer: B

NEW QUESTION # 99
What is Health Cloud? (Choose two.)

- A. Health Cloud is an engagement layer.
- B. Health Cloud is a new type of Electronic Health Record.
- C. Core services exposed by permission license.
- D. An AppExchange core package and third party service.
- E. Health Cloud is part managed package and part core services.

Answer: A,E

Explanation:
According to the Salesforce documentation, Health Cloud is a health IT solution that helps healthcare organizations deliver personalized and collaborative care across every touchpoint. Some of the characteristics of Health Cloud are:
Health Cloud is an engagement layer that connects patients, providers, payers, and partners on a single platform. It enables seamless communication and collaboration across the healthcare ecosystem.
Health Cloud is part managed package and part core services. The managed package contains custom objects, fields, tabs, apps, components, and more that are specific to healthcare use cases. The core services include standard Salesforce features and functionality that are available across all Salesforce products.

NEW QUESTION # 100
A UX designer wants to change the formatting of an OmniStudio FlexCard field element to have a font of Times New Roman with a red color.
What are two ways the designer should make the changes?
Choose 2 answers

- A. Make edits t0 Field Properties.
- B. Write custom CSS.
- C. Make edits to Field Style.
- D. Made edits to Setup Panel.

Answer: B,C

Explanation:
To change the formatting of a field element in an OmniStudio FlexCard to use the Times New Roman font and a red color, the following approaches are viable:
* Custom CSS can be applied to define specific styling for field elements in a FlexCard.
* CSS rules can specify the font family (Times New Roman) and color (red) precisely, providing complete control over design details.
* Example:
1. Write Custom CSS (B):.my-custom-class {
font-family: "Times New Roman", serif;

color: red;
}
* This CSS class can be referenced in the FlexCard configuration.
* The Field Style section in the FlexCard Designer allows designers to set styling properties directly.
* Font family and color are common options available in the Field Style configuration, making it straightforward to apply basic formatting changes without writing code.
2. Make Edits to Field Style (D):Why Other Options Are Incorrect:
* A. Make edits to Field Properties: Field Properties control functional aspects of the field (e.g., field type or source) rather than styling.
* C. Make edits to Setup Panel: The Setup Panel configures overall FlexCard settings but does not handle individual field styling.

Custom Styling in OmniStudio

NEW QUESTION # 101
Which three of the following Health Cloud objects are part of the standard Care Management data Model? (Choose three)

- A. CarePlanGoal
- B. CareProgramGoal
- C. CareSpeciality
- D. CarePlan Template Task
- E. TimelineViewConfiguration

Answer: A,D,E

Explanation:
According to the Health Cloud Data Model Developer Guide, CarePlan Template Task, TimelineViewConfiguration, and CarePlanGoal are three Health Cloud objects that are part of the standard Care Management data model. CarePlan Template Task is a custom object that represents a task that is part of a care plan template. TimelineViewConfiguration is a custom object that defines how to display timeline events for a care plan. CarePlanGoal is a custom object that represents a goal that is part of a care plan. CareSpeciality and CareProgramGoal are not Health Cloud objects that are part of the standard Care Management data model.
