Identity-and-Access-Management-Architect Prep Guide Trustable Questions Pool Only at Pass4sureCert

2025 Latest Pass4sureCert Identity-and-Access-Management-Architect PDF Dumps and Identity-and-Access-Management-Architect Exam Engine Free Share: https://drive.google.com/open?id=1ax2nqd3GodOnrhh2seYQlgEdLj2vuhrm

Many companies think highly of Salesforce certifications, and they will spend money on employees' exam fee and preparation materials. They request executive staff to purchase valid Identity-and-Access-Management-Architect exam questions vce for engineers so that they clear exams and get certifications easily without too much time and energy. Many companies regard us as their good long-term cooperative partner and think highly of our Identity-and-Access-Management-Architect Exam Questions Vce.

Earning the Salesforce Certified Identity and Access Management Architect certification demonstrates to employers and clients that an individual has a deep understanding of Salesforce security architecture and can design and implement secure and scalable identity and access management solutions. Salesforce Certified Identity and Access Management Architect certification is an excellent investment for professionals who want to advance their careers in Salesforce architecture and security.

Salesforce Certified Identity and Access Management Architect certification is designed to validate a candidate's knowledge and skills in designing and implementing identity and access management solutions within Salesforce. Salesforce Certified Identity and Access Management Architect certification ensures that the candidate has a deep understanding of the Salesforce platform and can design and implement secure solutions that align with industry best practices.

Free Identity-and-Access-Management-Architect Exam Questions - Latest Identity-and-Access-Management-Architect Exam Camp

Thus, it will allow you to examine the Salesforce Identity-and-Access-Management-Architect Dumps before purchasing it. Pass4sureCert proudly presents the exceptional Salesforce Identity-and-Access-Management-Architect material that will meet your expectations. Beware that the sections of the exam change from time to time. Therefore, be alert by checking the updates frequently. It will prevent you from wasting time, material expenses, and inner peace.

Salesforce Certified Identity and Access Management Architect certification is a valuable credential that showcases a candidate's ability to design and implement security solutions that are specific to Salesforce. Identity-and-Access-Management-Architect Exam covers a range of topics, including authentication and authorization mechanisms, user management, and data security. Candidates must also be familiar with the various security features and functions of Salesforce, such as object-level security, field-level security, and record-level security.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q238-Q243):

NEW QUESTION # 238
Universal Containers wants to implement SAML SSO for their internal Salesforce users using a third-party IdP. After some evaluation, UC decides not to set up My Domain for their Salesforce org. How does that decision impact their SSO

implementation?

- A. Neither SP- nor IdP-initiated SSO will work.
- B. IdP-initiated SSO will not work.
- C. SP-initiated SSO will not work.
- D. Either SP- or IdP-initiated SSO will work.

Answer: A

NEW QUESTION # 239
Universal Containers (UC) is building a custom employee hut) application on Amazon Web Services (AWS) and would like to store their users' credentials there. Users will also need access to Salesforce for internal operations. UC has tasked an identity architect with evaluating Afferent solutions for authentication and authorization between AWS and Salesforce.
How should an identity architect configure AWS to authenticate and authorize Salesforce users?

- A. Configure the custom employee app as a connected app.
- B. Configure AWS as an OpenID Connect Provider.
- C. Develop a custom Auth server in AWS.
- D. Create a custom external authentication provider.

Answer: B

Explanation:
Explanation
To authenticate and authorize Salesforce users with AWS, the identity architect should configure AWS as an OpenID Connect Provider. OpenID Connect is a protocol that allows users to sign in with an external identity provider, such as AWS, and access Salesforce resources. To enable this, the identity architect needs to configure an OpenID Connect Authentication Provider in Salesforce and link it to a connected app. The other options are not relevant for this scenario. NEW QUESTION # 240
Universal Containers (UC) uses Salesforce for its customer service agents. UC has a proprietary system for order tracking which supports Security Assertion Markup Language (SAML) based single sign-on. The VP of customer service wants to ensure only active Salesforce users should be able to access the order tracking system which is only visible within Salesforce.
What should be done to fulfill the requirement?
Choose 2 answers

- A. Setup Salesforce as an identity provider (IdP) for order Tracking.
- B. Setup Order Tracking as a Canvas app in Salesforce to POST IdP initiated SAML assertion.
- C. Set up the Corporate Identity store as an identity provider (IdP) for Order Tracking,
- D. Customize Order Tracking to initiate a REST call to validate users in Salesforce after login.

Answer: A,B

Explanation:
Explanation
Single sign-on (SSO) is an authentication method that allows users to access multiple applications with one login and one set of credentials. SAML is an open standard for SSO that uses XML-based messages to exchange authentication and authorization information between an identity provider (IdP) and a service provider (SP). To fulfill the requirement, the following steps should be done:
Setup Salesforce as an identity provider (IdP) for order tracking. An IdP is the system that performs authentication and passes the user's identity and authorization level to the SP, which trusts the IdP and authorizes the user to access the requested resource. To set up Salesforce as an IdP, you need to enable the Identity Provider feature, download the IdP certificate, and configure the SAML settings.
Setup order tracking as a Canvas app in Salesforce to POST IdP initiated SAML assertion. A Canvas app is an application that can be embedded within a Salesforce page and interact with Salesforce data and APIs. To set up order tracking as a Canvas app, you need to create a connected app for order tracking in Salesforce, enable SAML and configure the SAML settings, such as the entity ID, ACS URL, and subject type. You also need to enable IdP initiated SAML assertion POST binding for the connected app, which allows Salesforce to initiate the SSO process by sending a SAML assertion to order tracking.

NEW QUESTION # 241
What are three capabilities of Delegated Authentication? Choose 3 answers

- A. It can connect to SOAP services.
- B. It can be assigned by Custom Permissions.
- C. It can be assigned by Permission Sets.
- D. It can be assigned by Profiles.
- E. It can connect to REST services.

Answer: A,C,E

Explanation:
The three capabilities of delegatedauthentication are:
* It can connect to SOAP services. Delegated authentication is a feature that allows Salesforce to delegate the authentication process to an external service by making a SOAP callout to a web service that verifies the user's credentials.This feature enables Salesforce to integrate with existing identity stores or authentication methods that support SOAP services.
* It can be assigned by permission sets. Permission sets are collections of settings and permissions that give users access to various tools and functions in Salesforce. Permission sets can be used to assign delegated authentication to users by enabling the "Is Single Sign-on Enabled" permission. This permission allows users to log in with delegated authentication instead of their Salesforce username and password.
* It can connect to REST services. REST services are web services that use HTTP methods to access or manipulate resources on a server. REST services can be used for delegated authentication by creating a custom login page that makes a REST callout to an external service that verifies the user's credentials.
This approach requires custom code and configuration, but it provides more flexibility and control over the authentication process.
The other options are not capabilities of delegated authentication. Delegated authentication cannot be assigned by custom permissions or profiles. Custom permissions are settings that can be used in Apex code or validation rules to check whether a user has access to a custom feature or functionality. Custom permissions cannot be used to enable delegated authentication for users.
Profiles are collections of settings and permissions that determine what users can do in Salesforce. Profiles cannot be used to enable delegated authentication for users,as this feature is controlled by permission sets. References: [Delegated Authentication], [Permission Sets], [Enable 'Delegated Authentication'], [REST Services], [Custom Login Page for Delegated Authentication], [Custom Permissions], [Profiles]

NEW QUESTION # 242
Universal containers uses an Employee portal for their employees to collaborate. employees access the portal from their company's internal website via SSO. It is set up to work with Active Directory. What is the role of Active Directory in this scenario?

- A. Identity store
- B. Authentication store
- C. Service provider
- D. Identity provider

Answer: D

Explanation:
The role of Active Directory in this scenario is an identity provider. An identity provider is an application that authenticates users and provides information about them to service providers6. A service provider is an application that provides a service to users and relies on an identity provider for authentication6. In thisscenario, the employee portal is a service provider that provides collaboration features to employees and relies on Active Directory for authentication. Active Directory is anidentity provider that authenticates employees using their corporate credentials and sends information about them to the employee portal7.
