

HP - HPE6-A78 - Accurate Download Aruba Certified Network Security Associate Exam Pdf

2025 Latest FreeCram HPE6-A78 PDF Dumps and HPE6-A78 Exam Engine Free Share: <https://drive.google.com/open?id=1-LSYGPgik559Tmd-817z0fANGr9ZLyj5>

HPE6-A78 exam certification is an international recognition, which is equivalent to a passport to enter a higher position. The HPE6-A78 exam materials and test software provided by our FreeCram are developed by experienced IT experts, which have been updated again and again. Now you just take dozens of Euro to have such Reliable HPE6-A78 Test Materials. Once you get the certification you may have a higher position and salary.

Although the pass rate of our HPE6-A78 study materials can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our HPE6-A78 Preparation braindumps win a place in the field of exam question making forever.

Aruba Certified Network Security Associate Exam Valid Torrent & HPE6-A78 Vce Cram & Aruba Certified Network Security Associate Exam Actual Cert Test

We are amenable to offer help by introducing our HPE6-A78 real exam materials and they can help you pass the Aruba Certified Network Security Associate Exam practice exam efficiently. All knowledge is based on the real exam by the help of experts. By compiling the most important points of questions into our HPE6-A78 guide prep our experts also amplify some difficult and important points. Being devoted to this area for over ten years, our experts keep the excellency of our Aruba Certified Network Security Associate Exam exam question like always. They are distinguished experts in this area who can beef up your personal capacity. By cutting through the clutter of tremendous knowledge, they picked up the essence into our HPE6-A78 Guide prep.

HP HPE6-A78 Exam Syllabus Topics:

Topic	Details

Topic 1	• Protect and Defend: This section of the exam measures the skills of a Network Security Engineer and covers foundational and advanced concepts related to securing a network environment. Candidates are expected to understand common security threats such as man-in-the-middle attacks, DDoS, spoofing, and zero-day vulnerabilities, as well as distinguish between threats and vulnerabilities. It evaluates knowledge of security protocols, PKI components, and firewall mechanisms like PEF and AppRF. It also explores user roles, policy enforcement, and secure management protocols such as SSH and HTTPS.
Topic 2	• Analyze: This section of the exam evaluates the capabilities of a Cybersecurity Analyst and focuses on analyzing network activity and security alerts to identify potential threats. The candidate must demonstrate an understanding of wireless intrusion prevention and detection systems (WIPS • WIDS), interpreting alarms, and recognizing attack stages through the kill chain model. Skills in collecting system logs, reviewing access tracker information, and examining historical network pattern data are essential. The ability to identify and evaluate endpoints discovered on the network is also included in this analytical domain.
Topic 3	• Investigate: This section of the exam assesses the investigative abilities of a Cybersecurity Analyst and centers around proper methods for conducting investigations after a security incident. Candidates are required to know how to collect logs for evidence, understand the principles of maintaining a chain of custody, and initiate an investigation using structured procedures. This domain emphasizes the importance of data integrity, documentation, and analysis during the post-incident process to ensure accurate and reliable outcomes.

HP Aruba Certified Network Security Associate Exam Sample Questions (Q134-Q139):

NEW QUESTION # 134

How should admins deal with vulnerabilities that they find in their systems?

- A. They should notify the security team as soon as possible that the network has already been breached.
- B. They should add the vulnerability to their Common Vulnerabilities and Exposures (CVE).
- C. They should classify the vulnerability as malware, a DoS attack or a phishing attack.
- **D. They should apply fixes, such as patches, to close the vulnerability before a hacker exploits it.**

Answer: D

NEW QUESTION # 135

What is a vulnerability of an unauthenticated Dime-Hellman exchange?

- A. Diffie-Hellman with elliptic curve values is no longer considered secure in modern networks, based on NIST recommendations.
- B. A brute force attack can relatively quickly derive Diffie-Hellman private values if they are able to obtain public values
- **C. A hacker can replace the public values exchanged by the legitimate peers and launch an MITM attack.**
- D. Participants must agree on a passphrase in advance, which can limit the usefulness of Diffie-Hellman in practical contexts.

Answer: C

NEW QUESTION # 136

Which is a use case for enabling Control Plane Policing on Aruba switches?

- A. to encrypt traffic between tunneled node switches and Mobility Controllers (MCs)
- **B. to mitigate Denial of Service (Dos) attacks on the switch**
- C. to prevent the switch from accepting routing updates from unauthorized users
- D. to prevent unauthorized network devices from sending routing updates

Answer: B

Explanation:

Control Plane Policing (CoPP) on Aruba switches is used to mitigate Denial of Service (DoS) attacks on the switch. CoPP allows network administrators to restrict the impact of control plane traffic on the switch's CPU, thereby protecting network stability and integrity. By setting rate limits and specifying allowed traffic types, administrators can prevent malicious or malformed packets from overwhelming the switch's control plane, which could otherwise lead to a DoS condition and potentially disrupt network operations. This use case of CoPP is detailed in Aruba's network management documentation, where best practices and configurations to protect against DoS attacks are discussed.

NEW QUESTION # 137

What is an Authorized client as defined by ArubaOS Wireless Intrusion Prevention System (WIP)?

- A. a client that is on the WIP whitelist.
- B. a client that is not on the WIP blacklist
- C. a client that has a certificate issued by a trusted Certification Authority (CA)
- **D. a client that has successfully authenticated to an authorized AP and passed encrypted traffic**

Answer: D

Explanation:

In the context of ArubaOS Wireless Intrusion Prevention System (WIP), an authorized client is defined as a client that has successfully authenticated to an authorized Access Point (AP) and has passed encrypted traffic.

This ensures that only clients which have been verified and authenticated according to the network's security policies are allowed to access network resources. Authentication typically involves credentials that are validated by a server, confirming the client's right to access the network securely. References:

ArubaOS Wireless Intrusion Prevention System configuration and management guidelines.

NEW QUESTION # 138

What is one practice that can help you to maintain a digital chain of custody in your network?

- A. Ensure that all network Infrastructure devices use RADIUS rather than TACACS+ to authenticate managers
- B. Enable packet capturing on Instant AP or Mobility Controller (MC) control path on an ongoing basis.
- **C. Enable packet capturing on Instant AP or Mobility Controller (MC) datapath on an ongoing basis**
- D. Ensure that all network infrastructure devices receive a valid clock using authenticated NTP

Answer: C

NEW QUESTION # 139

.....

Our HPE6-A78 study materials are excellent examination review products composed by senior industry experts that focuses on researching the mock examination products which simulate the real HPE6-A78 test environment. Experts fully considered the differences in learning methods and examination models between different majors and eventually formed a complete review system. It will help you to Pass HPE6-A78 Exam successfully after a series of exercises, correction of errors, and self-improvement.
