PL-400 Sure Pass & Reliable PL-400 Test Sims

The Dumpkiller offers three formats for applicants to practice and prepare for the Microsoft Power Platform Developer (PL-400) exam as per their needs. The pdf format of Dumpkiller is portable and can be used on laptops, tablets, and smartphones. Print real Microsoft Power Platform Developer (PL-400) exam questions in our PDF file. The pdf is user-friendly and accessible on any smart device, allowing applicants to study from anywhere at any time.

Microsoft PL-400 Certification Exam is a role-based exam that focuses on the skills and expertise required to become a Power Platform Developer. PL-400 exam consists of multiple-choice questions and is designed to test the developers' knowledge of Power Platform and related technologies. PL-400 exam is divided into several sections, including designing and developing Power Apps, creating and managing Power Automate flows, building and managing Power BI reports, and creating and managing Power Virtual Agents. PL-400 Exam also covers topics such as data modeling, integration, and security.

Microsoft Power Platform Developer Sample Questions (Q282-Q287):

NEW QUESTION # 282

You work for a staffing company that helps employees fill temporary jobs. Available temporary jobs are categorized and listed on a secure area of the company's website.

The company wants to eliminate manual work that relates to job and candidate management. The company plans to invite employers with available jobs and job candidates to view jobs by sending personalized invitations. The company identifies the following requirements:

- * Human resources team members from the staffing company must be able to access the jobs listing and post available positions.
- * Employers seeking temporary employees must also be able to access the jobs listing and post available positions.
- * Approved job candidates must be notified about new positions for which they are qualified.
- * Approved job candidate must have an option to accept a job assignment directly from a notification.

You need to perform a gap analysis against the features and capabilities of the Power Platform.

Which features should you implement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Feature
Create the job listings portal.	▼ Custom self-service portal for employers and a custom page for job candidates Custom self-service portal for both employers and job candidates Portal for job candidates and a custom self-service portal for employers Portal from blank for job candidates and employers
Create an app that lists available positions.	▼ Canvas app with push notifications Model-driven app with push notifications Portal app with push notifications
Create the app for employers who are seeking temporary employees.	▼ Entity from defined on the job custom entity Webform with target set to the job custom entity Web page defined on the job custom entity Web step with target set to the job custom entity
Create invitation parameters for job candidates.	▼ Configure a value for the Assigned to Account option only. Configure a value for the Execute Workflow on Redeeming Contact option only. Configure values for Assigned to Account and Execute Workflow on Redeeming Contact. Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.
Create invitation parameters for approved job candidates.	▼ Configure a value for the Assigned to Account option only. Configure a value for the Execute Workflow on Redeeming Contact option only. Configure values for Assigned to Account and Execute Workflow on Redeeming Contact. Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.

Answer:

Explanation:

Requirement	Feature
Create the job listings portal.	▼ - Custom self-service portal for employers and a custom page for job candidates - Custom self-service portal for both employers and job candidates - Portal for job candidates and a custom self-service portal for employers - Portal from blank for job candidates and employers
Create an app that lists available positions.	▼ - Canvas app with push notifications - Model-driven app with push notifications - Portal app with push notifications
Create the app for employers who are seeking temporary employees.	▼ - Entity form defined on the job custom entity - Webform with target set to the job custom entity - Web page defined on the job custom entity - Web step with target set to the job custom entity
Create invitation parameters for job candidates.	▼ - Configure a value for the Assigned to Account option only. - Configure a value for the Execute Workflow on Redeeming Contact option only. - Configure values for Assigned to Account and Execute Workflow on Redeeming Contact. - Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.
Create invitation parameters for approved job candidates.	▼ - Configure a value for the Assigned to Account option only. - Configure a value for the Execute Workflow on Redeeming Contact option only. - Configure values for Assigned to Account and Execute Workflow on Redeeming Contact. - Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.

Explanation

Requirement

Feature

Create the job listings portal.

- Custom self-service portal for employers and a custom page for job candidates
- Custom self-service portal for both employers and job candidates
- Portal for job candidates and a custom self-service portal for employers
- Portal from blank for job candidates and employers

Create an app that lists available positions.

- Canvas app with push notifications
- Model-driven app with push notifications
- Portal app with push notifications

Create the app for employers who are seeking temporary employees

- Entity form defined on the job custom entity
- Webform with target set to the job custom entity
- Web page defined on the job custom entity
- Web step with target set to the job custom entity

Create invitation parameters for job candidates.

- Configure a value for the Assigned to Account option only.
- Configure a value for the Execute Workflow on Redeeming Contact option only.
- Configure values for Assigned to Account and Execute Workflow on Redeeming Contact.
- Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.

Create invitation parameters for approved job candidates.

- Configure a value for the Assigned to Account option only.
- Configure a value for the Execute Workflow on Redeeming Contact option only.
- Configure values for Assigned to Account and Execute Workflow on Redeeming Contact.
- Leave both Assigned to Account and Execute Workflow on Redeeming Contact empty.

Box 1: Custom self-service portal for both employers and job candidates If you select an environment that contains customer engagement, you can create the following portals:

- * Customer self-service portal: A customer self-service portal enables customers to access self-service knowledge, support resources, view the progress of their cases, and provide feedback.
- * Partner portal: A partner portal allows every organization with resellers, distributors, suppliers, or partners to have real-time access to every stage of shared activities.
- * Employee self-service portal: An employee self-service portal creates an efficient and well-informed workforce by streamlining common tasks and empowering every employee with a definitive source of knowledge.

Box 2: Model-driven app with push notifications

Compared to canvas apps, model-driven apps in PowerApps are based on underlying data - specifically, the data stored in Common Data Service (CDS).

Box 3: Webform with target set to the job custom entity

Box 4: Configure a value for the Execute Workflow on Redeeming Contact option only.

Execute Workflow on Redeeming Contact: A workflow process to be executed when the invite is redeemed.

The workflow will be passed the redeeming contact as the primary entity.

Box 5: Configure the value for the Assigned to Account option only.

Assign to Account: An account record to be associated as the redeeming contact's parent customer when the invite is redeemed.

NEW QUESTION # 283

You need to implement visual hints in the custom connector.
What should you do? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.

- A. Extend the Open API definition of the Web API for the DataId parameter
- B. Extend the Open API definition of the Web API for the EnvironmentName parameter.
- C. In the custom connector, update the name of the policy template.
- D. In the custom connector, update the description for the DataId parameter.

Answer: A,D

NEW QUESTION # 284

You need to create an application to deploy to other pharmacies. What should you do?

- A. Write a Web API to move customizations.
- B. Recreate customizations in a new environment.
- C. Export the solution as a managed solution.
- D. Navigate to Customize the System and export everything to a managed solution.

Answer: D

NEW QUESTION # 285

A company is configuring Microsoft Power Virtual Agents and Power Automate flows that use model-driven apps. The company has a website that uses Power Pages. You create Power Virtual Agents bot topics. You must configure the following:

- * Use a bot on the website.
- * Create Bot Framework skills.
- * Create a support request from the bot without human interaction.

You need to configure the website.

Which applications should you configure?

To answer, drag the appropriate applications to the correct requirements. Each application may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Applications	Requirement	Application
Power Virtual Agents	Use a bot on the website.	
Power Pages	Create Bot Framework skills.	
Power Automate	Create support request from the bot.	
Power App		

Answer:

Explanation:

Applications	Requirement	Application
Power Virtual Agents	Use a bot on the website.	Power Pages
Power Pages	Create Bot Framework skills.	Power App
Power Automate	Create support request from the bot.	Power Virtual Agents
Power App		

Explanation

Applications

Power Virtual Agents
Power Pages
Power Automate
Power App

Answer Area**Requirement**

Use a bot on the website.
Create Bot Framework skills.
Create support request from the bot.

Application

Power Pages
Power App
Power Virtual Agents

**NEW QUESTION # 286**

A company has two development instances, two test instances, two staging instances, and one production instance.

The test team reports connection issues with the test and staging instances.

You need to identify which if the instances the testing team currently has access.

Which two URLs can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. <https://disco.crm.dynamics.com/api/discovery/v9.1/>
- B. [https://dev.crm.dynamics.com/api/discovery/v9.1/Instances\(UniqueName='myorg'\)](https://dev.crm.dynamics.com/api/discovery/v9.1/Instances(UniqueName='myorg'))
- C. <https://dev.crm.dynamics.com/api/discovery/v9.1/Instances>
- D. <https://globaldisco.crm.dynamics.com/api/discovery/v9.1/Instances>
- E. <https://myorg.api.crm.dynamics.com/api/data/v.9.1/>

Answer: B,D

Explanation:

Explanation

C: Organization information is stored in the Instance entity of the Discovery service. To see the kind of information contained in that entity, send an HTTP GET request to the service for one of your instances.

GET [https://dev.{servername}/api/discovery/v9.0/Instances\(UniqueName='myorg'\)](https://dev.{servername}/api/discovery/v9.0/Instances(UniqueName='myorg')) In the above example, the discovery service is used to obtain the organization information of the instance with a unique name of "myorg".
