

How You Can Easily Test Yourself Through EMC D-PST-DY-23 Practice Exam?

DELL EMC D-PST-DY-23 Practice Questions

Dell PowerStore Deploy 2023 Exam

Order our D-PST-DY-23 Practice Questions Today and Get Ready to Pass with Flying Colors!

D-PST-DY-23 Practice Exam Features | QuestionsTube

- Latest & Updated Exam Questions
- Subscribe to FREE Updates
- Both PDF & Exam Engine
- Download Directly Without Waiting

<https://www.questionstube.com/exam/d-pst-dy-23/>

At QuestionsTube, you can read D-PST-DY-23 free demo questions in pdf file, so you can check the questions and answers before deciding to download the DELL EMC D-PST-DY-23 practice questions. These free demo questions are parts of the D-PST-DY-23 exam questions. Download and read them carefully, you will find that the D-PST-DY-23 test questions of QuestionsTube will be your great learning materials online. Share some D-PST-DY-23 exam online questions below.

P.S. Free & New D-PST-DY-23 dumps are available on Google Drive shared by PrepAwayPDF: <https://drive.google.com/open?id=1eFNiVHkCL2dX-5oG1-mDtK8rNnjo5Zm3>

PrepAwayPDF has created reliable and up-to-date D-PST-DY-23 Questions that help to pass the exam on the first attempt. The product is easy to use and very simple to understand ensuring it is student-oriented. The Dell PowerStore Deploy 2023 Exam dumps consist of three easy formats; The 3 formats are Desktop-based practice test software, Web-based practice exam, and PDF.

Passing the EMC D-PST-DY-23 (Dell PowerStore Deploy 2023) Certification Exam is a valuable accomplishment for professionals who want to advance their careers in the IT industry. Dell PowerStore Deploy 2023 Exam certification demonstrates that the candidate has the skills and knowledge necessary to deploy and manage Dell PowerStore systems, which are becoming increasingly popular in enterprise environments. With this certification, professionals can showcase their expertise to potential employers and position themselves for career advancement opportunities.

2025 D-PST-DY-23 – 100% Free Exam Answers | Authoritative Dell PowerStore Deploy 2023 Exam Latest Study Notes

Do you want to find a good job which brings you high income? Do you want to be an excellent talent? The D-PST-DY-23 certification can help you realize your dream which you long for because the D-PST-DY-23 test prep can prove that you own obvious advantages when you seek jobs and you can handle the job very well. So our D-PST-DY-23 Exam Preparation can be conducive to helping you pass the D-PST-DY-23 exam and find a good job. What are you waiting for? Just come and buy our D-PST-DY-23 exam questions!

EMC D-PST-DY-23 certification exam is designed to test an individual's expertise in deploying Dell PowerStore 2023 storage solutions. D-PST-DY-23 exam is ideal for IT professionals who are responsible for implementing storage solutions in their organizations. D-PST-DY-23 Exam focuses on assessing the candidate's knowledge of PowerStore 2023 features, architecture, deployment, and configuration.

EMC Dell PowerStore Deploy 2023 Exam Sample Questions (Q120-Q125):

NEW QUESTION # 120

SIMULATION

Use the simulator to create a new 100 GB volume. Use a category of Other. Associate the new volume with a protection policy that includes a rule that takes a snapshot every hour Monday-Friday and retains it for 5 days. When you have finished continue to the next question.

Answer:

Explanation:

Log into your Storage Management Interface
Access your storage management system where volumes and policies are managed.
Create the Volume
Navigate to the volume creation section. Click "Create Volume" or the equivalent option. Set the volume name, and specify the size as 100 GB. Select the category or class as "Other". Confirm and create the volume.
Create a Snapshot Rule
Move to the "Protection" or "Snapshot Rules" section. Select "Create Rule" or the equivalent. Name the rule according to your naming convention. Configure the rule to take snapshots every hour from Monday to Friday. Set the snapshot retention period to 5 days. Save the rule.
Create a Protection Policy
Go to the "Protection Policies" section. Click "Create Policy" or the equivalent. Name the policy (e.g., "HourlySnapshotPolicy"). Associate the snapshot rule you just created with this policy. Save the new protection policy.
Associate the Volume with the Protection Policy
Return to the "Volumes" section and find the newly created 100 GB volume. Open the volume's settings to manage its properties. Assign the protection policy ("HourlySnapshotPolicy") to the volume. Save the changes to ensure the policy is applied to the volume
Verify and Confirm
Review the volume settings to ensure the correct protection policy is applied. Check the details of the policy to confirm it includes the correct snapshot rule. Monitor the system to ensure that the first snapshots are created as per the schedule.

1. Create the Volume

Navigate to Storage > Volumes.

Click + CREATE.

Enter a name for the volume (e.g., "MyVolume").

Set the volume size to 100 GB.
 In the "Category" dropdown, select Other.
 Click Add.

2. Create the Protection Policy
 Navigate to Protection > Protection Policies.
 Click Add Protection Policy.
 Enter a name for the policy (e.g., "HourlySnapshots").
 Click Next.

3. Configure the Snapshot Rule
 In the "Snapshot Rules" section, click Add Rule.
 Enter a name for the rule (e.g., "HourlyRule").
 Set the Days to Monday through Friday.
 Set the Every field to 1 Hour.
 Set Retain to 5 Days.
 Click Add.
 Click Next.

4. Review and Finish
 Review the protection policy summary.
 Click Finish.

5. Associate the Protection Policy with the Volume
 Navigate back to Storage > Volumes.
 Locate the 100 GB volume you created.
 Click the More Actions button (three vertical dots) and select Edit.
 In the "Protection Policy" field, select the newly created HourlySnapshots policy from the dropdown list.
 Click Save. Verification
 To verify the configuration, go to Protection > Protection Policies. Select the HourlySnapshots policy.
 You should see the configured snapshot rule ("HourlyRule") with the specified settings. Key Considerations
 Snapshot Frequency: The snapshot rule you created will take hourly snapshots of the volume every weekday (Monday to Friday).
 Retention Period: The snapshots will be retained for 5 days before being automatically deleted.
 Storage Space: Snapshots consume storage space. Ensure you have enough free space to accommodate the snapshots taken based on the frequency and retention period.
 By following these steps, you'll successfully create a 100 GB volume, configure a protection policy with the specified snapshot rule, and associate the policy with the volume, fulfilling the requirements of the simulation task.

NEW QUESTION # 121

A storage administrator removed an appliance from the cluster.
 What is the status of the licenses removed from the appliance?

- A. No licensing impact.
- B. Licenses become void.
- C. Licenses are erased.

Answer: C

NEW QUESTION # 122

An administrator must configure a new protection policy for an existing VM with the following parameters.

Rule Name: 2x5x14

Days: M-F

Every: 12 Hours

Retention: 14 Days

Access Type: Snapshot

Policy

Name: Bronze

Snap Rule: 2x5x14

Apply the policy to VM1.

When you have finished continue to the next question.

Answer:

Explanation:
See explanation below.
Explanation:

Log into the Management Interface

Access your virtualization management tool where you manage VMs and policies (such as VMware vSphere or a similar interface).

Create a New Snapshot Rule

Navigate to the section where snapshot or replication rules are managed.

Click on "Create Rule" or the equivalent button.

Enter the rule name as "2x5x14".

Set the schedule for snapshots to occur every 12 hours during weekdays (Monday to Friday).

Set the retention period to keep the snapshots for 14 days.

Ensure the access type is set to "Snapshot".

Save the snapshot rule.

Create a New Protection Policy

Go to the protection policies section.

Click on "Create Policy" or the equivalent option.

Name the policy "Bronze".

Associate the snapshot rule "2x5x14" with this policy.

Save the new policy.

Apply the Protection Policy to VM1

Navigate to the section where VMs are listed.

Select "VM1" from the list of virtual machines.

Access the configuration settings for VM1.

Look for a tab or section labeled "Data Protection", "Protection Policies", or similar.

Select the "Bronze" policy from the list of available protection policies.

Apply or save the changes to ensure that the "Bronze" policy with the "2x5x14" rule is now governing the snapshot configurations for VM1.

Verify the Configuration

Check the settings for VM1 to confirm that the "Bronze" protection policy is applied.

Optionally, monitor the first few snapshot operations to ensure they occur as scheduled and meet the criteria set in the rule.

NEW QUESTION # 123

What are the IP requirements for ICW on PowerStore X and PowerStore T models?

- A. PowerStore T requires seven storage IP addresses and PowerStore X requires three storage IP addresses
- B. PowerStore T requires five management IP addresses and PowerStore X requires six management IP addresses
- **C. PowerStore T requires four management IP addresses and PowerStore X requires six management IP addresses**
- D. PowerStore T requires three storage IP addresses and PowerStore X requires five storage IP addresses

Answer: C

NEW QUESTION # 124

What are three requirements of asynchronous file replication? (Choose three.)

- **A. Configure File Mobility Network.**
- **B. Create bond 1 and Tag replication.**
- C. Create FC zoning between PowerStore.
- D. Configure Data Storage Network.
- **E. Create Remote System**

Answer: A,B,E

Explanation:

Here's a detailed explanation of each requirement:

C . Create bond 1 and Tag replication:

Bonding: Bonding (also known as link aggregation) combines multiple physical network interfaces into a single logical interface (bond1 in this case). This provides redundancy and increased bandwidth for replication traffic. If one physical link fails, replication can continue over the remaining links in the bond.

Tagging: Tagging replication traffic (usually with a VLAN tag) ensures that it is properly routed over the network and isolated from other types of traffic. This helps maintain performance and security for replication.

D . Create Remote System:

Defining the Replication Relationship: In PowerStore Manager, you need to create a "Remote System" object to establish the relationship between the source PowerStore appliance and the destination appliance where replicated data will be stored. This involves specifying the management IP address and credentials of the remote system.

E . Configure File Mobility Network:

Dedicated Network for File Replication: The File Mobility Network (FMN) is a dedicated network in PowerStore specifically for file-level replication traffic. It consists of three additional IP addresses per PowerStore cluster that utilize the existing management network VLAN, gateway, and netmask. These interfaces are mapped to the 1 GbE management ports, sharing the physical port with the existing management interfaces.

1 Isolation and Performance: Using a separate network for file replication ensures that this traffic doesn't interfere with other network activities, such as iSCSI or user access to file shares. This helps maintain optimal performance for both replication and other operations.

Why the other options are incorrect:

A . Create FC zoning between PowerStore: FC zoning is used for block-level storage access (like Fibre Channel SAN), not for file-level replication over Ethernet.

B . Configure Data Storage Network: While a Data Storage Network is essential for general storage traffic, it's not a specific

requirement for configuring asynchronous file replication. File replication relies on the File Mobility Network.

Dell PowerStore Reference

PowerStore: Replication Technologies - Overview and Prerequisites: This document provides a comprehensive overview of replication in PowerStore, including the requirements for different replication types. It specifically mentions the need for a File Mobility Network for file replication.

Link to PowerStore documentation: <https://infohub.delltechnologies.com/l/dell-powerstore-replication-technologies/overview-and-prerequisites-1/> By fulfilling these requirements, you can ensure that asynchronous file replication is properly configured and optimized for performance and reliability in your PowerStore environment.
