Well-known 300-715 Practice Engine Sends You the Best Training Dumps - ExamcollectionPass

You shall prepare yourself for the Implementing and Configuring Cisco Identity Services Engine (300-715) exam, take the Implementing and Configuring Cisco Identity Services Engine (300-715) practice exams well, and then attempt the final 300-715 test. So, start your journey by today, get the ExamcollectionPass Implementing and Configuring Cisco Identity Services Engine (300-715) study material, and study well. No one can keep you from rising as a star in the sky.

Cisco Identity Services Engine (ISE) is a comprehensive security solution that provides secure access to network resources. Cisco ISE allows for the creation and enforcement of security policies across the network, ensuring that only authorized users and devices are granted access. The Cisco 300-715 Certification Exam covers the configuration and implementation of Cisco ISE, including the integration of third-party products and solutions.

Cisco Implementing and Configuring Cisco Identity Services Engine Sample Questions (Q40-Q45):

NEW QUESTION # 40

An administrator is migrating device administration access to Cisco ISE from the legacy TACACS+ solution that used only privilege 1 and 15 access levels. The organization requires more granular controls of the privileges and wants to customize access levels 2-5 to correspond with different roles and access needs. Besides defining a new shell profile in Cisco ISE, What must be done to accomplish this configuration?

- A. Enable the privilege levels in Cisco ISE
- B. Define the command privileges for levels 2-5 in the IOS devices
- C. Enable the privilege levels in the IOS devices
- D. Define the command privileges for levels 2-5 in Cisco ISE

Answer: D

Explanation:

Cisco ISE is a network access control (NAC) solution that provides centralized authentication, authorization, and accounting (AAA) for network devices. It can be used to define different privilege levels for different users or groups of users, and to restrict access to specific commands based on the privilege level.

In this case, the organization wants to customize the privilege levels 2-5 to correspond with different roles and access needs. This can be done by defining the command privileges for these levels in Cisco ISE.

NEW QUESTION # 41

What happens when an internal user is configured with an external identity store for authentication, but an engineer uses the Cisco ISE admin portal to select an internal identity store as the identity source?

- A. Authentication is granted.
- B. Authentication is redirected to the external identity source.
- C. Authentication is redirected to the internal identity source.
- D. Authentication fails.

Answer: D

Explanation:

If an internal user is configured with an external identity store for authentication, while logging in to the ISE Admin portal, the internal user must select the external identity store as the Identity Source. Authentication will fail if Internal Identity Source is selected.

NEW QUESTION # 42

A network engineer is configuring Cisco TrustSec and needs to ensure that the Security Group Tag is being transmitted between two devices. Where in the Layer 2 frame should this be verified?

- A. 802.1Q field
- B. CMD field
- C. Payload
- D. 802.1 AE header

Answer: B

Explanation:

NEW QUESTION # 43

Which Cisco ISE deployment model provides redundancy by having every node in the deployment configured with the Administration, Policy Service, and Monitoring personas to protect from a complete node failure?

- A. dispersed
- B. two-node
- C. distributed

- D. hybrid

Answer: C

Explanation:

Only 2 deployments type for Cisco ISE: Standalone, and Distributed ISE Deployments.

Distributed deployments can have several scenarios:

- Small Network Deployments
- Medium-Sized Network Deployments
- Large Network Deployments

NEW QUESTION # 44

Drag and Drop Question

An engineer needs to export a file in CSV format, encrypted with the password C1\$c0438563935, and contains users currently configured in Cisco ISE. Drag and drop the steps from the left into the sequence on the right to complete this task.

Click Export Selected, click Key, and enter the password.	1
Click Administration, and then click Identity Management.	2
Click Start Export, and then click OK.	3
Click Identities, click Users, and then select the list of users.	4

Answer:

Explanation:

Click Administration, and then click Identity Management.
Click Identities, click Users, and then select the list of users.
Click Export Selected, click Key, and enter the password.
Click Start Export, and then click OK.
