At QuestionsTube, you can read 300-730 free demo questions in pdf file, so you can check the questions and answers before deciding to download the Cisco 300-730 practice questions. These free demo questions are parts of the 300-730 exam questions. Download and read them carefully, you will find that the 300-730 test questions of QuestionsTube will be your great learning materials online. Share some 300-730 exam online questions below.

P.S. Free 2025 Cisco 300-730 dumps are available on Google Drive shared by PracticeMaterial: <https://drive.google.com/open?id=1tW5lcoxrDbgfp7DsY-fPIw3fyHJuhyyu>

Many people want to be the competent people which can excel in the job in some area and be skillful in applying the knowledge to the practical working in some industry. But the thing is not so easy for them they need many efforts to achieve their goals. Passing the 300-730 test certification can make them become that kind of people and if you are one of them buying our 300-730 study materials will help you pass the 300-730 test smoothly with few efforts needed.

Exam Details

The Cisco 300-730 test lasts 90 minutes. During this time, the individuals need to deal with a range of questions in various formats. The exam can be taken in the English and Japanese languages. The registration process for the test can be done through the Pearson VUE website. The regular price for the exam is \$300. This is a timed, proctored test delivered in a secure environment. The specialists can sit for it using the Pearson VUE centers across the globe or pass it online from the comfort of their houses and offices. You can schedule the exam in advance (up to about 6 weeks). At the same time, the students can schedule the test on the same day. The learners who do not reach the pass mark will be required to retake it. To do this, they have to pay a new fee and schedule the exam at least five working days after the initial failed attempt. Those who nail the test will receive a score report detailing their performances in each of the sections of the exam. Moreover, they will be informed of the next steps in the certification process.

Reliable Valid Dumps 300-730 Questions - Win Your Cisco Certificate with Top Score

By doing this the successful 300-730 candidates can gain several personal and professional benefits in their career and achieve their professional career objectives in a short time period. To attain this you just need to enroll in the Cisco 300-730 Certification Exam and put all your efforts to pass this challenging 300-730 exam with good scores.

Cisco 300-730 certification is part of the Cisco Certified Network Professional (CCNP) Security track. It is a valuable certification for IT professionals who want to advance their careers in network security and secure networking. Implementing Secure Solutions with Virtual Private Networks certification is recognized globally and demonstrates a candidate's proficiency in implementing secure VPN solutions using Cisco technologies. It also provides a competitive edge in the job market and opens up new opportunities for career growth and advancement.

Cisco 300-730 certification exam is essential for professionals who want to enhance their technical knowledge of VPN technologies and establish their expertise in the field of networking. Implementing Secure Solutions with Virtual Private Networks certification can be an excellent way to validate one's skills and demonstrate to potential employers that they possess the necessary skills to implement secure VPN solutions with Cisco technologies. Furthermore, those who pass the 300-730 Exam will earn the Cisco Certified Specialist - Network Security VPN Implementation certification, which helps individuals differentiate themselves in the market and provides an opportunity for better career prospects and higher salaries.

Cisco Implementing Secure Solutions with Virtual Private Networks Sample Questions (Q169-Q174):

NEW QUESTION # 169

What are two variables for configuring clientless SSL VPN single sign-on? (Choose two.)

- A. CSCO_WEBVPN_USERNAME
- B. CSCO_WEBVPN_RADIUS_USER
- C. CSCO_WEBVPN_INTERNAL_PASSWORD
- D. CSCO_WEBVPN_OTP_PASSWORD

Answer: A,C

NEW QUESTION # 170

A network administrator is troubleshooting a FlexVPN tunnel. The hub router is unable to ping the spoke router's tunnel interface IP address of 192.168.1.2, even though the tunnel is showing up. The output of the debug ip packet CLI command on the hub router shows the following entry.

IP: tableid=0123456789 s=192.168.1.1 (local), d=192.168.1.2 (loopback2), routed via FIB.

What must be configured to fix this issue?

- A. An IKEv2 authorization policy must be configured on the spoke router to advertise the interface route.
- B. An outbound ACL on the dynamic VTI of the hub router that allows ICMP traffic to 192.168.1.2.
- C. A matching IKEv2 pre-shared key on the hub and spoke routers in the crypto keyring configuration.
- D. A route map must be configured on hub router to set the next hop for 192.168.1.2 to the dynamic VTI.

Answer: A

NEW QUESTION # 171

An engineer must investigate a connectivity issue and decides to use the packet capture feature on Cisco FTD. The goal is to see the real packet going through the Cisco FTD device and see Snort detection actions as a part of the output. After the capture-traffic command is issued, only the packets are displayed. Which action resolves this issue?

- A. Use the verbose option as a part of the capture-traffic command
- B. Specify the trace using the -T option after the capture-traffic command
- C. Use the capture command and specify the trace option to get the required information

- D. Perform the trace within the Cisco FMC GUI instead of the Cisco FMC CLI

Answer: B

Explanation:

B) Performing the trace within the Cisco FMC GUI instead of the Cisco FMC CLI is not a valid option, because the FMC GUI does not support packet capture or tracing on the FTD device. You can only use the FMC GUI to view and export captures that are taken on the FTD CLI.

C) Using the verbose option as a part of the capture-traffic command is not a valid option, because there is no verbose option for this command. The verbose option is only available for the capture command, which is used to capture packets on the LINA engine domain of the FTD device.

D) Using the capture command and specifying the trace option to get the required information is not a valid option, because the capture command does not have a trace option. The capture command allows you to capture packets on the LINA engine domain of the FTD device, but it does not show the Snort detection actions. The trace option is only available for the packet-tracer command, which is used to simulate a packet going through the FTD device and show its processing steps.

Explanation:

The correct answer is A.

Specify the trace using the -T option after the capture-traffic command. According to the document Use Firepower Threat Defense Captures and Packet Tracer, the capture-traffic command allows you to capture packets on the Snort engine domain of the FTD device. However, by default, it only shows the packet headers and does not include the Snort detection actions. To see the Snort detection actions, you need to use the -T option, which enables tracing. For example:

capture-traffic -T

This will show the packet headers along with the Snort verdicts, such as allow, block, or replace. You can also use other options to filter or save the capture output.

NEW QUESTION # 172

An engineer must configure remote desktop connectivity for offsite admins via clientless SSL VPN, configured on a Cisco ASA to Windows Vista workstations. Which two configurations provide the requested access? (Choose two.)

- A. Citrix bookmark via the ICA plugin
- B. SSH bookmark via the SSH plugin
- C. Telnet bookmark via the Telnet plugin
- D. VNC bookmark via the VNC plugin
- E. RDP2 bookmark via the RDP2 plugin

Answer: B,E

NEW QUESTION # 173

Which two Java-based components for web browsers in clientless SSL VPN sessions are distributed by Cisco? (Choose two.)

- A. ARD
- B. XenApp
- C. VNC
- D. RDP2
- E. SPICE

Answer: C,D

Explanation:

In clientless SSL VPN, Cisco provides Java-based components that allow users to access remote desktops and applications directly through a web browser without needing a full VPN client. Two of these components are:

- RDP2 (Remote Desktop Protocol v2): This enables remote desktop access to Windows machines over an SSL VPN session.
- VNC (Virtual Network Computing): This provides remote desktop access to VNC-enabled systems, such as Linux or macOS machines.
