

How You Can Pass the Oracle 1z0-1093-25 Exam with Excellent Marks

What's more, part of that TrainingQuiz 1z0-1093-25 dumps now are free: <https://drive.google.com/open?id=1N3F99ZgVK3910n2sf6jTCOXYkUCGlgQk>

With the Oracle 1z0-1093-25 exam practice test questions, you can easily speed up your 1z0-1093-25 exam preparation and be ready to solve all the final Oracle 1z0-1093-25 exam questions. As far as the top features of Oracle 1z0-1093-25 Exam Practice test questions are concerned, these 1z0-1093-25 exam questions are real and verified by experience exam trainers.

Oracle 1z0-1093-25 Exam Syllabus Topics:

Topic	Details
Topic 1	MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle's high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.
Topic 2	Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.
Topic 3	Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.
Topic 4	Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle's Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.

Topic 5	• NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle's NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.

Enhance Your Preparation with the Oracle 1z0-1093-25 Online Practice Test Engine

When candidates don't practice with the latest 1z0-1093-25 exam questions, they fail and lose their precious resources. For candidates who wish to clear the 1z0-1093-25 exam in a short time, TrainingQuiz offers the latest and actual Oracle Exam Questions. Our Oracle Cloud Database Services 2025 Professional (1z0-1093-25) exam questions are excellent and ensure that users succeed in one go. Authentic 1z0-1093-25 Exam Questions are available in these formats: web-based practice exam, desktop practice test software, and PDF format. Since every test taker has unique learning styles, TrainingQuiz has designed these formats to meet the practice needs of 1z0-1093-25 exam candidates.

Oracle Cloud Database Services 2025 Professional Sample Questions (Q50-Q55):

NEW QUESTION # 50

If the Database Management Service is failing to collect performance metrics from a cloud database, which is the LEAST likely cause?

- A. Incorrect IAM policies preventing the service from accessing the database.
- B. The database is temporarily offline.
- C. The database user account used by the Management Agent has been locked.
- **D. The Database Management Service instance is located in a different region than the database.**

Answer: D

Explanation:

Reasoning:

The Database Management Service can collect performance metrics from databases across different regions within the same OCI tenancy. Therefore, the geographic location of the service relative to the database is not a common issue.

More Likely Causes:

- * A: IAM policies that do not grant sufficient permissions are a common issue.
- * B: If the database is offline, no metrics can be collected.
- * D: A locked database user account used by the Management Agent will prevent data collection.

Why C is incorrect:

The Database Management Service can be configured to collect metrics from databases across regions, as long as network access and permissions are properly configured.

NEW QUESTION # 51

Oracle NoSQL Database Cloud Service's key-value model is well-suited for certain types of applications.

Which of the following application scenarios would most directly benefit from the key-value data model's characteristics?

- A. A financial system requiring strict transactional integrity and complex relationships between accounts and transactions.
- B. A content management system needing to enforce a rigid schema for all documents and their metadata.
- C. An application requiring complex analytical queries and joins across multiple related datasets.
- **D. A social media platform needing to store and retrieve individual user profiles and their associated data quickly.**
- E. An enterprise resource planning (ERP) system managing intricate relationships between various business entities.

Answer: D

Explanation:

B: Social Media Platform:

- * Social media applications require quick retrieval of user profiles based on unique IDs.
- * The key-value model supports fast lookups and simple data associations, ideal for user-centric data.
- * The flexibility of storing user attributes in a single document enhances performance and scalability.

Why the other options are incorrect:

- * A. Complex analytical queries: Relational or analytical databases are better suited.
- * C. Financial systems: Require ACID compliance and complex joins, not suitable for key-value models.
- * D. Content management: Typically requires a more structured approach, better handled by document databases.
- * E. ERP systems: Need relational integrity and complex schema support.

NEW QUESTION # 52

When enabling Database Management Service for a cloud database, which of the following is typically NOT a configurable parameter specific to the Database Management Service itself?

- A. The frequency at which performance metrics are collected.
- B. The specific metrics that are collected from the database.
- C. The database version.
- D. The maximum amount of storage space allocated for collected metrics.

Answer: C

Explanation:

D: The database version:

- * The database version is not configurable through the Database Management Service.
- * The version is determined during the database instance provisioning and is independent of the management service.
- * The management service can monitor and manage databases of various versions, but it does not control or alter the version itself.

Why the other options are configurable:

- * A. Frequency of metric collection: Can be adjusted to balance performance and data granularity.
- * B. Specific metrics collected: Can be customized based on monitoring requirements.
- * C. Storage space for metrics: Some configurations allow defining the retention and storage capacity for collected data.

NEW QUESTION # 53

You are managing an Exadata Database Service (ExaDB) and need to perform a full backup of the database to Oracle Cloud Infrastructure Object Storage using the `bkup_api` utility. The backup must include all datafiles and control files. Which `bkup_api` command will achieve this?

- A. `bkup_api bkup_start --datafiles --controlfile --dbname=dbname`
- B. `bkup_api bkup_start --all --dbname=dbname`
- C. `bkup_api bkup_start --dbname=dbname`
- D. `bkup_api bkup_start --full --dbname=dbname`

Answer: D

Explanation:

Full Backup with `bkup_api`:

The `--full` flag in the `bkup_api` command ensures that the backup includes all datafiles and control files. This command is essential for creating a complete, consistent backup suitable for recovery purposes.

- * The backup is stored in OCI Object Storage, leveraging cloud scalability and redundancy.
- * The `--dbname` parameter specifies which database to back up.

Why the other options are incorrect:

- * A: This command may initiate a default backup, not a full one.
- * B: Specifying files individually is less efficient than using `--full`.
- * D: The `--all` option does not necessarily imply a full backup.

NEW QUESTION # 54

Which of the following statements accurately describes the recommended procedure for patching Grid Infrastructure in a BaseDB

VM system where the database is NOT managed by Oracle Cloud Infrastructure (OCI)?

- A. Apply the database patch first, then apply the Grid Infrastructure patch to ensure compatibility.
- B. Apply the Grid Infrastructure patch directly to the DB system. OCI handles the patching order for all components automatically.
- C. You cannot manually patch Grid Infrastructure in a BaseDB VM system; Oracle Cloud Infrastructure manages all patching operations.
- **D. Apply the Grid Infrastructure patch first, then apply the database patch, after validating the GI is working correctly.**

Answer: D

Explanation:

Recommended Patching Order:

In Oracle environments, it is crucial to patch Grid Infrastructure (GI) first because GI components are responsible for managing cluster resources and storage. Applying GI patches before database patches ensures that the underlying infrastructure is compatible and stable.

* After the GI patching, validate the environment to ensure all components are functioning correctly before proceeding with database software updates.

* This order minimizes the risk of downtime or compatibility issues.

Why the other options are incorrect:

* A: OCI does not automatically handle manual patching in non-managed DB systems.

* B: Applying the database patch first may result in compatibility problems.

* D: Users can manually patch Grid Infrastructure in BaseDB VMs.

NEW QUESTION # 55

.....

The Oracle Cloud Database Services 2025 Professional (1z0-1093-25) exam questions are real, valid, and verified by Oracle 1z0-1093-25 certification exam trainers. They work together and put all their efforts to ensure the top standard and relevancy of 1z0-1093-25 Exam Dumps all the time. So we can say that with Oracle 1z0-1093-25 exam questions you will get everything that you need to make the 1z0-1093-25 exam preparation simple, smart, and successful.
