HP Aruba Certified Campus Access Professional Exam Sample Questions (Q104-Q109):

NEW QUESTION # 104

Your customer has asked you to assign a switch management role for a new user. The customer requires the user role to View

switch configuration information and have access to the PUT and POST methods for REST API.
Which default AOS-CX user role meets these requirements?

- A. helpdesk
- B. auditors
- C. sysops
- D. administrators

Answer: C

Explanation:

The sysops user role is a predefined role that allows users to view switch configuration information and have access to the PUT and POST methods for REST API. The sysops user role can also use the PATCH and DELETE methods for REST API, but not for all resources. The sysops user role is suitable for users who need to perform system operations on the switch, such as backup, restore, upgrade, or reboot.

NEW QUESTION # 105

You are proposing new CX 8360 VSX switches to replace a customer's existing core switches. The customer is concerned about the possibility of a split-brain scenario between the VSX pair.

How is the VSX pair affected when the ISL is down and keepalive is up?

- A. The VSX pair is out-of-sync.
- B. The VSX pair nodes are still forwarding traffic.
- C. The VSX LAGs are in a degraded state.
- D. The VSX pair is not at risk.

Answer: D

NEW QUESTION # 106

What is a primary benefit of BSS coloring?

- A. BSS color tags improve security by identifying rogue APs and removing them from the network.
- B. BSS color tags are applied to client devices and can reduce the threshold for interference
- C. BSS color tags are applied to Wi-Fi channels and can reduce the threshold for interference
- D. BSS color tags improve performance by allowing clients on the same channel to share airtime.

Answer: C

NEW QUESTION # 107

Your Director of Security asks you to assign AOS-CX switch management roles to new employees based on their specific job requirements. After the configuration was complete, it was noted that a user assigned with the administrators role did not have the appropriate level of access on the switch.

The user was not limited to viewing nonsensitive configuration information and a level of 1 was not assigned to their role. Which default management role should have been assigned for the user?

- A. helpdesk
- B. config
- C. sysadmin
- D. operators

Answer: A

Explanation:

Explanation

The helpdesk role is the default management role that should have been assigned for the user who needs to view nonsensitive configuration information. The helpdesk role has a level of 1 and allows read-only access to most commands except those related to security or passwords. The administrators role has a level of 15 and allows full read-write access to all commands. The operators role has a level of 5 and allows read-write access to most commands except those related to security or passwords. The config role
