As the old saying goes people change with the times. People must constantly update their stocks of knowledge and improve their practical ability. Passing the test Fire-Inspector-II certification can help you achieve that and buying our Fire-Inspector-II test practice dump can help you pass the test smoothly. Our Fire-Inspector-II study question is superior to other same kinds of study materials in many aspects. Our products' test bank covers the entire syllabus of the test and all the possible questions which may appear in the test. Each question and answer has been verified by the industry experts. The research and production of our Fire-Inspector-II Exam Questions are undertaken by our first-tier expert team.

You may think choosing practice at the first time is a little bit like taking gambles. However, you can be assured by our Fire-Inspector-II learning quiz with free demos to take reference, and professional elites as your backup. Accuracy rate is unbelievably high and helped over 98 percent of exam candidates pass the exam. By imparting the knowledge of the Fire-Inspector-II Exam to those ardent exam candidates who are eager to succeed like you, they treat it as responsibility to offer help. So please prepare to get striking progress if you can get our Fire-Inspector-II study guide with following traits for your information

Latest Fire-Inspector-II Test Online | Latest Fire-Inspector-II Test Format

It is indeed not easy to make a decision. Fire-Inspector-II study engine is willing to give you a free trial. If you have some knowledge of our Fire-Inspector-II training materials, but are not sure whether it is suitable for you, you can email us to apply for a free trial version. You know, we have provided three versions of Fire-Inspector-II practice quiz: the PDF, Software and APP online. Accordingly, we have three free trial versions as well.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q61-Q66):

NEW QUESTION # 61

Churches, schools, apartment dwellings, and mercantile structures are commonly built using what type of construction?

- A. Type I
- B. Type IV
- **C. Type III**
- D. Type II

Answer: C

Explanation:

Understanding Type III Construction

According to the International Building Code (IBC) 2021, Section 602.3, Type III construction is a mix of noncombustible and combustible materials.

Exterior walls must be noncombustible or fire-retardant-treated wood, while interior structural elements (such as floors, roofs, and partitions) can be wood.

2. Common Uses of Type III Construction

Churches, schools, apartment buildings, and mercantile (retail) structures are often built using Type III construction because it balances fire resistance with cost-effectiveness.

Many low-rise residential and commercial buildings use this type due to its ability to support multiple stories while maintaining some fire protection.

3. Verification of Other Options

Option A (Type I) - Incorrect, as Type I construction is entirely noncombustible (steel/concrete) and used for high-rises, not typical for churches, schools, or apartments.

Option B (Type II) - Incorrect, as Type II construction is fully noncombustible but has lower fire resistance than Type I, mainly used for commercial buildings, warehouses, and low-rise offices.

Option D (Type IV) - Incorrect, as Type IV (heavy timber) is rarely used for schools and apartments, though some older churches may use it.

Reference Sources:

International Building Code (IBC) 2021 - Section 602.3 (Type III Construction Definition) NFPA 220: Standard on Types of Building Construction ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: C. Type III. #

NEW QUESTION # 62

The clearance requirement from structures for open burning may be reduced to a minimum of ____ ft. from a structure when the burning is conducted in an approved container.

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

For open burning, fire codes typically require a minimum clearance from structures to prevent fire spread.

However, when burning is conducted in an approved container, the required clearance distance may be reduced to 15 feet.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 307.4 (Open Burning, Recreational Fires, and Portable Outdoor Fireplaces) IFC 307.4 states that the minimum clearance for open burning is 50 feet but may be reduced to 15 feet when conducted in an approved container that prevents fire spread.

2. NFPA 1 - Fire Code (2021 Edition) - Section 10.11 (Open Burning and Recreational Fires) NFPA 1, Section 10.11.5 aligns with the IFC and allows a minimum of 15 feet clearance for contained burning in approved receptacles.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 10 ft. is too close and does not meet the IFC minimum requirement.

Option B (Correct): 15 ft. is the minimum required distance for burning in an approved container according to IFC 307.4.

Option C (Incorrect): 25 ft. is the standard for recreational fires but not for approved containers.

Option D (Incorrect): 50 ft. applies to open burning without a container, not when using an approved container.

Thus, the correct and verified answer is: B. 15 ft.

NEW QUESTION # 63

Given: A local college student inquires about the use of candles in their dorm room. Candles:

- A. may be used in a sprinklered dormitory.
- **B. may not be used.**
- C. must be kept a minimum 36 in. from combustibles.
- D. must be kept a minimum 12 in. from combustibles.

Answer: B

Explanation:

Reference to ICC Fire Code Regulations:

According to the International Fire Code (IFC) Section 308.1.5 (2021 Edition), the use of open-flame devices, including candles, is prohibited in dormitories, sleeping rooms, and similar occupancies unless specifically approved by the fire code official. The regulation exists to prevent fire hazards in areas with high occupant density and potentially limited egress routes.

Fire Safety Concerns in Dormitories:

Dormitories typically contain highly combustible materials such as bedding, curtains, and furniture, making them susceptible to rapid fire spread.

The presence of multiple residents in a shared living space increases the risk of fire-related casualties.

Even in sprinklered buildings, candles pose an unnecessary ignition risk that could endanger occupants before the activation of fire suppression systems.

Clarification of Incorrect Answer Choices:

B: may be used in a sprinklered dormitory # Incorrect

While fire sprinklers help control fires, they do not prevent ignition, and the prohibition still applies regardless of sprinkler systems.

C: must be kept a minimum of 12 inches from combustibles # Incorrect

This rule applies to general open-flame devices in some circumstances but does not override the outright ban on candles in dormitories.

D: must be kept a minimum of 36 inches from combustibles # Incorrect

Similar to option C, maintaining a distance from combustibles does not exempt candles from being prohibited in dormitory settings.

Conclusion:

The correct and verified answer is A (Candles may not be used) based on the International Fire Code (IFC) Section 308.1.5, ensuring fire safety compliance in dormitory settings.

NEW QUESTION # 64

Which of the following situations requires securing of an operational permit from the code official prior to commencing the related activity?

- **A. Storing 85,000 bd. ft. of lumber.**
- B. Inside storage of 100 cu. ft. of baled cotton.
- C. Organic coating production facility producing 2 gallons per day.
- D. Fruit ripening operations using carbon dioxide gas.

Answer: A

Explanation:

IFC Section 105.6 lists activities requiring operational permits. For A, lumber storage exceeding 100,000 board feet (bd. ft.) indoors or outdoors requires a permit (Section 105.6.28, Lumber Yards), but local thresholds may be lower-85,000 bd. ft. is close to this limit and likely exceeds typical exempt amounts, triggering a permit in many jurisdictions. For B, IFC Table 3206.2 allows small quantities of combustible commodities like baled cotton (100 cu. ft. is minimal) without a permit unless part of a larger high-piled storage operation. For C, fruit ripening with CO₂ (Section 105.6.13) requires a permit only for specific flammable gases, not CO₂ alone, which is nonflammable. For D, organic coating production (Section 105.6.33) requires a permit only above 1 gallon per day, but 2 gallons is still small-scale and context-dependent-lumber storage is the clearer permit trigger here. Thus, A is the best answer.

NEW QUESTION # 65

The minimum fire-flow for a 3,700-sq. ft. two-family dwelling of Type VB construction with a sprinkler system is ____ GPM.

- A. 1,750
- B. 1,313
- **C. 1,000**
- D. 0

Answer: C

Explanation:

Fire flow for residential buildings is determined based on IFC Appendix B, Table B105.1(1) - Required Fire Flow for One- and Two-Family Dwellings, Group R-3, and R-4 Buildings.

For a 3,700 sq. ft. two-family dwelling of Type VB construction:

Per Table B105.1(1), the baseline fire flow is 1,750 gpm.

If an NFPA 13D-compliant automatic sprinkler system is installed, the fire flow is reduced by 50%.

1,750 gpm \times 0.50 = 875 gpm, but the minimum allowed for a sprinklered dwelling is 1,000 gpm.

NEW QUESTION # 66

.....

For candidates who choose Fire-Inspector-II test materials for the exam, the quality must be one of most important standards for consideration. We have a professional team to collect the first-rate information for the exam, and we also have reliable channel to ensure you that Fire-Inspector-II exam braindumps you receive is the latest one. We are strict with the quality and answers, and Fire-Inspector-II Exam Materials we offer you is the best and the latest one. In addition, we provide you with free update for 365 days, so that you can know the latest information for the exam, and the latest version for Fire-Inspector-II training materials will be sent to your email address automatically.

Latest Fire-Inspector-II Test Online: <https://www.practicematerial.com/Fire-Inspector-II-exam-materials.html>

If you want to pass the Fire-Inspector-II exam, our Fire-Inspector-II practice questions are elemental exam material you cannot miss, 100% Pass Guaranteed or Full Refund PracticeMaterial Fire-Inspector-II braindumps can ensure you a passing score in the test, Free of virus for our Latest Fire-Inspector-II Test Online - 67 - Fire Inspector II Exam practice material, Perhaps you are deeply bothered by preparing the Fire-Inspector-II exam.

Users with portable Macs also appreciate the fact that TextEdit works entirely Fire-Inspector-II from memory, accessing the hard drive only to read and write files, Which service converts private IP addresses to public IP addresses?
