<https://www.questionstube.com/exam/c1000-130/>

At QuestionsTube, you can read C1000-130 free demo questions in pdf file, so you can check the questions and answers before deciding to download the IBM C1000-130 practice questions. These free demo questions are parts of the C1000-130 exam questions. Download and read them carefully, you will find that the C1000-130 test questions of QuestionsTube will be your great learning materials online. Share some C1000-130 exam online questions below.

1.Red Hat OpenShift GitOps organizes the deployment process around repositories.

P.S. Free 2025 IBM C1000-130 dumps are available on Google Drive shared by TestInsides: <https://drive.google.com/open?id=1DCySyZZ414BZ-G5XdOkpDfFSE5pLPXnC>

As the saying goes, time is the most precious wealth of all wealth. If you abandon the time, the time also abandons you. So it is also vital that we should try our best to save our time, including spend less time on preparing for exam. Our C1000-130 guide torrent will be the best choice for you to save your time. The three different versions have different functions. If you decide to buy our C1000-130 Test Guide, the online workers of our company will introduce the different function to you. You will have a deep understanding of the three versions of our C1000-130 exam questions. We believe that you will like our products.

By passing the IBM C1000-130 Exam, professionals can demonstrate their expertise in the administration of IBM Cloud Pak for Integration. IBM Cloud Pak for Integration V2021.2 Administration certification can help professionals to advance their careers and increase their earning potential. Additionally, it can help organizations to identify individuals who have the necessary skills to effectively manage IBM Cloud Pak for Integration.

C1000-130 Valid Exam Cram, Test C1000-130 Simulator

With the unemployment rising, large numbers of people are forced to live their job. It is hard to find a high salary job than before. Many people are immersed in updating their knowledge. So people are keen on taking part in the C1000-130 exam. As you know, the competition between candidates is fierce. If you want to win out, you must master the knowledge excellently. Now our C1000-130 Study Materials are your best choice. With the assistance of our study materials, you will advance quickly.

IBM Cloud Pak for Integration V2021.2 Administration exam or the IBM C1000-130 is a certification that assesses an individual's knowledge and skills in administering the IBM Cloud Pak for Integration. C1000-130 exam validates the candidate's expertise in configuring, maintaining, and troubleshooting IBM Cloud Pak for Integration components. The IBM Cloud Pak for Integration is an enterprise-grade integration solution that offers a collection of system integrations capabilities to modernize heterogeneous IT landscapes.

IBM Cloud Pak for Integration V2021.2 Administration Sample Questions (Q56-Q61):

NEW QUESTION # 56

When considering storage for a highly available single-resilient queue manager, which statement is true?

- A. To tolerate an outage of an entire availability zone, cloud storage which replicates across two other zones must be used.
- B. Persistent volumes are not supported for a resilient queue manager.
- C. A single resilient queue manager takes much longer to recover than a multi instance queue manager
- D. A shared file system must be used that provides data write integrity, granting exclusive access to file and release locks on failure.

Answer: D

Explanation:

In IBM Cloud Pak for Integration (CP4I) v2021.2, when deploying a highly available single-resilient queue manager, storage considerations are crucial to ensuring fault tolerance and failover capability.

A single-resilient queue manager uses a shared file system that allows different queue manager instances to access the same data, enabling failover to another node in the event of failure. The key requirement is data write integrity, ensuring that only one instance has access at a time and that locks are properly released in case of a node failure.

Option A is correct: A shared file system must support data consistency and failover mechanisms to ensure that only one instance writes to the queue manager logs and data at any time. If the active instance fails, another instance can take over using the same storage.

Option B is incorrect: While cloud storage replication across availability zones is useful, it does not replace the need for a proper shared file system with write integrity.

Option C is incorrect: Persistent volumes are supported for resilient queue managers when deployed in Kubernetes environments like OpenShift, as long as they meet the required file system properties.

Option D is incorrect: A single resilient queue manager can recover quickly by failing over to a standby node, often faster than a multi-instance queue manager, which requires additional failover processes.

Given the output of the command, what is the state of the API Connect components?

- A. Developer Portal sites will be unresponsive.
- **B. New API calls will be rejected by the gateway service.**
- C. Automated API behavior testing has failed.
- D. The Analytics subsystem cannot retain historical data.

Answer: B

NEW QUESTION # 58

OpenShift supports forwarding cluster logs to which external third-party system?

- A. Apache Solr.
- **B. Kafka Broker.**
- C. Apache Lucene.
- D. Splunk.

Answer: B

NEW QUESTION # 59

What protocol is used for secure communications between the IBM Cloud Pak for Integration module and any other capability modules installed in the cluster using the Platform Navigator?

- A. SSH
- B. TLS
- C. SSL
- **D. HTTP**

Answer: D

Explanation:

In IBM Cloud Pak for Integration (CP4I) v2021.2, secure communication between the Platform Navigator and other capability modules (such as API Connect, MQ, App Connect, and Event Streams) is essential to maintain data integrity and confidentiality. The protocol used for secure communications between CP4I modules is Transport Layer Security (TLS).

Why TLS is Used for Secure Communications in CP4I?

Encryption: TLS encrypts data during transmission, preventing unauthorized access.

Authentication: TLS ensures that modules communicate securely by verifying identities using certificates.

Data Integrity: TLS protects data from tampering while in transit.

Industry Standard: TLS is the modern, secure successor to SSL and is widely adopted in enterprise security.

By default, CP4I services use TLS 1.2 or higher, ensuring strong encryption for inter-service communication within the OpenShift cluster.

Why Answer D (TLS) is Correct?

IBM Cloud Pak for Integration enforces TLS-based encryption for internal and external communications.

TLS provides a secure channel for communication between Platform Navigator and other CP4I components.

It is the recommended protocol over SSL due to security vulnerabilities in older SSL versions.

Explanation of Incorrect Answers:

A . SSL → Incorrect

SSL (Secure Sockets Layer) is an older protocol that has been deprecated due to security flaws.

CP4I uses TLS, which is the successor to SSL.

B . HTTP → Incorrect

HTTP is not secure for internal communication.

CP4I uses HTTPS (HTTP over TLS) for secure connections.

C . SSH → Incorrect

SSH (Secure Shell) is used for remote administration, not for service-to-service communication within CP4I.

CP4I services do not use SSH for inter-service communication.

NEW QUESTION # 60

Which statement is true about the Authentication URL user registry in API Connect?

- A. It authenticates users defined in a provider organization.
- B. It authenticates Developer Portal sites.
- **C. It authenticates users by referencing a custom identity provider.**
- D. It authenticates Cloud Manager users.

Answer: C

Explanation:

In IBM API Connect, an Authentication URL user registry is a type of user registry that allows authentication by delegating user verification to an external identity provider. This is typically used when API Connect needs to integrate with custom authentication mechanisms, such as OAuth, OpenID Connect, or SAML-based identity providers.

When configured, API Connect does not store user credentials locally. Instead, it redirects authentication requests to the specified external authentication URL, and if the response is valid, the user is authenticated.

Why Answer D is Correct:

The Authentication URL user registry is specifically designed to reference an external custom identity provider.

This enables API Connect to integrate with external authentication systems like LDAP, Active Directory, OAuth, and OpenID Connect.

It is commonly used for single sign-on (SSO) and enterprise authentication strategies.

Explanation of Incorrect Answers:

A . It authenticates Developer Portal sites. → Incorrect

The Developer Portal uses its own authentication mechanisms, such as LDAP, local user registries, and external identity providers, but the Authentication URL user registry does not authenticate Developer Portal users directly.

B . It authenticates users defined in a provider organization. → Incorrect Users in a provider organization (such as API providers and administrators) are typically authenticated using Cloud Manager or an LDAP-based user registry, not via an Authentication URL user registry.

C . It authenticates Cloud Manager users. → Incorrect

Cloud Manager users are typically authenticated via LDAP or API Connect's built-in user registry.

The Authentication URL user registry is not responsible for Cloud Manager authentication.
