

HPE0-S59 Reliable Exam Preparation - Reliable HPE0-S59 Braindumps Book

DOWNLOAD the newest PassTorrent HPE0-S59 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1eMZlnakJqj18glmHZ8P2c9IlxNeOV1L0>

All the materials in HPE0-S59 exam torrent can be learned online or offline. You can use your mobile phone, computer or print it out for review. With HPE0-S59 practice test, if you are an office worker, you can study on commute to work, while waiting for customers, and for short breaks after work. If you are a student, HPE0-S59 Quiz guide will also make your study time more flexible. With HPE0-S59 exam torrent, you don't need to think about studying at the time of playing. You can study at any time you want to study and get the best learning results with the best learning status.

HP HPE0-S59: HPE Compute Solutions Exam is an industry-recognized exam that helps IT professionals to validate their skills and knowledge in the field of Compute Solutions. HPE0-S59 Exam is designed to test the abilities of IT professionals in designing, configuring, and installing advanced server solutions using HPE products and technologies.

Reliable HPE0-S59 Braindumps Book | HPE0-S59 Latest Exam Labs

In order to meet the needs of all customers, our company employed a lot of leading experts and professors in the field. These experts and professors have designed our HPE0-S59 exam questions with a high quality for our customers. We can promise that our products will be suitable for all people. As long as you buy our HPE0-S59 practice materials and take it seriously consideration, we can promise that you will pass your exam and get your certification in a short time. So choose our HPE0-S59 exam questions to help you review, you will benefit a lot from our HPE0-S59 study guide.

HPE Compute Solutions Sample Questions (Q17-Q22):

NEW QUESTION # 17

You modified a logical interconnect group that is used to configure logical interconnects in five different logical enclosures. What will be the impact of that change?

- A. All logical interconnects configured using this logical Interconnect group will report inconsistency
- B. All logical interconnects configured using this logical interconnect group will be automatically updated
- C. All physical interconnects from the affected logical interconnects must be rebooted to activate the new configuration
- D. All physical interconnects from affected logical interconnects will be placed in a maintenance mode

Answer: D

NEW QUESTION # 18

As a result of the troubleshooting process, you recommend replacing HPE Synergy Composer modules with HPE Synergy

Composer 2.

Why would you recommend this change?

- A. HPE Composer 2 can support more than the maximum 21 frames that are supported with HPE Composer 1 and HPE OneView.
- B. HPE Composer 1 cannot support remote frames, which doubles the configuration and management procedures effort
- C. HPE Composer 1 running HPE OneView 5.2 or later can support only 12 frames within a single management node
- D. HPE Composer 2 provides access to iLO interface that can be used for full management of HPE Composer 2 remotely

Answer: A

Explanation:

HPE Composer 2 offers enhanced scalability compared to HPE Composer 1. While HPE Composer 1 and HPE OneView support up to 21 frames, HPE Composer 2 extends this limit, allowing for greater scalability and more efficient management of larger HPE Synergy environments. This makes HPE Composer 2 a suitable recommendation for customers needing to manage more than 21 frames.

NEW QUESTION # 19

Refer to the exhibit. Which statement about this logical JBOD is true?

Bay	Drive Enclosure	Model	Type	Capacity
10	CZ204400XB_bay.1	EG000600JWJNH	SAS HDD	600 GB

- A. This logical JBOD can be presented to the compute nodes in a different frame.
- B. After deleting this logical JBOD, its drives will not be available until a clean-up procedure is done
- C. This logical JBOD can be connected to multiple systems to formulate a shared datastore.
- D. After deleting this logical JBOD drives will be blocked for 12h in case this JBOD must be re-created

Answer: A

Explanation:

In HPE Synergy, logical JBODs (Just a Bunch of Disks) can be configured to be accessible by compute nodes across different frames. This flexibility allows for the logical JBOD to be presented to compute nodes that are not in the same frame as the storage module, facilitating better resource utilization and workload management.

NEW QUESTION # 20

Your customer plans to deploy a VMware ESXi with HPE Synergy platform. They also plan a vSAN deployment leveraging HPE D3940 Storage Modules and SSD drives. The customer requested the following components:

- HPE Synergy frame with ten HPE Synergy 480 Gen10 Plus compute modules
- Two HPE Virtual Connect SE 100Gb F32 Modules for Synergy
- An appropriate number of vSAN Standard licenses for each compute node
- One HPE D3940 Storage Module with 40 SSDs - All required cables and options

Which statement about this request is true?

- A. vSphere Standard licenses should be replaced with Enterprise Plus licenses to enable vSAN
- B. 20 SSD drives should be removed from this setup, as D3940 supports only 20 SSD or SAS drives.
- C. vSphere licenses should be added, as vSAN licenses do not replace vSphere licenses
- D. One HPE Virtual Connect SE 100Gb F32 Module for Synergy should be replaced with 50GD/S ILM

Answer: C

Explanation:

vSAN licenses and vSphere licenses are separate entities. While vSAN licenses cover the storage virtualization aspect of VMware's hyper-converged infrastructure, vSphere licenses are required for the actual hypervisor operations. Therefore, the customer must ensure they have the appropriate vSphere licenses in addition to vSAN licenses for their compute nodes.

NEW QUESTION # 21

Your customer needs to move an application from an HPE Synergy 480 Gen10 Compute Module to an HPE Synergy 660 Gen 10 Compute Module. The 480 has a switch that has been manually zoned outside of HPE OneView.

What must the customer do before migrating the application?

- A. Edit the server profile and change server hardware type
- B. Migrate the application to a Logical JBOD and connect it to the new server
- C. Create a new server profile template and apply to the new hardware
- D. Copy the server profile and assign the clone to the new hardware

Answer: D

Explanation:

When migrating an application from an HPE Synergy 480 Gen10 Compute Module to an HPE Synergy 660 Gen10 Compute Module, the recommended approach is to copy the server profile and assign the clone to the new hardware. This ensures that all the necessary configuration settings, including network and storage configurations, are retained and applied to the new compute module. Since the switch zoning is manually configured outside of HPE OneView, copying the server profile helps in maintaining consistency in the network settings during the migration.

NEW QUESTION # 22

.....

Our team of professionals and experts has prepared HPE0-S59 vce dumps by keeping the vigilant eyes on the current exam information and exam requirements. In case you failed exam with our HPE0-S59 study guide we will get you 100% money back guarantee and you can contact our support if you have any questions about our HPE0-S59 Real Dumps. We will be your support when you need us anytime.
