Topic 4	Cybersecurity: Cybersecurity, also known as IT security or computer security, involves safeguarding computer systems, networks, and data from unauthorized access, theft, damage, or disruption to ensure the integrity and availability of digital information.

Reliable ISO-IEC-27001-Foundation Exam Labs, ISO-IEC-27001-Foundation Test Preparation

According to the statistic about candidates, we find that some of them take part in the APMG-International exam for the first time. Considering the inexperience of most candidates, we provide some free trial for our customers to have a basic knowledge of the ISO-IEC-27001-Foundation exam guide and get the hang of how to achieve the ISO-IEC-27001-Foundation Exam Certification in their first attempt. You can download a small part of PDF demo, which is in a form of questions and answers relevant to your coming ISO-IEC-27001-Foundation exam; and then you may have a decision about whether you are content with it. Our ISO-IEC-27001-Foundation exam questions are worthy to buy.

APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which activity is a required element of information security risk identification?

- A. Prioritize the risk for treatment
- B. Consider the likelihood of the occurrence
- **C. Determine the risk owners**
- D. Determine the level of risk

Answer: C

Explanation:

Clause 6.1.2 defines the mandatory elements of risk assessment. Under risk identification, the standard requires: "identifies the information security risks:1) apply the information security risk assessment process to identify risks...; and2) identify the risk owners." By contrast, considering likelihood and determining levels of risk (options B and D) are part of risk analysis(6.1.2 d) "assess the realistic likelihood..."; "determine the levels of risk"), and prioritization for treatment (option C) is part of risk evaluation(6.1.2 e) "prioritize the analysed risks for risk treatment"). Therefore, the specific activity that belongs to risk identification is to identify the risk owners. This sequencing is prescribed to ensure each risk has a designated owner responsible for decisions on treatment and acceptance downstream.

NEW QUESTION # 21

What activity is done first when preparing for an initial certification audit?

- **A. Agree the scope of the ISMS with the Certification Body auditor**
- B. Provide evidence that nonconformities from an internal audit have been actioned
- C. Provide documents to the Certification Body auditor for the Stage 1 audit
- D. Provide records to the Certification Body auditor for the Stage 2 audit

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27001:2022 standards and certification guidance: Before a certification audit can begin, the scope of the ISMS must be clearly defined and agreed with the Certification Body. ISO/IEC 27001 Clause 4.3 requires: "The scope shall be available as documented information." Certification Bodies require this scope statement to plan audit duration, resources, and coverage. Only after the scope is agreed does the Stage 1 audit begin, which reviews documented information and readiness. Stage 2 focuses on implementation and effectiveness. Evidence of corrective actions (C) is checked at Stage 2 if issues were identified earlier. Records provision (D) occurs during Stage 2, not first. Thus, the first step in preparing for certification is A: Agreeing the scope of the ISMS with the Certification Body auditor.

NEW QUESTION # 22

Which statement is a factor that will influence the implementation of the information security management system?

- A. The ISMS will encompass all controls specified within ISO/IEC 27001
- B. The ISMS will be separate from the organization's overall management structure

- C. The ISMS will be scaled to the controls according to the needs of the organization
- D. The ISMS will be operated as an independent process within the organization

Answer: C

Explanation:

ISO/IEC 27001 makes clear that the ISMS is intended to be tailored to the organization. The standard states: "This document also includes requirements for the assessment and treatment of information security risks tailored to the needs of the organization. The requirements set out in this document are generic and are intended to be applicable to all organizations regardless of type, size or nature." This means implementation is scaled based on each organization's risk, context, and needs, not a fixed one-size-fits-all set of activities or controls. Clause 6.1.3 further reinforces that control selection is flexible and risk-driven: "Organizations can design controls as required or identify them from any source," and "Annex A contains a list of possible information security controls... The information security controls listed in Annex A are not exhaustive and additional information security controls can be included if needed." Together, these extracts verify that the ISMS implementation is influenced by and scaled to the organization's needs and selected controls, not separated from management processes (A, D) nor mandated to include "all controls" (B).

NEW QUESTION # 23

Which information is required to be included in the Statement of Applicability?

- A. The scope and boundaries of the ISMS
- B. The risk assessment approach of the organization
- C. The criteria against which risk will be evaluated
- D. The justification for including each information security control

Answer: D

Explanation:

Clause 6.1.3 (d) requires that the organization "produce a Statement of Applicability that contains the necessary controls (see Annex A), and justification for inclusions, whether they are implemented or not, and the justification for exclusions." This is the defining requirement of the SoA: it documents which Annex A controls are relevant, which are implemented, and the justification for inclusion/exclusion. While the ISMS scope (A) is documented in Clause 4.3, and risk evaluation criteria (C) are defined in Clause 6.1.2, these do not belong in the SoA. The SoA does not describe the full risk assessment approach (B); that is part of the risk assessment methodology.

Therefore, the mandatory requirement for the SoA is justification for including (or excluding) each information security control.

NEW QUESTION # 24

What is the name of the control clause used to control information security breaches within Annex A of ISO/IEC 27001?

- A. Response to information security events
- B. Information security event management
- C. Information security event reporting
- D. Reporting information security incidents

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A in ISO/IEC 27001 refers directly to ISO/IEC 27002 for control guidance. In ISO/IEC 27002:2022, Clause 6.8 is titled: "Information security event reporting - Information security events should be reported through appropriate management channels as quickly as possible." This control ensures breaches, incidents, or suspected issues are reported for action. The other options (B, C, D) are not the exact titles in Annex A. The official title is Information security event reporting, confirming

NEW QUESTION # 25
