We are constantly updating our practice material to ensure that you receive the latest preparation material based on the actual HP HPE7-A08 exam content. Up to 1 year of free HPE Aruba Networking Switching Professional Exam (HPE7-A08) exam questions updates are also available at GuideTorrent. The GuideTorrent offers a money-back guarantee (terms and conditions apply) for students who fail to pass their HPE Aruba Networking Switching Professional Exam (HPE7-A08) exam on the first try.

HP HPE7-A08 Exam Syllabus Topics:

Topic	Details
Topic 1	• Create the Implementation Plan for the Wired Network Solution: This section measures the skills of Network Designers who focus on understanding the HPE switching portfolio and selecting the right products to match various customer requirements. Candidates must also demonstrate the ability to create detailed and effective implementation plans based on given designs or customer scenarios to ensure successful wired network deployments.

Topic 2	• Install and Configure the Wired Network Solution: This domain evaluates the abilities of Network Engineers to provision and configure HPE Aruba Networking switches both via Aruba Networking Central and command-line interface. It covers physical switch setup, Layer 2 and Layer 3 configuration and validation, multicast features, security implementations, quality of service (QoS) settings, and integration of Aruba Networking solutions into existing environments.
Topic 3	• Manage, Maintain, Optimize, and Monitor the Wired Network Solution: This part measures the skills of Network Operations Engineers in managing and maintaining wired network infrastructures. It includes developing configuration management strategies, interpreting network operational data to make informed decisions, and programmatically auditing or configuring Aruba Networking switches to optimize performance and reliability.
Topic 4	• Troubleshoot the Wired Network Solution: Candidates in this section, typically Network Support Specialists, are tested on identifying common wired network failures such as IP or VLAN mismatches, hardware issues, or port misconfigurations. It also involves analyzing performance problems caused by QoS or configuration errors and formulating effective remediation plans to restore correct network operations.

2025 HPE7-A08 Prep Guide | Valid HPE7-A08 New Dumps Pdf: HPE Aruba Networking Switching Professional Exam 100% Pass

We try our best to present you the most useful and efficient HPE7-A08 training materials about the test and provide multiple functions and intuitive methods to help the clients learn efficiently. Learning our HPE7-A08 useful test guide costs you little time and energy. The passing rate and hit rate are both high thus you will encounter few obstacles to pass the test. You can further understand our HPE7-A08 study practice guide after you read the introduction on our web.

HPE Aruba Networking Switching Professional Exam Sample Questions (Q78-Q83):

NEW QUESTION # 78

Which feature allows Aruba CX switches to support automated VLAN assignment and access control?

- A. Virtual Switching Extension (VSX)
- B. Smart Rate Ports
- C. NetEdit
- **D. Dynamic Segmentation**

Answer: D

Explanation:

Dynamic Segmentation enables policy-based VLAN assignment and security enforcement, ensuring consistent access control across wired and wireless networks.

NEW QUESTION # 79

You recently enabled ARP protection on your CX switches, but many users now complain that they can no longer access the network.

What do you need to configure to resolve the issue?

- **A. DHCP snooping**
- B. Dynamic IP lockdown
- C. IGMP snooping
- D. DHCP reservations

Answer: A

NEW QUESTION # 80

Which CLI command checks queue utilization and dropped packets on an Aruba CX switch?

- A. show queue counters
- B. show traffic priority
- C. show qos queue statistics
- D. display qos usage

Answer: C

Explanation:

The show qos queue statistics command provides insight into how traffic is prioritized and managed, helping diagnose congestion-related performance issues.

NEW QUESTION # 81

Which CLI command displays IGMP snooping information on an Aruba CX switch?

- A. show snooping interfaces
- B. show multicast igmp
- C. display igmp snooping
- D. show ip igmp snooping

Answer: D

Explanation:

The show ip igmp snooping command displays multicast group memberships, helping network administrators monitor and troubleshoot multicast traffic forwarding.

NEW QUESTION # 82

Refer to the exhibit:

```
Core-1(config)# show spanning-tree mst-config
MST configuration information
  MST config ID       : CXF
  MST config revision : 1
  MST config digest   : BE0284020F4D46A8DA89C509B384F78A
  Number of instances : 2

Instance ID   Member VLANs
-----
0             1-10,13-4040
1             11
2             12

Core-2(config)# show spanning-tree mst-config
MST configuration information
  MST config ID       : 90:20:c2:c0:bc:00
  MST config revision : 0
  MST config digest   : AC36177F50283CD488382108A826DE62
  Number of instances : 0

Instance ID   Member VLANs
-----
0             1-4040
```

Both switches, Core-1 and Core-2, are configured with default spanning-tree priorities. Both switches appear as primary root bridges. What must be done to have only one spanning tree domain?

- A. Create MST instances 1 and 2 on Core-2.

- Answer: C**

If both switches are configured with default spanning-tree priorities and both appear as primary root bridges, to have a single spanning tree domain, matching MST configuration (Multiple Spanning Tree) must be created on Core-2 to align with Core-1. Setting priority to 1 on one switch can help but matching MST configurations is the recommended approach for multiple VLANs. Creating MST instances on only one switch will not ensure consistency. Matching MST configurations ensures consistent root bridge election and stable spanning tree.
