HPE7-A01 Test Dates | New HPE7-A01 Test Syllabus

Passing the HPE7-A01 exam requires the ability to manage time effectively. In addition to the Aruba Certified Campus Access Professional Exam (HPE7-A01) exam study materials, practice is essential to prepare for and pass the HP HPE7-A01 exam on the first try. It is critical to do self-assessment and learn time management skills. Because the HPE7-A01 test has a restricted time constraint, time management must be exercised to get success. Only with enough practice one can answer real HP HPE7-A01 exam questions in a given amount of time.

The Aruba Certified Campus Access Professional Exam certification is relevant for network professionals who work with Aruba solutions and want to gain recognition for their skills and knowledge. Candidates who pass the HP HPE7-A01 exam will prove their expertise in a range of areas including protocols, network design, and access control. With this certification, IT professionals are in a better position to design, implement, and manage Aruba networks, thereby increasing their chances of growth within their organization.

HPE7-A01 exam is focused on testing the candidate's understanding of the Aruba Campus Switching solutions, including the ArubaOS-CX operating system and the Aruba hardware platforms. It also covers topics such as VLANs, Spanning Tree, link aggregation, and Layer 3 routing. Candidates who Pass HPE7-A01 Exam will be able to design, implement, and troubleshoot complex network solutions using Aruba's technology.

Free PDF Quiz 2025 HPE7-A01 - Aruba Certified Campus Access Professional Exam Test Dates

The Aruba Certified Campus Access Professional Exam (HPE7-A01) web-based practice test works on all major browsers such as Safari, Chrome, MS Edge, Opera, IE, and Firefox. Users do not have to install any excessive software because this Aruba Certified Campus Access Professional Exam (HPE7-A01) practice test is web-based. It can be accessed through any operating system like Windows, Linux, iOS, Android, or Mac. Another format of the practice test is the desktop software. It works offline only on Windows. Our Aruba Certified Campus Access Professional Exam (HPE7-A01) desktop-based practice exam software comes with all specifications of the web-based version.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q48-Q53):

NEW QUESTION # 48
What is a primary benefit of BSS coloring?

- A. BSS color tags are applied to Wi-Fi channels and can reduce the threshold for interference
- B. BSS color tags are applied to client devices and can reduce the threshold for interference
- C. BSS color tags improve security by identifying rogue APs and removing them from the network.
- D. BSS color tags improve performance by allowing clients on the same channel to share airtime.

Answer: A

NEW QUESTION # 49

The customer needs a network hardware refresh to replace an aging Aruba 5406R core switch pair using spanning tree configuration with Aruba CX 8360-32YC switches What is the benefit of VSX clustering with the new solution?

- A. dual Aruba AP LAN port connectivity for PoE redundancy
- B. stacked data-plane
- C. dual control plane provides better resiliency
- D. faster MSTP converge processing

Answer: C

Explanation:
VSX clustering is a feature that allows two Aruba CX switches to operate as a single logical device, providing high availability, scalability, and simplified management. VSX clustering has several benefits over spanning tree configuration, such as:
Dual control plane provides better resiliency. Unlike stacking, where switches share a single control plane, VSX switches have independent control planes that synchronize their states over an inter-switch link (ISL). This means that if one switch fails or reboots, the other switch can continue to operate without affecting traffic flows or network services.
Active-active forwarding provides better performance. Unlike spanning tree, where some links are blocked to prevent loops, VSX switches use all available links for forwarding traffic, providing load balancing and increased bandwidth utilization.
Multichassis LAG provides better redundancy. Unlike single-chassis LAG, where all member ports belong to one switch, VSX switches can form multichassis LAGs with downstream or upstream devices, where member ports are distributed across both switches. This provides link redundancy and seamless failover in case of switch or port failure.

NEW QUESTION # 50

Due to a shipping error, five (5) Aruba AP-515S and one (1) Aruba CX 6300 were sent directly to your new branch office You have configured a new group persona for the new branch office devices in Central, but you do not know their MAC addresses or serial numbers The office manager is instructed via text message on their smartphone to onboard all the new hardware into Aruba Central.
What application must the office manager use on their phone to complete this task?

- A. Aruba installer App
- B. Aruba CX Mobile App
- C. Aruba Onboard App
- D. Aruba Central App

Answer: D

NEW QUESTION # 51

A customer has several hundred wireless loT devices and is looking for an authentication solution that meets the following requirements:

```
- The wireless traffic between the IoT devices and the Access Points must be encrypted
- Unique passphrase per device
- Use fingerprint information to perform role-based access
```

Which solutions will address the customer's requirements? (Select two.)

- A. MPSK Local with MAC Authentication
- B. MPSK Local with EAP-TLS
- C. MPSK and an internal RADIUS server
- D. Local User Derivation Rules
- E. HPE Aruba Networking ClearPass Policy Manager

Answer: A,E

NEW QUESTION # 52

In AOS 10. which session-based ACL below will only allow ping from any wired station to wireless clients but will not allow ping from wireless clients to wired stations"? The wired host ingress traffic arrives on a trusted port.

- A. ip access-list session pingFromWired any user any permit
- B. ip access-list session pingFromWired any any svc-icmp deny any user svc-icmp permit
- C. ip access-list session pingFromWired any any svc-icmp permit user any svc-icmp deny
- D. ip access-list session pingFromWired user any svc-icmp deny any any svc-icmp permit

Answer: B

Explanation:
A). ip access-list session pingFromWired any user any permit
This will allow all traffic from any source to wireless clients (user). Not what we want.
B). ip access-list session pingFromWired user any svc-icmp deny any any svc-icmp permit
The first rule denies ICMP (ping) from wireless clients (user) to any destination.
The second rule permits ICMP from any source to any destination. However, since the deny rule is processed first, pings from wireless clients will be blocked.
This option looks correct based on the rules provided.
C). ip access-list session pingFromWired any any svc-icmp permit user any svc-icmp deny The first rule permits ICMP from any source to any destination. This includes wireless clients pinging wired stations.
The second rule denies ICMP from wireless clients to any destination. However, since it comes after the permit rule, it will never be processed.
This doesn't match the desired behavior.
D). ip access-list session pingFromWired any any svc-icmp deny any user svc-icmp permit The first rule denies ICMP from any source to any destination. Since this is the first rule, it will block all ICMP traffic.
This option will not allow the desired behavior.
Given the explanations above, the correct answer is:
B). ip access-list session pingFromWired user any svc-icmp deny any any svc-icmp permit

NEW QUESTION # 53

......

With our HPE7-A01 exam questions, you can adjust yourself to the exam speed and stay alert according to the time-keeper that we set on our HPE7-A01 training materials. Therefore, you can trust on our products for this effective simulation function will eventually improve your efficiency and assist you to succeed in the HPE7-A01 Exam. If you are ready, the HPE7-A01 exam will just be a piece of cake in front of you. And our HPE7-A01 exam questions are the right tool to help you get ready.
