

HOT NSE8_812 Knowledge Points 100% Pass | The Best Valid Braindumps Fortinet NSE 8 - Written Exam (NSE8_812) Book Pass for sure

2025 Latest GetValidTest NSE8_812 PDF Dumps and NSE8_812 Exam Engine Free Share: <https://drive.google.com/open?id=1JHs4GE2smJ7L0c8tcEoUTyrgYYZPQKgk>

After studying with our NSE8_812 practice engine, as our loyal customers wrote to us that they are now more efficient than their colleagues, so they have received more attention from their leaders and got the promotion on both incomes and positions. We are all ordinary professional people. We must show our strength to show that we are worth the opportunity. And with the help of our NSE8_812 Exam Braindumps, they all proved themselves and got their success. Just buy our NSE8_812 learning guide, you will be one of them too!

The NSE8_812 certification exam is a 2-hour exam consisting of 60 multiple-choice questions. NSE8_812 exam covers a range of topics such as Fortinet Security Fabric, FortiGate Security Platforms, and Fortinet Security Services. NSE8_812 exam is designed to test your knowledge and understanding of advanced security concepts and your ability to apply them in real-world scenarios. To pass the exam, you must achieve a minimum score of 70%.

Fortinet NSE8_812 Exam is a challenging exam that requires individuals to have a deep understanding of network security concepts and technologies. NSE8_812 exam is designed to test both theoretical knowledge and practical skills, and it is recommended that individuals have at least five years of experience in network security before attempting the exam.

GetValidTest Fortinet NSE8_812 exam information is proven. We can provide the questions based on extensive research and experience. GetValidTest has more than 10 years experience in IT certification NSE8_812 exam training, including questions and answers. On the Internet, you can find a variety of training tools. GetValidTest NSE8_812 Exam Questions And Answers is the best training materials. We offer the most comprehensive verification questions and answers, you can also get a year of free updates.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q13-Q18):

NEW QUESTION # 13

Refer to The exhibit showing a FortiEDR configuration.

SECURITY POLICIES

Clone Policy Set Mode Assign Collector Group Delete

✓ All POLICY NAME

D ✓	Execution Prevention	FORTINET	ON
D ✓	Exfiltration Prevention	FORTINET	ON
D ✓	Ransomware Prevention	FORTINET	ON
D ✓	Device Control	FORTINET	OFF
D ✓	extended Detection Policy	FORTINET	OFF

FORTINET

Based on the exhibit, which statement is correct?

- A. If a malicious file is executed and attempts to establish a connection it will generate duplicate events.
- B. The presence of a cryptolocker malware at rest on the filesystem will be detected by the Ransomware Prevention security policy.
- C. If an unresolved file rule is triggered, by default the file is logged but not blocked.
- D. FortiEDR Collector will not collect OS Metadata.

Answer: C

NEW QUESTION # 14

Refer to the exhibit, which shows a Branch1 configuration and routing table.

```

Branch1 # show system sdwan
config system sdwan
    set status enable
    set load-balance-mode source-dest-ip-based
config zone
    edit "internet"
    next
    edit "overlay"
    next
end
config members
    edit 1
        set interface "wan1"
        set zone "internet"
    next
    edit 2
        set interface "wan2"
        set zone "internet"
    next
    edit 3
        set interface "vpnl-net"
        set zone "overlay"
    next
    edit 4
        set interface "vpn2-mpls"
        set zone "overlay"
    next
end
config service
end
end

#####
Branch1 # show router static
config router static
    edit 0
        set distance 1
        set sdwan-zone "internet" "overlay"
    next
end

#####
Branch1 # get router info routing-table all
Codes: K - kernel, C - connected, S - static, R - RIP, B - BGP
      O - OSPF, IA - OSPF inter area
      N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type
2
      E1 - OSPF external type 1, E2 - OSPF external type 2
      i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS
inter area
      * - candidate default

Routing table for VRF=0
S*      0.0.0.0/0  [1/0] via 10.198.1.1, wan1, [1/0]
          [1/0] via 10.198.2.1, wan2, [1/0]
          [1/0] via vpnl-net tunnel 10.198.5.2, [1/0]
          [1/0] via vpn1-mpls tunnel 10.198.6.2, [1/0]
C      10.1.1.0/24 is directly connected, port3
...

```

In the SD-WAN implicit rule, you do not want the traffic load balance for the overlay interface when all members are available. In this scenario, which configuration change will meet this requirement?

- A. Configure the cost in each overlay member to 10.

- B. Create a new static route with the internet sdwan-zone only
- C. Change the load-balance-mode to source-ip-based.
- D. **Configure the priority in each overlay member to 10.**

Answer: D

Explanation:

The default load balancing mode for the SD-WAN implicit rule is source IP based. This means that traffic will be load balanced evenly between the overlay members, regardless of the member's priority.

To prevent traffic from being load balanced, you can configure the priority of each overlay member to 10.

This will make the member ineligible for load balancing.

The other options are not correct. Changing the load balancing mode to source-IP based will still result in traffic being load balanced. Creating a new static route with the internet sdwan-zone only will not affect the load balancing of the overlay interface. Configuring the cost in each overlay member to 10 will also not affect the load balancing, as the cost is only used when the implicit rule cannot find a match for the destination IP address.

Option	Description
Change the load-balance-mode to source-ip-based	Will still result in traffic being load balanced.
Create a new static route with the internet sdwan-zone only	Will not affect the load balancing of the overlay interface.
Configure the cost in each overlay member to 10	Will not affect the load balancing, as the cost is only used when the implicit rule cannot find a match for the destination IP address.
Configure the priority in each overlay member to 10	Will prevent traffic from being load balanced.

NEW QUESTION # 15

Refer to the exhibits.

Configuration

```
** HQ CONFIGURATION **

config router prefix-list
  edit "route-in"
    config rule
      edit 1
        set prefix 172.16.201.0 255.255.255.0
        set ge 25
        set le 28
      next
      edit 2
        set prefix 172.16.204.0 255.255.255.0
        set ge 23
        set le 25
      next
    end
  next
end
config router bgp
  set as 64511
  set router-id 1.1.1.1
  config neighbor
    edit "10.10.102.87"
      set soft-reconfiguration enable
      set prefix-list-in "route-in"
      set remote-as 64512
    next
  end
end
```

A customer has deployed a FortiGate with iBGP and eBGP routing enabled. HQ is receiving routes over eBGP from ISP 2; however, only certain routes are showing up in the routing table-Assume that BGP is working perfectly and that the only possible modifications to the routing table are solely due to the prefix list that is applied on HQ.

Given the exhibits, which two routes will be active in the routing table on the HQ firewall? (Choose two.)

- A. 172.16.201.96/29
- B. 172.620.64.27
- C. 172.16.204.128/25
- D. 172.16.204.64/27

Answer: C,D

Explanation:

The prefix list in the exhibit is configured to match prefixes that are either in the 172.16.204.0/24 subnet or in the 172.62.0.0/16 subnet. The routes that match these prefixes will be active in the routing table on the HQ firewall.

The routes that match the following prefixes will not be active in the routing table:

172.16.201.96/29

172.62.0.64/27

These routes do not match the criteria set by the prefix list.

NEW QUESTION # 16

A customer is planning on moving their secondary data center to a cloud-based IaaS. They want to place all the Oracle-based systems Oracle Cloud, while the other systems will be on Microsoft Azure with ExpressRoute service to their main data center. They have about 200 branches with two internet services as their only WAN connections. As a security consultant you are asked to

design an architecture using Fortinet products with security, redundancy and performance as a priority. Which two design options are true based on these requirements? (Choose two.)

- A. Use FortiGate VM for IPSEC over ExpressRoute, as traffic is not encrypted by Azure.
- B. Two ExpressRoute services to the main data center are required to implement SD-WAN between a FortiGate VM in Azure and a FortiGate device at the data center edge
- C. Systems running on Azure will need to go through the main data center to access the services on Oracle Cloud.
- D. Branch FortiGate devices must be configured as VPN clients for the branches' internal network to be able to access Oracle services without using public IPs.

Answer: A,B

Explanation:

To secure the traffic between Azure and the main data center, a FortiGate VM can be deployed in Azure and configured to use IPSEC over ExpressRoute, as traffic is not encrypted by Azure by default. This also allows the use of Fortinet security features such as antivirus, IPS, web filtering, and application control. To implement SD-WAN between Azure and the main data center, two ExpressRoute services are required to provide redundant paths and load balancing. A FortiGate device at the data center edge can be configured to use SD-WAN rules to select the best path based on performance, availability, and cost. Reference:
<https://docs.fortinet.com/document/fortigate/6.4.0/cookbook/103440/ipsec-vpn-between-fortigate-and-azure>
<https://docs.fortinet.com/document/fortigate/6.4.0/cookbook/103441/sd-wan-between-fortigate-and-azure>

NEW QUESTION # 17

An administrator has configured a FortiGate device to authenticate SSL VPN users using digital certificates. A FortiAuthenticator is the certificate authority (CA) and the Online Certificate Status Protocol (OCSP) server.

Part of the FortiGate configuration is shown below:

```
set certificate setting
  set ocsp-status enable
  set ocsp-default-server "FortiAuthenticator"
  set ocsp-option certificate
  set strict-ocsp-check enable
end

config user peer
  edit _any
    set ca CA_Cert
    set ldap-server Training-Lab
    set ldap-mode principal-name
  next

config user group
  edit "SSLVPN_Users"
    set member "_any"
  next
```

Based on this configuration, which two statements are true? (Choose two.)

- A. If the OCSP server is unreachable, authentication will succeed if the certificate matches the CA.
- B. OCSP checks will always go to the configured FortiAuthenticator
- C. The OCSP check of the certificate can be combined with a certificate revocation list.
- D. OCSP certificate responses are never cached by the FortiGate.

Answer: A,C

Explanation:

B is correct because the OCSP check of the certificate can be combined with a certificate revocation list (CRL). This means that the

FortiGate will check the OCSP server to see if the certificate has been revoked, and it will also check the CRL to see if the certificate has been revoked.

D is correct because if the OCSP server is unreachable, authentication will succeed if the certificate matches the CA. This is because the FortiGate will fall back to using the CRL if the OCSP server is unreachable.

The other options are incorrect. Option A is incorrect because OCSP checks can go to other OCSP servers, not just the FortiAuthenticator. Option C is incorrect because OCSP certificate responses can be cached by the FortiGate.
