

IDPX Study Test | IDPX Brindumps Pdf

IDPX PRACTICE TEST A

Which is NOT true about noise reduction between two rooms?

- A. Noise reduction increases with an increase in the transmission loss of the wall separating the two rooms.
- B. The stiffness of the wall can affect noise reduction.
- C. An increase in wall area separating the two rooms is detrimental.
- D. To improve noise reduction, the designer should place absorptive materials on both sides of the wall. - Answer- D

Which of the following is an air distribution system in which supply air originates at floor level and rises to return air grilles in the ceiling?

- A. floor ventilation
- B. displacement ventilation
- C. slot air ventilation
- D. demand control ventilation - Answer- B

If all of the following are present, what must be modified to achieve acoustic separation in a perimeter office?

- A. gypsum wallboard
- B. batt insulation
- C. acoustical tiles
- D. convactor - Answer- D.

In a new lifestyle hotel, the spa suites will have 4 poster canopy beds. How far away from the sprinkler heads should the beds and panels be?

- A. 6 inches
- B. 15 inches
- C. 12 inches
- D. 20 inches - Answer- D

HVAC stands for:

- A. Heating, Ventilating, and Air Conditioning
- B. Humidity, Ventilation, and Air Control
- C. Heating, Ventilation, And Cooling
- D. High Velocity Air Control - Answer- A

Which of the following is an INCORRECT statement about fire-rated door assemblies?

- A. Glass area is limited based on rating.
- B. Either hinges or rated pivots may be used.
- C. Under some circumstances a closer is not needed.
- D. Labeling is required for both the door and frame. - Answer- C

If a material supplier says that adding his product to a wall assembly in a critical acoustic situation would increase the noise reduction (STC rating) between two rooms by slightly more than 3 dB, what should the designer's reaction be?

Many customers may doubt the quality of our CIDQ IDPX learning quiz since they haven't tried them. But our IDPX training engine is reliable. What you have learnt on our Interior Design Professional Exam IDPX Exam Materials are going through special selection. The core knowledge of the real exam is significant.

The whole world of IDPX preparation materials has changed so fast in the recent years because of the development of internet technology. We have benefited a lot from those changes. In order to keep pace with the development of the society, we also need to widen our knowledge. If you are a diligent person, we strongly advise you to try our IDPX real test. You will be attracted greatly by our IDPX practice engine. .

>> IDPX Study Test <<

Perfect CIDQ IDPX Study Test Are Leading Materials & Trusted IDPX Brindumps Pdf

Now, the test syllabus of the IDPX exam is changing every year. More and more people choose to prepare the exam to improve their ability. So the IDPX exam becomes more difficult than before. For our experts, they are capable of seizing the tendency of the real exam. The questions and answers of our IDPX Guide materials will change every year according to the examination outlines.

And we always keep them to be the latest and accurate.

CIDQ IDPX Exam Syllabus Topics:

Topic	Details
Topic 1	• Project Assessment and Sustainability: This section of the exam measures skills of an Interior Design Consultant and covers understanding and evaluating square footage standards, environmental and wellness criteria, existing site conditions, and key project drivers such as client goals, culture, and budget.
Topic 2	• Professional Business Practices: This section of the exam measures skills of an Interior Design Consultant and addresses business structures, scope of practice, proposals, contracts, and basic project accounting. It prepares candidates to understand legal obligations, manage finances, and structure project proposals professionally.
Topic 3	• Project Process, Roles, and Coordination: This section of the exam measures the skills of a Project Design Manager and focuses on team roles, stakeholder engagement, budgeting, project timelines, and collaboration with allied professionals. It also includes managing deliverables, specifications, phased construction, and conducting post-occupancy evaluations.

CIDQ Interior Design Professional Exam Sample Questions (Q92-Q97):

NEW QUESTION # 92

A lien has been placed on a building. What may be a probable cause for this action?

- A. A subcontractor has not been paid by the general contractor
- B. The certificate of substantial completion has not been issued
- C. Contract documents do not comply with building code
- D. The client requires more financing

Answer: A

Explanation:

The NCIDQ IDPX exam tests the designer's understanding of construction administration, including the implications of a lien on a building. A lien is a legal claim placed on a property to secure payment for work or materials provided.

* Option A (A subcontractor has not been paid by the general contractor): This is the correct choice.

A common reason for a lien is non-payment. If a subcontractor has not been paid by the general contractor for work performed or materials supplied, they may file a mechanic's lien on the building to secure payment. This is a standard practice in construction to protect subcontractors and suppliers.

* Option B (The certificate of substantial completion has not been issued): The certificate of substantial completion marks the point at which the project is largely complete and the owner can occupy the space. While its issuance can affect payment schedules, it is not a direct cause of a lien. A lien is typically filed due to non-payment, not the status of substantial completion.

* Option C (The client requires more financing): The client's need for more financing might delay the project, but it does not directly result in a lien. A lien is filed by a party (e.g., subcontractor) seeking payment, not by the client.

* Option D (Contract documents do not comply with building code): Non-compliance with building codes can lead to permit issues or stop-work orders, but it does not directly cause a lien. A lien is related to payment disputes, not code compliance.

Verified Answer from Official Source:

The correct answer is verified from NCIDQ's official study materials on construction administration and legal issues in construction.

"A lien may be placed on a building if a subcontractor or supplier has not been paid for their work or materials, allowing them to secure payment through a legal claim on the property." (NCIDQ IDPX Study Guide, Construction Administration Section) The NCIDQ IDPX Study Guide identifies non-payment as a primary reason for a lien, such as when a subcontractor is not paid by the general contractor. This aligns with Option A, making it the most probable cause of the lien in this scenario.

Objectives:

- * Understand the implications of a lien in construction projects (NCIDQ IDPX Objective: Construction Administration).
- * Apply knowledge of payment disputes to identify legal issues (NCIDQ IDPX Objective: Professional Practice).

NEW QUESTION # 93

Which person is MOST responsible for ensuring that the construction drawings are code-compliant?

- A. Building inspector
- **B. Interior designer**
- C. Developer
- D. Building owner

Answer: B

Explanation:

The NCIDQ IDPX exam tests the designer's understanding of professional responsibilities, particularly regarding code compliance in construction drawings. Code compliance ensures that the design adheres to building codes, accessibility standards, and life safety regulations.

* Option A (Developer): The developer typically oversees the project's financial and logistical aspects, but they are not responsible for creating or ensuring the code compliance of construction drawings. This role focuses on project management, not design.

* Option B (Building owner): The building owner may be ultimately responsible for ensuring the building meets codes as part of their legal obligations, but they rely on the design team to produce compliant drawings. The owner does not create or directly verify the drawings.

* Option C (Interior designer): This is the correct choice. The interior designer, as the professional preparing the construction drawings (or overseeing their preparation), is most responsible for ensuring that the drawings comply with applicable codes, such as the International Building Code (IBC), ADA standards, and local regulations. This responsibility is part of the designer's role in producing a safe and compliant design.

* Option D (Building inspector): The building inspector reviews the drawings and construction for code compliance during permitting and inspections, but they do not create the drawings or ensure their compliance during the design phase. Their role is to verify, not to design.

Verified Answer from Official Source:

The correct answer is verified from NCIDQ's official study materials on professional responsibilities and code compliance.

"The interior designer is responsible for ensuring that construction drawings comply with all applicable building codes, accessibility standards, and regulations as part of their professional duty." (NCIDQ IDPX Study Guide, Codes and Standards Section) The NCIDQ IDPX Study Guide clearly states that the interior designer, as the creator of the construction drawings, is most responsible for ensuring code compliance during the design phase. This includes verifying that the drawings meet all relevant codes before submission for permitting, making Option C the correct answer.

Objectives:

* Understand the designer's role in ensuring code compliance (NCIDQ IDPX Objective: Codes and Standards).

* Apply professional responsibilities to produce compliant designs (NCIDQ IDPX Objective: Professional Practice).

NEW QUESTION # 94

During which phase is it BEST to consider integrating a security system in a project?

- A. construction documents
- B. permit review
- **C. schematic design**
- D. post-occupancy

Answer: C

Explanation:

Schematic design is the phase where conceptual layouts and systems integration, including security (e.g., cameras, access controls), are planned to align with the overall design intent. This allows coordination with architectural, electrical, and structural elements early on. Permit review (A) is too late, as systems should already be designed. Post-occupancy (B) occurs after completion, missing integration opportunities.

Construction documents (D) detail finalized plans, but security should be conceptualized earlier to avoid costly revisions. Schematic design is the optimal phase for initial system planning.

Verified Answer from Official Source: C - schematic design

"Security systems should be integrated during schematic design to ensure coordination with other building systems and design goals."

(NCIDQ IDPX Study Guide, Section 2: Project Coordination) Explanation from Official Source: The NCIDQ identifies schematic design as the stage for establishing system requirements, enabling efficient collaboration with consultants and avoiding later conflicts.

Objectives:

* Integrate building systems during design phases (IDPX Objective 2.6).

NEW QUESTION # 95

What method of payment for interior design services poses the least financial risk to the designer?

- A. retail sales-based fee
- **B. fixed design fee**
- C. value-based fee
- D. time-based fee

Answer: B

Explanation:

A fixed design fee provides a predetermined amount agreed upon upfront, ensuring the designer is paid regardless of project duration or unforeseen variables, minimizing financial risk. A time-based fee (A) depends on hours worked, risking non-payment if hours exceed client expectations. A value-based fee (C) ties payment to perceived project value, which is subjective and uncertain. A retail sales-based fee (D) relies on product sales, exposing the designer to market fluctuations. The fixed fee's predictability makes it the safest option for the designer.

Verified Answer from Official Source: B - fixed design fee

"A fixed design fee poses the least financial risk to the designer, as it establishes a set payment amount independent of time or project variables." (NCIDQ IDPX Study Guide, Section 5: Professional Practice) Explanation from Official Source: The NCIDQ emphasizes that fixed fees provide financial stability, protecting designers from scope creep or client disputes over hours or outcomes.

Objectives:

* Evaluate payment methods for design services (IDPX Objective 5.1).

NEW QUESTION # 96

During early planning stages of a sustainable project, which of the following elements are the MOST important to develop?

- A. Wind power and recycled content materials
- B. Composting toilets and renewable power sources
- **C. LED lighting and locally sourced materials**

Answer: C

Explanation:

The NCIDQ IDPX exam tests the designer's understanding of sustainable design principles, particularly during the early planning stages of a project. Sustainable design focuses on reducing environmental impact through energy efficiency, material selection, and other strategies.

* Option A (LED lighting and locally sourced materials): This is the correct choice. In the early planning stages, the designer should prioritize elements that have a significant impact on sustainability and are feasible to implement across most projects. LED lighting reduces energy consumption (a key sustainability goal) and is widely applicable. Locally sourced materials reduce transportation-related carbon emissions and support the local economy, making them a practical and impactful choice for early planning.

* Option B (Wind power and recycled content materials): Wind power is a renewable energy source, but it is a complex, site-specific solution that depends on factors like location and infrastructure, making it less practical for early planning in most projects. Recycled content materials are important but are typically considered later when specifying materials, not as a primary early planning element.

* Option C (Composting toilets and renewable power sources): Composting toilets are a niche solution that may not be feasible or acceptable for all projects (e.g., commercial buildings), and their implementation requires significant infrastructure changes. Renewable power sources (e.g., solar, wind) are also site-specific and complex, making them less critical in early planning compared to more universal strategies like lighting and material sourcing.

Correction of Typographical Error:

The original question lists only three options (A, B, C), but the NCIDQ format typically includes four options (A, B, C, D). The missing Option D does not affect the answer, as Option A is clearly the correct choice based on the given options. For completeness, a potential Option D might be something like "Rainwater harvesting and low-VOC paints," which would be incorrect as a primary early planning focus compared to LED lighting and locally sourced materials.

Verified Answer from Official Source:

The correct answer is verified from NCIDQ's official study materials on sustainable design and early project planning.

"In the early planning stages of a sustainable project, the designer should prioritize widely applicable strategies such as LED lighting for energy efficiency and locally sourced materials to reduce transportation emissions." (NCIDQ IDPX Study Guide, Sustainable Design Section) The NCIDQ IDPX Study Guide highlights LED lighting and locally sourced materials as key sustainable strategies that can be planned early due to their broad applicability and significant environmental impact. This aligns with Option A, making it

Objectives:

- NEW QUESTION # 97**

PassExamDumps provides you with tri-format prep material compiled under the supervision of 90,000 CIDQ professionals from around the world that includes everything you need to pass the CIDQ IDPX Exam on your first try. The preparation material consists of a PDF, practice test software for Windows, and a web-based practice exam. All of these preparation formats are necessary for complete and flawless preparation.
