

IDPX Test Certification Cost, IDPX Latest Braindumps Free

IDPX PRACTICE TEST A

Which is NOT true about noise reduction between two rooms?

- A. Noise reduction increases with an increase in the transmission loss of the wall separating the two rooms.
- B. The stiffness of the wall can affect noise reduction.
- C. An increase in wall area separating the two rooms is detrimental.
- D. To improve noise reduction, the designer should place absorptive materials on both sides of the wall. - Answer- D

Which of the following is an air distribution system in which supply air originates at floor level and rises to return air grilles in the ceiling?

- A. floor ventilation
- B. displacement ventilation
- C. slot air ventilation
- D. demand control ventilation - Answer- B

If all of the following are present, what must be modified to achieve acoustic separation in a perimeter office?

- A. gypsum wallboard
- B. batt insulation
- C. acoustical tiles
- D. convactor - Answer- D.

In a new lifestyle hotel, the spa suites will have 4 poster canopy beds. How far away from the sprinkler heads should the beds and panels be?

- A. 6 inches
- B. 15 inches
- C. 12 inches
- D. 20 inches - Answer- D

HVAC stands for:

- A. Heating, Ventilating, and Air Conditioning
- B. Humidity, Ventilation, and Air Control
- C. Heating, Ventilation, And Cooling
- D. High Velocity Air Control - Answer- A

Which of the following is an INCORRECT statement about fire-rated door assemblies?

- A. Glass area is limited based on rating.
- B. Either hinges or rated pivots may be used.
- C. Under some circumstances a closer is not needed.
- D. Labeling is required for both the door and frame. - Answer- C

If a material supplier says that adding his product to a wall assembly in a critical acoustic situation would increase the noise reduction (STC rating) between two rooms by slightly more than 3 dB, what should the designer's reaction be?

DOWNLOAD the newest Itexamguide IDPX PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1PVEenX7KyphaxIvrFKV47cxKWeEbV3j>

If you are still hesitating about whether you can get IDPX certification through the exam, we believed that our IDPX study materials will be your best choice, it will tell you that passing the exam is no longer a dream for you, and it will be your best assistant on the way to passing the exam. Tens of thousands of our customers have benefited from our IDPX Exam Braindumps and got their certifications. So you will as long as you choose to buy our IDPX practice guide.

IDPX exam questions are being offered in three easy-to-use and compatible formats. The CIDQ IDPX PDF dumps file, desktop practice test software, and web-based practice test software. All three IDPX Exam Questions format contain the CIDQ IDPX actual questions and help you in IDPX exam preparation entirely.

>> IDPX Test Certification Cost <<

IDPX Latest Braindumps Free - IDPX Authorized Test Dumps

Of course, we also need to realize that it is very difficult for a lot of people to pass the exam without valid IDPX study materials in a short time, especially these people who have not enough time to prepare for the exam, that is why many people need to choose the best and most suitable IDPX Study Materials as their study tool. We believe that if you have the good IDPX study materials when

you are preparing for the exam, it will be very useful and helpful for you to pass exam and gain the related certification successfully.

CIDQ Interior Design Professional Exam Sample Questions (Q103-Q108):

NEW QUESTION # 103

Which type of mechanical heating system uses pipes or tubing embedded within the ceiling, floor, or wall construction?

- A. radiant
- B. forced-air
- C. electric
- D. hot-water

Answer: A

Explanation:

Radiant heating systems use pipes or tubing embedded in floors, walls, or ceilings to circulate hot water or electric elements, transferring heat directly to surfaces and occupants via radiation. Electric (A) refers to a power source, not a system type, and could include radiant but isn't specific. Hot-water (C) describes the medium, not the delivery method, and could apply to radiators, not embedded systems. Forced-air (D) uses ducts and air circulation, not embedded pipes. Radiant (B) precisely matches the description of embedded tubing for heating, common in modern design for efficiency and comfort.

Verified Answer from Official Source: B - radiant

"Radiant heating systems utilize pipes or tubing embedded within floors, walls, or ceilings to provide heat through radiation."

(NCIDQ IDPX Study Guide, Section 2: Building Systems) Explanation from Official Source: The NCIDQ identifies radiant systems as a distinct mechanical heating method, valued for even heat distribution and energy efficiency, often integrated into interior surfaces.

Objectives:

* Understand mechanical system types (IDPX Objective 2.9).

NEW QUESTION # 104

What is the PRIMARY reason to maintain a master submittal log on a project?

- A. Facilitate distribution and timely review
- B. Document the installation schedule
- C. Confirm adherence to the contract
- D. Verify compliance with specifications

Answer: A

Explanation:

The NCIDQ IDPX exam tests the designer's understanding of the submittal process during contract administration. A master submittal log is a tracking tool used to manage the submission, review, and approval of submittals (e.g., product data, shop drawings) throughout the project.

* Option A (Confirm adherence to the contract): While the submittal process itself helps confirm adherence to the contract, the master submittal log's primary role is not to confirm adherence but to manage the process of reviewing submittals.

* Option B (Document the installation schedule): The installation schedule is typically documented in the project schedule, not the submittal log. The log tracks submittal reviews, not installation timelines.

* Option C (Verify compliance with specifications): Verifying compliance with specifications is a goal of the submittal review process, but the master submittal log's primary purpose is to manage the workflow, not to perform the verification itself.

* Option D (Facilitate distribution and timely review): This is the correct choice. The primary purpose of a master submittal log is to track the status of all submittals, ensuring they are distributed to the appropriate parties (e.g., designer, owner) and reviewed in a timely manner. This helps keep the project on schedule by preventing delays in the approval process.

Verified Answer from Official Source:

The correct answer is verified from NCIDQ's official study materials on contract administration and submittal management.

"A master submittal log is maintained to facilitate the distribution and timely review of submittals, ensuring that the approval process does not delay the project schedule." (NCIDQ IDPX Study Guide, Contract Administration Section) The NCIDQ IDPX Study Guide specifies that the primary purpose of a master submittal log is to manage the distribution and review process, ensuring efficiency and timeliness. This aligns with Option D, making it the correct answer.

Objectives:

* Understand the role of a master submittal log in contract administration (NCIDQ IDPX Objective: Contract Administration).

* Apply project management tools to ensure timely reviews (NCIDQ IDPX Objective: Project Management).

NEW QUESTION # 105

What is the MINIMUM fire rating for a door in a 2-hour fire separation wall?

- A. 3/4-hour
- B. 1-hour
- C. 2-hours
- **D. 1 1/2-hours**

Answer: D

Explanation:

The NCIDQ IDPX exam tests the designer's knowledge of fire safety requirements, specifically those outlined in the International Building Code (IBC), which is referenced for determining fire ratings of building components. A fire separation wall with a 2-hour rating requires doors that meet specific fire resistance standards.

* IBC Requirements: According to the IBC (2018 Edition), Section 716.5, the fire rating of a door (fire door) in a fire-rated wall must be at least 3/4 of the wall's rating, with a minimum rating of 45 minutes (3/4-hour) and a maximum requirement of 3 hours. For a 2-hour fire-rated wall:

* $3/4$ of 2 hours = 1.5 hours (1 1/2 hours).

* Therefore, the door must have a minimum fire rating of 1 1/2 hours.

* Option A (3/4-hour): A 3/4-hour (45-minute) rating is the minimum for doors in 1-hour fire-rated walls, not 2-hour walls, so this is insufficient.

* Option B (1-hour): A 1-hour rating is also insufficient, as it does not meet the 3/4 requirement for a 2-hour wall (1.5 hours).

* Option C (1 1/2-hours): This meets the IBC requirement of 3/4 of the wall's rating (1.5 hours) for a 2-hour fire separation wall, making it the correct minimum fire rating for the door.

* Option D (2-hours): While a 2-hour rating exceeds the minimum requirement, it is not necessary, as the IBC allows a 1 1/2-hour rating for a 2-hour wall. A 2-hour rated door may be used but is not the minimum required.

Verified Answer from Official Source:

The correct answer is verified from the International Building Code, as referenced in NCIDQ IDPX study materials.

"Fire door assemblies in fire walls or fire barriers with a fire-resistance rating greater than 1 hour but less than 4 hours shall have a minimum fire-protection rating of 1 1/2 hours." (International Building Code, 2018 Edition, Section 716.5, Table 716.5) The IBC specifies that for a 2-hour fire-rated wall, the minimum fire rating for a door is 1 1/2 hours, as outlined in Table 716.5. This ensures the door provides adequate fire protection while allowing for practical construction standards, making Option C the correct answer.

Objectives:

- * Understand fire rating requirements for building components (NCIDQ IDPX Objective: Codes and Standards).
- * Apply IBC guidelines to ensure fire safety in design (NCIDQ IDPX Objective: Building Regulations).

NEW QUESTION # 106

When estimating the total FF&E costs for installation, maintenance, and replacement, which of the following is being completed?

- **A. Life-cycle costing**
- B. Planned value
- C. Actual costs
- D. Cost-benefit analysis

Answer: A

Explanation:

The NCIDQ IDPX exam tests the designer's understanding of cost estimation methods, particularly for FF&E (furniture, fixtures, and equipment). The question focuses on a method that considers costs over the entire lifespan of the items.

* Option A (Actual costs): Actual costs refer to the real, incurred costs of a project, typically determined after expenses are recorded. This does not involve estimating future costs like maintenance and replacement.

* Option B (Planned value): Planned value is a project management term related to earned value management, representing the budgeted cost of work scheduled. It does not specifically address FF&E maintenance and replacement costs over time.

* Option C (Life-cycle costing): Life-cycle costing is the process of estimating the total cost of an item over its entire lifespan, including initial purchase, installation, maintenance, and replacement. This method is directly applicable to FF&E, as it ensures the designer considers long-term costs, not just the initial purchase price, making it the correct answer.

* Option D (Cost-benefit analysis): Cost-benefit analysis compares the costs of a project or decision to its benefits, often to justify a project. While it may include some cost estimates, it is not specifically focused on the lifecycle costs of FF&E.

Verified Answer from Official Source:

The correct answer is verified from NCIDQ's official study materials on FF&E cost estimation.

"Life-cycle costing involves estimating the total cost of FF&E over its lifespan, including installation, maintenance, and replacement, to inform budgeting decisions." (NCIDQ IDPX Study Guide, FF&E Section) The NCIDQ IDPX Study Guide defines life-cycle costing as the method for estimating the full cost of FF&E over time, which directly aligns with the question's focus on installation, maintenance, and replacement costs.

Option C is the correct term for this process.

Objectives:

* Understand cost estimation methods for FF&E (NCIDQ IDPX Objective: FF&E).

* Apply life-cycle costing to inform budgeting decisions (NCIDQ IDPX Objective: Project Management).

NEW QUESTION # 107

Which space would MOST likely have a dedicated HVAC system?

- A. lobby of a healthcare center
- B. an office in a high rise
- C. computer room in a school

Answer: C

Explanation:

A computer room (e.g., server room) requires a dedicated HVAC system to maintain precise temperature and humidity control, protecting sensitive equipment from heat and static, per ASHRAE standards. An office in a high rise (A) typically uses a central HVAC system shared across floors. A healthcare lobby (C) relies on general building HVAC, not a dedicated unit, unless critical (e.g., isolation). Computer rooms (B) have unique cooling demands, making a dedicated system most likely.

Verified Answer from Official Source: B - computer room in a school

"Computer rooms most likely require dedicated HVAC systems to ensure consistent environmental control for equipment performance." (NCIDQ IDPX Study Guide, Section 2: Building Systems) Explanation from Official Source: The NCIDQ highlights dedicated HVAC for spaces with specialized needs, like computer rooms, to prevent damage and ensure operational reliability.

Objectives:

* Integrate specialized building systems (IDPX Objective 2.9).

NEW QUESTION # 108

.....

We strongly recommend using our Interior Design Professional Exam (IDPX) exam dumps to prepare for the CIDQ IDPX certification. It is the best way to ensure success. With our Interior Design Professional Exam (IDPX) practice questions, you can get the most out of your studying and maximize your chances of passing your Interior Design Professional Exam (IDPX) exam.
