We respect privacy of buyers, and if you buying H31-341_V2.5-ENU exam materials from us, we will ensure you that your personal information such as name and email address will be protected well and we won't send junk mail to you. We can tell you that once you finish buying the H31-341_V2.5-ENU exam dumps, your personal information will be concealed. Moreover H31-341_V2.5-ENU Exam Dumps are famous for high quality, and you can pass the exam just one time. Free demo will offer to you, so that you can have a try before buying. If you indeed have other questions, just contact us.

Huawei H31-341_V2.5 (HCIP-Transmission V2.5) exam is a certification exam designed for network engineers and professionals who specialize in the transmission of data across various networks. H31-341_V2.5-ENU Exam is a part of the Huawei Certified ICT Professional (HCIP) certification program and is intended to validate the skills and knowledge required to design, deploy, and manage the transmission network of a company.

Exam H31-341_V2.5-ENU Questions, Valid H31-341_V2.5-ENU Test Guide

Are you worried about how to pass the terrible Huawei H31-341_V2.5-ENU exam? Do not worry, With PrepAwayPDF's Huawei H31-341_V2.5-ENU exam training materials in hand, any IT certification exam will become very easy. PrepAwayPDF's Huawei H31-341_V2.5-ENU Exam Training materials is a pioneer in the Huawei H31-341_V2.5-ENU exam certification preparation.

Huawei HCIP-Transmission V2.5 Sample Questions (Q118-Q123):

NEW QUESTION # 118

The nominal rate of the OTU4 signal is 111 809 973.568 kbit/s, and we generally think that the line rate is about 112G.

- A. False
- B. True

Answer: B

NEW QUESTION # 119

Which of the following statements about a ROADM site are true?

- A. It must be used when electrical-layer ASON is required.
- B. It must be used when optical-layer ASON is required.
- C. It supports automatic optical power adjustment
- D. It implements flexible adding and dropping of intra-site wavelengths.

Answer: B,C,D

Explanation:

A ROADM (Reconfigurable Optical Add-Drop Multiplexer) site is a key component in flexible optical networks. It allows the flexible adding and dropping of wavelengths within the site (A), enhancing network agility. It supports automatic optical power adjustment (B), which helps maintain signal quality across the network by balancing power levels and avoiding distortion. Also, when optical-layer ASON (Automatically Switched Optical Network) is required, ROADMs must be used (C) to provide dynamic wavelength routing and switching capabilities. However, ROADMs are not mandatory for electrical-layer ASON, so (D) is false. These features collectively enable efficient, dynamic optical networking with minimal manual intervention, critical in advanced transmission scenarios covered by HCIP-Transmission.

NEW QUESTION # 120

NEA and NEB are adjacent NEs. Which of the following performance events are reported by the NEA if day 3 and lower order bit errors occur in the direction A>day and day 1082.B3 and lower order bit errors occur in the direction B>A? (Multiple choice)

- A. RSFEBBE
- B. HPBBE
- C. MSBBE
- D. RSBBE
- E. MSFEBBE
- F. HPFEBBE

Answer: B,C,D,F

NEW QUESTION # 121

Which of the following description about 1+1 and 1:1 optical line protection is wrong? (Multiple choice)

- A. According to the location of the OLP board in the network, 1+1 optical line protection can be divided into 1+1OMS path protection and 1+1OTS path protection
- B. The main difference between 1:1 optical line protection and 1+1 optical line protection is whether the APS protocol is required
- C. The switching mode of 1:1 optical line protection can only be double-ended switching
- D. The protection boards used in 1+1 optical line protection and 1:1 optical line protection are the same

Answer: A,B,D

NEW QUESTION # 122

Which of the following descriptions about ROADM is correct? (Multiple choice)

- Answer: A,B,D**
