

HPE0-S59 Reliable Learning Materials - Dumps HPE0-S59 Free Download

P.S. Free & New HPE0-S59 dumps are available on Google Drive shared by TestValid: https://drive.google.com/open?id=10m5DwmVq8xFcUFStuGrA_5NN1N5ZqhW5

We are committed to providing our customers with the most up-to-date and accurate HPE Compute Solutions (HPE0-S59) preparation material. That's why we offer free demos and up to 1 year of free HP Dumps updates if the HPE0-S59 certification exam content changes after purchasing our product. With these offers, our customers can be assured that they have the latest and most reliable prepare for your HPE Compute Solutions (HPE0-S59) preparation material.

HPE0-S59 exam is a multiple-choice exam that covers a range of topics related to HPE compute solutions. These include HPE ProLiant servers, HPE SimpliVity hyperconverged solutions, HPE Synergy composable infrastructure, HPE OneView, HPE Integrated Lights Out (iLO), and HPE Smart Array Controllers. HPE0-S59 Exam also covers important concepts related to HPE compute solutions, such as virtualization, cloud computing, and software-defined infrastructure.

Dumps HPE0-S59 Free Download & HPE0-S59 Latest Braindumps Ppt

Knowledge is defined as intangible asset that can offer valuable reward in future, so never give up on it and our HPE0-S59 exam preparation can offer enough knowledge to cope with the exam effectively. To satisfy the needs of exam candidates, our experts wrote our HPE0-S59 practice materials with perfect arrangement and scientific compilation of messages, so you do not need to study other HPE0-S59 training questions to find the perfect one anymore.

To pass the HP HPE0-S59 (HPE Compute Solutions) Certification Exam, candidates must have a deep understanding of HPE compute solutions and be able to apply that knowledge to real-world scenarios. They must also be able to troubleshoot and resolve issues related to HPE compute solutions, as well as provide recommendations for improving performance and efficiency. HPE0-S59 Exam is designed to be challenging, but passing it can help IT professionals advance their careers and increase their earning potential.

HPE Compute Solutions Sample Questions (Q104-Q109):

NEW QUESTION # 104

Hotspot Question

Your customer is implementing an HPE Synergy solution based on three frames. Click each of the ports that can be used to connect satellite modules.

Answer:

Explanation:

NEW QUESTION # 105

Your customer has an HPE Synergy frame equipped with a D3940 Storage Module. Each of the compute nodes has an appropriate storage controller installed and two 12Gb SAS switches installed in the first fabric.

The customer reports that compute nodes cannot access the storage module. What should you verify first when troubleshooting this problem?

- A. If there is at least one iSCSI network configured that will provide access to the module.
- B. If there is a logical interconnect created based on the 12Gb SAS switches.
- C. If the D3940 module is imported in managed state that allows volume provisioning.
- D. If the D3940 storage module is properly licensed through HPE OneView interface.

Answer: C

NEW QUESTION # 106

Your customer plans to deploy VMware vSAN using D3940 Storage Modules.

Which statement about this solution is true?

- A. For VMware vSAN deployment, all drives in the D3940 storage modules must be SSD drives.
- B. To use the storage controller that will access D3940 storage modules, a second CPU must be installed.
- C. All drives in the D3940 storage modules must formulate a single logical drive with RAID5 configured
- D. The 12Gb SAS modules required for D3940 connectivity can only be installed in the first fabric.

Answer: A

Explanation:

For VMware vSAN deployments, it is recommended that all drives in the D3940 storage modules be SSD drives to ensure optimal performance and efficiency. SSDs provide the necessary speed and reliability required by vSAN for handling storage-intensive operations and maintaining high performance.

NEW QUESTION # 107

Your customer needs to move an application from an HPE Synergy 480 Gen10 Compute Module to an HPE Synergy 660 Gen 10

Compute Module. The 480 has a switch that has been manually zoned outside of HPE OneView. What must the customer do before migrating the application?

- A. Create a new server profile template and apply to the new hardware
- B. Edit the server profile and change server hardware type
- C. Migrate the application to a Logical JBOD and connect it to the new server
- **D. Copy the server profile and assign the clone to the new hardware**

Answer: D

Explanation:

When migrating an application from an HPE Synergy 480 Gen10 Compute Module to an HPE Synergy 660 Gen10 Compute Module, the recommended approach is to copy the server profile and assign the clone to the new hardware. This ensures that all the necessary configuration settings, including network and storage configurations, are retained and applied to the new compute module. Since the switch zoning is manually configured outside of HPE OneView, copying the server profile helps in maintaining consistency in the network settings during the migration.

NEW QUESTION # 108

An HPE Synergy customer needs to prevent a timeout and loss of communication during an external switch firmware upgrade. Click the parameter that the customer should configure within an uplink set to meet this requirement

The screenshot shows the 'Create Uplink Set' configuration page in HPE OneView. The page is titled 'Create Uplink Set' and has a question mark icon in the top right corner. The 'General' tab is selected. The configuration includes the following fields and values:

- Name: Prod-US
- Consistency checking: Exact match (dropdown)
- Type: Ethernet (dropdown)
- Connection mode: Automatic
- LACP timer: Short (30s) (dropdown)
- LACP load balancing: Source & Destination MAC Address (dropdown)
- LACP failover trigger: All active uplinks transition to offline (dropdown)
- LACP distribute uplink ports: ☒

Answer:

Explanation:

Prod-US

Exact match

Ethernet

Automatic

Short (1s)

Source & Destination MAC Address

All active uplinks transition to offline

☒

To prevent a timeout and loss of communication during an external switch firmware upgrade, the customer should configure the LACP failover trigger within the uplink set. By setting the LACP failover trigger to "All active uplinks transition to offline," the configuration ensures that the traffic will be redirected to available uplinks in the event of an uplink failure or during the upgrade process, maintaining communication and preventing timeouts.
