The world is changing rapidly and the requirements to the employees are higher than ever before. If you want to find an ideal job and earn a high income you must boost good working abilities and profound major knowledge. Passing HPE7-A03 certification can help you realize your dreams. If you buy our product, we will provide you with the best Aruba Certified Professional study materials and it can help you obtain HPE7-A03 certification. Our product is of high quality and our service is perfect.

Do you eager to find the ideal job? Do you eager to pass the HPE7-A03 exam easily? If you want to, then you have arrived right place now. We provide authentic exam materials for HPE7-A03 exam, and we can make your exam preparation easy with our study material various quality features. With the guidance of no less than seasoned professionals, we have formulated updated actual questions for exams, over the years. By practicing our HPE7-A03 study materials, you are reducing your chances for failure exam. What's more, we will give all candidates who purchased our material a guarantee that they will pass the HPE7-A03 Exam on their very first try. If we fail to deliver our promise, we will give candidates full refund. There are thousands of candidates choose to trusted us and got paid. So, if you really eager to pass the exam, our HPE7-A03 study materials must be your best choice.

>> HPE7-A03 Exam Dumps Pdf <<

Realistic HPE7-A03 Exam Dumps Pdf, Ensure to pass the HPE7-A03 Exam

Before purchasing our HPE7-A03 practice guide, we will offer you a part of questions as free demo for downloading so that you can know our HPE7-A03 exam question style and PDF format deeper then you will feel relieved to purchase certification HPE7-A03 study guide. We try our best to improve ourselves to satisfy all customers' demands. If you have any doubt or hesitate, please feel free to contact us about your issues. If you have doubt about our HPE7-A03 Exam Preparation questions the demo will prove that our product is helpful and high-quality.

HP HPE7-A03 Exam Syllabus Topics:

Topic	Details
Topic 1	Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements.
Topic 2	Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information.
Topic 3	Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions.
Topic 4	Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution.

HP Aruba Certified Campus Access Architect Exam Sample Questions (Q38-Q43):

NEW QUESTION # 38

A global cruise line company needs to refresh its current fleet. They will refresh the insides of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware.

They start with the smallest ship with a maximum of 800 guests

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDF of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (930 ft) and the type used is OS1. Each cabin is connected by a single

OM2 pair to the IDF. the maximum length is 60 meters (200 ft). Each technical room is connected by a single

OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN Infrastructure is based on the 200/300 series Indoor and outdoor APs running InstantOS (less than 300 APs).

the customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed.

Based on the best practices and customer requirements, what is the correct WLAN approach?

- A. Aruba OSS campus deployment
- **B. Instant OS 6 deployment**
- C. ArubaOS10 AP only deployment
- D. Aruba OS10 AP and gateway deployment

Answer: B

Explanation:

Given the customer's specific requirements to refresh their WLAN infrastructure without changing the cabling or AP locations and their existing infrastructure based on the 200/300 series Indoor and outdoor APs running InstantOS, the most appropriate WLAN approach is an Instant OS 6 deployment. This choice aligns with the need to upgrade without significant changes to the existing WLAN setup. InstantOS is specifically designed for Aruba Instant APs, offering a streamlined, controller-less architecture that is ideal for the customer's scenario, ensuring ease of deployment, management, and scalability. This approach supports the customer's objectives for a cost-effective and sustainable refresh, providing robust and reliable wireless connectivity for guests while adhering to the current security requirements and infrastructure constraints.

NEW QUESTION # 39

You are designing a solution with Aruba OS10-based access points and redundant gateways and these are the requirements:

- * W1-F16E based access points
- * support for tunneled traffic
- * application visibility
- * rogue APs
- * live upgrades
- * Air Slice
- * Cloud Guest Authentication
- * AI insights

Which licenses are needed? (Select two.)

- A. WIAN Gateway
- B. Gateway Foundation
- C. AP Foundation
- D. AP Advanced

Answer: C,D

Explanation:

For a solution design incorporating Aruba OS10-based access points with the specified requirements, including Wi-Fi 6E support, tunneled traffic, application visibility, rogue AP detection, live upgrades, Air Slice, Cloud Guest Authentication, and AI insights, the necessary licenses are AP Foundation (Option A) and AP Advanced (Option C). The AP Foundation license provides basic connectivity and network access control features essential for establishing a Wi-Fi network. The AP Advanced license adds advanced capabilities such as application visibility and control, enhanced security features like rogue AP detection, and performance optimization features like Air Slice. These licenses together ensure the access points can deliver the full range of required functionalities, from reliable basic connectivity to sophisticated network management and security, making them suitable for a comprehensive and high-performing wireless network solution.

NEW QUESTION # 40

A global cruise line company needs to refresh its current fleet. They will refresh the insides of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware.

They start with the smallest ship with a maximum of 800 guests

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDF of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (930 ft) and the type used is OS1. Each cabin is connected by a single

OM2 pair to the IDF. the maximum length is 60 meters (200 ft). Each technical room is connected by a single

OM2 pair to the IDF. with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN Infrastructure is based on the 200/300 series Indoor and outdoor APs running InstantOS (less than 300 APs).

the customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed.

Based on the best practices, what should be recommended as the most cost-effective switch model for the technical rooms?

- A. HPE Aruba Networking 6200M 36G 12SR5 ClassG PoE 4SFP*
- **B. HPE Aruba Networking 6300M 24p HPE Smart Rate 1 G/2.5G/5G/10G Class6 PoE and 2p 50G and 2p 25G**
- C. Aruba 6300M 12p ClassD PoE and 36p Class6 PoE HPE Smart Rate 1G/2.5G/5G and 2p SOG and 2p 10G
- D. HPE Aruba Networking 6200M 24G Class- PoE 4SFP*

Answer: B

Explanation:

For technical rooms requiring redundant power and an upgrade to 10GbE uplinks to handle increased network traffic, the most cost-effective switch model is the HPE Aruba Networking 6300M 24p HPE Smart Rate 1G/2.5G/5G/10G Class6 PoE and 2p 50G and 2p 25G. This model offers the necessary port density and speed flexibility, with support for high-power PoE devices and uplink capabilities that meet the future-proofing needs for technical rooms on the cruise ships. The switch's redundant power capabilities ensure high availability and resilience for critical technical room infrastructure, aligning with the customer's requirements for sustainability, cost-effectiveness, and preparedness for future hardware refreshes without extensive unused port capacities.

NEW QUESTION # 41

What possible issue with the core switch selection do you see in regards to the customers' requirements?

- **A. The core switch will not support the 25GbE downlinks to the distribution switches.**
- B. The core switch will have a lot of unused ports.
- C. The core switch will not have enough ports for VSX links.
- D. The core switch will not support the 10GbE downlinks to the cabins and technical rooms.

Answer: A

Explanation:

In the scenario described, the most significant issue with the core switch selection, according to Aruba Campus Access learning resources, is answer A: "The core switch will not support the 25GbE downlinks to the distribution switches." This is a critical consideration because the bandwidth capabilities between the core and distribution layers significantly impact the overall network performance and scalability. If the core switch cannot support 25GbE downlinks, it may create a bottleneck, preventing the distribution switches from operating at their full capacity and affecting the performance of connected devices and applications. Ensuring the core switch has the necessary port speeds and densities to support the intended design and traffic patterns is crucial in network design, as emphasized in Aruba's documentation on campus network architectures.

NEW QUESTION # 42

Based on this campus design, which layer is the most appropriate to be designed as a Border Persona, considering an EVPN VXLAN Fabric?

Answer:

Explanation:

Explanation:

Based on the campus design provided and considering an EVPN VXLAN Fabric, the most appropriate layer to be designed as a Border Persona would be the "ServicesAggregation" layer. In an EVPN VXLAN architecture, the Border or Border Leaf nodes provide connectivity to external networks, such as WAN, internet, or private connections. They are responsible for routing traffic into and out of the VXLAN fabric and typically also handle services like firewalling, load balancing, and other network services.

NEW QUESTION # 43

.....

The clients only need 20-30 hours to learn the HPE7-A03 exam questions and prepare for the test. Many people may complain that we have to prepare for the HPE7-A03 test but on the other side they have to spend most of their time on their most important things such as their jobs, learning and families. But if you buy our HPE7-A03 Study Guide you can both do your most important thing well and pass the test easily because the preparation for the test costs you little time and energy.
