Guaranteed Associate-Cloud-Engineer Passing & Associate-Cloud-Engineer Reliable Study Questions

We are pleased to inform you that we have engaged in this business for over ten years with our Google Associate Cloud Engineer

Exam Associate-Cloud-Engineer exam questions. Because of our experience, we are well qualified to take care of your worried about the Associate-Cloud-Engineer Preparation exam and smooth your process with successful passing results.

Google Associate Cloud Engineer Exam Sample Questions (Q239-Q244):

NEW QUESTION # 239

You have an application that receives SSL-encrypted TCP traffic on port 443. Clients for this application are located all over the world. You want to minimize latency for the clients. Which load balancing option should you use?

- A. SSL Proxy Load Balancer
- B. HTTPS Load Balancer
- C. Internal TCP/UDP Load Balancer. Add a firewall rule allowing ingress traffic from 0.0.0.0/0 on the target instances.
- D. Network Load Balancer

Answer: A

Explanation:

Reference:

<https://cloud.google.com/load-balancing/docs/ssl>

NEW QUESTION # 240

Your customer has implemented a solution that uses Cloud Spanner and notices some read latency-related performance issues on one table. This table is accessed only by their users using a primary key. The table schema is shown below.

```
CREATE TABLE Persons (  
    person_id INT64 NOT NULL,      // sequential number based on number of registration  
    account_creation_date DATE,    // system date  
    birthdate DATE,               // customer birthdate  
    firstname STRING (255),       // first name  
    lastname STRING (255),        // last name  
    profile_picture BYTES (255)    // profile picture  
) PRIMARY KEY (person_id)
```

You want to resolve the issue. What should you do?

- A. Remove the `profile_picture` field from the table.
- B. Add a secondary index on the `person_id` column.
- C. Change the primary key to not have monotonically increasing values.
- D. Create a secondary index using the following Data Definition Language (DDL):

```
CREATE INDEX person_id_idx  
ON Persons (  
    person_id,  
    firstname,  
    lastname  
) STORING (  
    profile_picture  
)
```

- A. Option B
- B. Option A
- C. Option D
- D. Option C

Answer: D

Explanation:

As mentioned in Schema and data model, you should be careful when choosing a primary key to not accidentally create hotspots in your database. One cause of hotspots is having a column whose value monotonically increases as the first key part, because this results in all inserts occurring at the end of your key space. This pattern is undesirable because Cloud Spanner divides data among servers by key ranges, which means all your inserts will be directed at a single server that will end up doing all the work.

[https://cloud.](https://cloud.google.com/spanner/docs/schema-design#primary-key-prevent-hotspots)

NEW QUESTION # 241

Your company has many legacy third-party applications that rely on a shared NFS server for file sharing between these workloads. You want to modernize the NFS server by using a Google Cloud managed service. You need to select the solution that requires the least amount of change to the application. What should you do?

- A. Configure Firestore. Configure all applications to use Firestore instead of the NFS server.
- B. Create a Compute Engine instance and configure an NFS server on the instance. Point all NFS mounts to the Compute Engine instance.
- C. Create a Cloud Storage bucket. Configure all applications to use Cloud Storage client libraries instead of the NFS server.
- **D. Deploy a Filestore instance. Replace all NFS mounts with a Filestore mount.**

Answer: D

NEW QUESTION # 242

You have experimented with Google Cloud using your own credit card and expensed the costs to your company. Your company wants to streamline the billing process and charge the costs of your projects to their monthly invoice. What should you do?

- **A. Change the billing account of your projects to the billing account of your company.**
- B. Set up BigQuery billing export and grant your financial department IAM access to query the data.
- C. Grant the financial team the IAM role of Billing Account User'S on the billing account linked to your credit card.
- D. Create a ticket with Google Billing Support to ask them to send the invoice to your company.

Answer: A

NEW QUESTION # 243

You want to add a new auditor to a Google Cloud Platform project. The auditor should be allowed to read, but not modify, all project items.

How should you configure the auditor's permissions?

- A. Select the built-in IAM service Viewer role. Add the user's account to this role.
- B. Create a custom role with view-only service permissions. Add the user's account to the custom role.
- C. Create a custom role with view-only project permissions. Add the user's account to the custom role.
- **D. Select the built-in IAM project Viewer role. Add the user's account to this role.**

Answer: D

Explanation:

roles/Viewer role provides access to all resources under the projects but do not alter the state of these resources.
