As we all know, review what we have learned is important, since, it can make us have a good command of the knowledge. HPE7-A01 Online test engine has testing history and performance review, and you can have general review of what you have learned. In addition, with the professional team to edit, HPE7-A01 exam cram is high-quality, and it also contain certain quantity, and you can pass the exam by using HPE7-A01 Exam Dumps. In order to serve you better, we have online and offline chat service, and if you have any questions for HPE7-A01 exam materials, you can consult us, and we will give you reply as soon as possible.

If you can own the certification means that you can do the job well in the area so you can get easy and quick promotion. The latest HPE7-A01 quiz torrent can directly lead you to the success of your career. Our materials can simulate real operation exam atmosphere and simulate exams. The download and install set no limits for the amount of the computers and the persons who use HPE7-A01 Test Prep. The HPE7-A01 test prep mainly help our clients pass the HPE7-A01 exam and gain the certification. The certification can bring great benefits to the clients. The clients can enter in the big companies and earn the high salary. You may double the salary after you pass the HPE7-A01 exam.

## Latest HPE7-A01 Test Dumps, Exam HPE7-A01 Sample

It is a popular belief that only professional experts can be the leading one to do some adept job. And similarly, only high quality and

high accuracy HPE7-A01 Exam Questions like ours can give you confidence and reliable backup to get the certificate smoothly because our experts have extracted the most frequent-tested points for your reference. Good practice materials like our Aruba Certified Campus Access Professional Exam study question can educate exam candidates with the most knowledge. Do not make your decisions now will be a pity for good.

HP HPE7-A01 certification exam is designed to test the knowledge and skills of IT professionals in the area of campus access networks. Aruba Certified Campus Access Professional Exam certification is aimed at network engineers, solutions architects, and technical consultants who are responsible for designing, implementing, and managing enterprise-level campus networks. HPE7-A01 Exam Tests a candidate's understanding of Aruba's networking technologies and their ability to design, configure, and troubleshoot Aruba-based networks.

## **HP Aruba Certified Campus Access Professional Exam Sample Questions (Q49-Q54):**

### **NEW QUESTION # 49**

You are deploying Aruba CX 6300's with the customers requirement to only allow one (1) VoIP phone and one (1) device. The following local role gets assigned to the phone port-access role VoIP device-traffic-class voice What set of commands best fits this requirement?

- A. interface 1/1/1  
aaa authentication port-access auth-mode multi-domain
- B. interface 1/1/1  
aaa authentication port-access client-limit 2  
aaa authentication port-access auth-mode client-mode
- **C. interface 1/1/1**  
**aaa authentication port-access client-limit multi-domain 2 aaa authentication port-access auth-mode multi-domain**
- D. interface 1/1/1  
aaa authentication port-access client-limit 1  
aaa authentication port-access auth-mode device-mode

### **Answer: C**

Explanation:

Aruba CX 6300 switches support various features to control the port access for different types of devices, such as client mode, device mode, and multidomain mode. These features can help limit the number of clients that can connect to a port and prevent unauthorized devices from accessing the network.

This is because option C shows how to configure the client limit and the auth-mode for a specific port using the interface command and the aaa authentication port-access command. The client limit specifies the maximum number of clients that can connect to a port. The auth-mode specifies the authentication mode for the port. In this case, option C sets both parameters to multi-domain mode, which allows only one voice device and one data device to be authenticated on a port

### **NEW QUESTION # 50**

Your customer is having issues with Wi-Fi 6 clients staying connected to poor-performing APs when a higher throughput APs are closer. Which technology should you implement?

- **A. ClientMatch**
- B. Airmatch
- C. Clearpass
- D. ARM

### **Answer: A**

Explanation:

Wi-Fi 6 is an industry certification for products that support the new wireless standard 802.11ax, also known as "high-efficiency wireless". Wi-Fi 6 offers increased capacities, improved resource utilization and higher throughput speeds than previous standards. Option B: ClientMatch

This is because option B shows how to use ClientMatch to optimize the wireless performance of Wi-Fi 6 clients on a UniFi network. ClientMatch is a feature that uses machine learning to analyze the traffic patterns of each client and assign them to the best available AP based on their location, device type, and network conditions.<sup>2</sup>

Therefore, option B is the best technology to implement for your customer's issue.

#### **NEW QUESTION # 51**

Due to a shipping error, five (5) Aruba AP-515S and one (1) Aruba CX 6300 were sent directly to your new branch office. You have configured a new group persona for the new branch office devices in Central, but you do not know their MAC addresses or serial numbers. The office manager is instructed via text message on their smartphone to onboard all the new hardware into Aruba Central.

What application must the office manager use on their phone to complete this task?

- A. Aruba Onboard App
- **B. Aruba Central App**
- C. Aruba CX Mobile App
- D. Aruba installer App

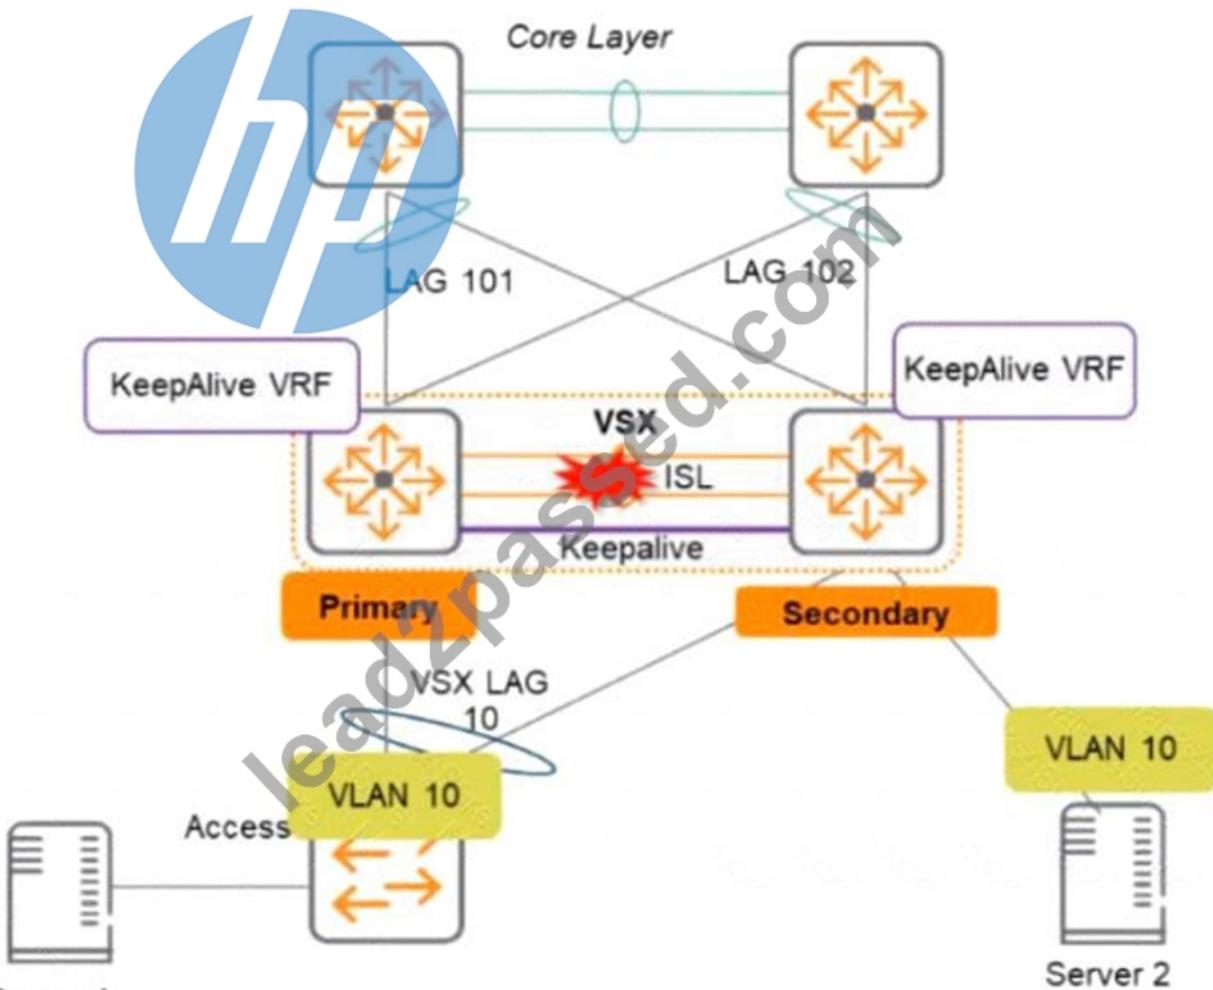

**Answer: B**

Explanation:

Aruba Central is a cloud-based networking solution that empowers IT with AI-powered insights, intuitive visualizations, workflow automation, and edge-to-cloud security to manage campus, branch, remote, data center, and IoT networks from one dashboard. Aruba Central also provides a mobile app that allows users to easily onboard and monitor devices. The app enables users to scan the barcode of a device (such as an AP or a switch) and add it to their network in Aruba Central. The app also lets users monitor the details of Aruba wireless access points and switches and their clients on their network. Therefore, the application that the office manager must use on their phone to complete the task of onboarding all the new hardware into Aruba Central is the Aruba Central App.

#### **NEW QUESTION # 52**

Two AOS-CX switches are configured with VSX at the the Access-Aggregation layer where servers attach to them An SVI interface is configured for VLAN 10 and serves as the default gateway for VLAN 10. The ISL link between the switches fails, but the keepalive interface functions. Active gateway has been configured on the VSX switches.

What is correct about access from the servers to the Core? (Select two.)

- A. Server 1 can access the core layer on only one uplink
- B. Server 1 can access the core layer via both uplinks
- C. Server 2 can access the core layer via the keepalive link
- D. Server 1 and Server 2 can communicate with each other via the core layer
- E. Server 1 can access the core layer via the keepalive link
- F. Server 2 cannot access the core layer.

**Answer: B,D**

Explanation:

Explanation

These are the correct statements about access from the servers to the Core when the ISL link between the switches fails, but the keepalive interface functions. Server 1 can access the core layer via both uplinks because it is connected to VSX-A, which is still active for VLAN 10. Server 2 can also access the core layer via its uplink to VSX-B, which is still active for VLAN 10 because of Active Gateway feature. Server 1 and Server 2 can communicate with each other via the core layer because they are in the same VLAN and subnet, and their traffic can be routed through the core switches. The other statements are incorrect because they either describe scenarios that are not possible or not relevant to the question. References:

### NEW QUESTION # 53

With the Aruba CX 6200 24G switch with uplinks or 1/1/25 and 1/1/26, how do you protect client ports from forming layer-2 loops?

- A. int 1/1/1-1/1/28. loop-protect
- B. int 1/1/1-1/1/24, loop-protect
- C. int 1/1/1-1/1/28. loop-guard
- D. int 1/1/1-1/1/24. loop-guard

## Answer: B

Explanation:

Explanation

The command loop-protect enables loop protection on each layer 2 interface (port, LAG, or VLAN) for which loop protection is needed. Loop protection can find loops in untagged layer 2 links, as well as on tagged VLANs.

## NEW QUESTION # 54

.....

Several advantages we now offer for your reference. On the one hand, our HPE7-A01 learning questions engage our working staff in understanding customers' diverse and evolving expectations and incorporate that understanding into our strategies, thus you can 100% trust our HPE7-A01 Exam Engine. On the other hand, the professional HPE7-A01 study materials determine the high pass rate. According to the research statistics, we can confidently tell that 99% candidates after using our products have passed the HPE7-A01 exam.
