When designing IGP routes for an enterprise bearer WAN, ensure that the metric of aggregation-layer links is smaller than that of access-layer links, so that data can be preferentially forwarded over aggregation-layer links.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

IGP Metric Design in Enterprise WANs

In an enterprise bearer WAN, routing metrics determine path selection. The aggregation layer connects multiple access-layer devices to the core network, so it should have a lower metric to:

Ensure traffic is forwarded through higher-capacity aggregation links instead of lower-bandwidth access links.# Optimize traffic flow, reduce congestion, and improve network efficiency.# Enhance reliability by preferring more stable aggregation links.

IGP Routing Protocols Considerations:

* OSPF: Lower cost values indicate preferred paths.

* IS-IS: Lower link metrics result in preferred forwarding paths.
