CompTIA Linux+ Certification Exam Sample Questions (Q213-Q218):

NEW QUESTION # 213

An administrator added a new disk to expand the current storage. Which of the following commands should the administrator run

first to add the new disk to the LVM?

- A. pvresize
- B. lvextend
- C. pvcreate
- D. vgextend

Answer: C

Explanation:

You must first initialize the new disk as an LVM physical volume with pvcreate. Only after creating the PV can you add it to a volume group with vgextend and then resize logical volumes.

NEW QUESTION # 214

A systems administrator is investigating why one of the servers has stopped connecting to the internet.

```
#curl http://google.com
curl: (6) Could not resolve host: google.com

#cat /etc/resolv.conf
search user.company.com company.com
#nameserver 10.10.10.10

#ip route
0.0.0.0/0 via 10.0.5.1 dev eth0 proto static metric 100
10.0.0.0/16 dev eth0 proto kernel scope link src 10.0.3.60 metric 101

#nmcli connection show
NAME                UUID                                  TYPE      DEVICE
eth0                 ba4a3d30-efdc-4fa5-83d3-3721fd4aff75 ethernet  eth0
Wired connection 1   8d569d5a-22a2-356d-8532-9a2638f11b5a5 ethernet  --
```

Which of the following is causing the issue?

- A. Wired connection 1 is offline.
- B. The DNS address has been commented out in the configuration file.
- C. No default route is defined.
- D. The search entry in the /etc/resolv.conf file is incorrect.

Answer: C

Explanation:

Explanation

The issue is caused by the lack of a default route defined in the /etc/sysconfig/network-scripts/ifcfg-enp0s3 file. A default route is a special route that specifies where to send packets that do not match any other routes in the routing table. Without a default route, the server will not be able to communicate with hosts outside its local network. The default route is usually configured with the GATEWAY option in the network interface configuration file. For example, to set the default gateway to 192.168.1.1, the file should contain:

GATEWAY=192.168.1.1

The other options are not causing the issue. The DNS address is not commented out in the configuration file, it is specified with the DNS1 option. The search entry in the /etc/resolv.conf file is correct, it specifies the domain name to append to unqualified hostnames. Wired connection 1 is online, as indicated by the ONBOOT=yes option and the output of ip link show enp0s3 command. NEW QUESTION # 217

During a security scan, the password of an SSH key file appeared to be too weak and was cracked. Which of the following commands would allow a user to choose a stronger password and set it on the existing SSH key file?

- **A. ssh-keygen**
- B. passwd
- C. pwgen
- D. ssh

Answer: A

Explanation:

The command that would allow a user to choose a stronger password and set it on the existing SSH key file is `ssh-keygen -p -f <keyfile>`. This command uses the `ssh-keygen` tool, which is used to generate, manage, and convert authentication keys for SSH. The `-p` option stands for passphrase, and it allows the user to change or remove the passphrase of an existing private key file. The `-f` option specifies the filename of the key file. The command will prompt the user for the old passphrase, and then for the new passphrase twice.
