2025 220-1101: Accurate CompTIA A+ Certification Exam: Core 1 Reliable Learning Materials

The web-based CompTIA 220-1101 Practice Exam is compatible with all operating systems, including Mac, Linux, iOS, Android, and Windows. It is a browser-based CompTIA A+ Certification Exam: Core 1 (220-1101) practice exam that works on all major browsers, including Chrome, Firefox, Safari, Internet Explorer, and Opera. This means that you won't have to worry about installing any complicated software or plug-ins.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q288-Q293):

NEW QUESTION # 288

The output from print jobs a user submitted to a laser printer is missing the color yellow. The user has already attempted a cleaning cycle. Which of the following parts most likely needs to be replaced?

- A. Toner tank
- B. Ink cartridge
- C. Resin
- D. Fuser
- E. Imaging drum

Answer: E

Explanation:

An imaging drum is a component of a laser printer that transfers the toner to the paper. It is sensitive to light and can wear out over time, resulting in poor print quality or missing colors. If the cleaning cycle does not resolve the issue, the imaging drum may need to be replaced.

NEW QUESTION # 289

Which of the following is the best way to protect the data of a virtual machine in the event of hardware failure?

- A. UPS
- B. RAID
- C. Cloud-based backup
- D. Redundant hardware

Answer: C

Explanation:

Cloud-based backup involves regularly backing up virtual machine data to offsite cloud storage.

In the event of hardware failure, data can be restored from the cloud backup. This approach provides data protection and also offers the advantage of geographic redundancy, as data is stored offsite.

NEW QUESTION # 290

A technician needs to configure a printer for network communications. Which of the following must the technician configure? (Select THREE).

- A. PCL
- B. Gateway
- C. Subnet mask
- D. Drivers
- E. MAC address
- F. IP address
- G. Dots per Inch
- H. IMEI

Answer: B,C,F

Explanation:

To configure a printer for network communications, the technician must configure its network settings, such as gateway, subnet mask, and IP address. The gateway is the IP address of the router or device that connects the printer to other networks or the internet. The subnet mask is a value that defines which part of the IP address identifies the network and which part identifies the host or device on that network. The IP address is a unique identifier that allows the printer to communicate with other devices.

NEW QUESTION # 291

A laptop's external webcam software is running, but it shows no image or video. Which of the following should a technician perform FIRST?

- A. Restart the computer and run system diagnostics.
- B. Research new webcam firmware.
- C. Reseat the webcam.
- D. Reinstall the webcam software and drivers.

Answer: C

Explanation:

NEW QUESTION # 292

Which of the following allows several websites from different companies to be housed on the same virtual server?

- A. Shared resources
- B. Rapid elasticity
- C. Metered utilization
- D. High availability

Answer: A

Explanation:

Shared resources is the concept that allows several websites from different companies to be housed on the same virtual server. A virtual server is a software-based server that runs on a physical server and can host multiple virtual machines (VMs). Each VM can run a different operating system and application, such as a website, and have its own allocated resources, such as CPU, memory, disk space, and network bandwidth.

However, the VMs share the underlying hardware resources of the physical server, which reduces the cost and complexity of maintaining separate servers for each website. This also enables rapid scalability, as new VMs can be created or deleted as needed. One of the methods to host multiple websites on the same virtual server is to use virtual hosts. Virtual hosts are a feature of web servers, such as Apache, that allow the web server to serve different websites based on the domain name or IP address requested by the client. For example, a web server can host two websites, a.

example.com and b.example.com, on the same virtual server and the same port (such as 80 or 443), by using virtual hosts to map each domain name to a different document root directory. The web server will then deliver the content of the corresponding website to the client based on the domain name in the HTTP request header.
