Please be assured that with the help of Acquia-Certified-Site-Builder-D8 learning materials, you will be able to successfully pass the exam.

Acquia Certified Site Builder - Drupal 8 Sample Questions (Q12-Q17):

NEW QUESTION # 12

You've been asked to add several new fields and a view for the news area of a site with a very busy comments section. The QA team wants to review your work in staging before rolling everything out to production all at once.

How can you meet these requirements without interfering with the production site's comment activity or having to create the new functionality independently in both environments?

- A. Configuration created in the staging environment is automatically available to the production environment since they share a database
- B. Create the fields and view in a fresh installation of Drupal core. Export the site configuration into your site's existing codebase, push the code to the staging environment, and import the site configuration there. Once QA is satisfied, repeat the process in production.
- C. Copy the production database into the staging environment. Create the fields and view there. Once QA is satisfied, copy the staging database into the production environment.
- D. Create the fields and view in a development copy of the site. Export the site configuration to code. Push that code to the staging environment and import the site configuration there. Once QA is satisfied, repeat the process in production.

Answer: B

NEW QUESTION # 13

You are running a Drupal 8 site, and the Status report page shows two errors that there is a security update available for your version of Drupal, and that the trusted_host_patterns setting is not configured in settings.php. What are the next steps to solve these errors?

- A. Update Drupal core and enable the Trusted Host Settings module.
- B. Update Drupal core. This will fix both errors, since updating Drupal automatically updates settings.php.
- C. Update Drupal core, using the "update settings" option.
- D. Update Drupal core and configure the trusted_host_patterns setting in your settings.php file.

Answer: D

NEW QUESTION # 14

An English language site is being translated to add Spanish and German versions, and you want to make it as easy as possible for Spanish or German speakers to see the correct translation.

What are three methods for displaying a translated page to a site visitor without using custom code? Choose 3 answers.

- A. Turn on the "User" detection method, to follow the user's language preference.
- B. Create a splash page with a List of available languages.
- C. Set up path prefixes or domains for each language, and enable the option to select the language from the URL.
- D. Enable geolocation and load the language based on the location of the site visitor's request.
- E. Enable the option to detect the language from the browser's language settings.

Answer: A,B,E

NEW QUESTION # 15

The marketing department wants to drive social engagement by collecting users' social profile links every time they comment on a blog post. You've been asked to make sure that this only happens on blog post comments; comments on other content types should not collect this information. How can you make this possible?

- A. In the blog post content type's "Manage form display" section, go to the settings for the "Comment" field and select "collect social profile information."
- B. Add custom fields for collecting social profile links to the default comment type. When configuring each field's visibility settings, go to "Content types" and make sure only the blog post content type is selected.
- C. Custom comment types per content type are not supported in Drupal 8.
- D. Create a custom comment type with the appropriate custom fields for collecting social profile links. Add a Comments field to the blog post content type, making sure it uses your new custom comment type.

Answer: D

NEW QUESTION # 16

You are building a site and have placed custom blocks in regions. After some time, you decide to install a new contributed theme, and set it as the default for the site. After switching to the new theme, you notice that many of your blocks have disappeared. What is the likely reason for this?

- A. The new theme only allows system blocks, not custom blocks.
- B. The blocks were built in such a way that they are not compatible with the new theme. They need to be re-created.
- C. The new theme's regions have different names from the regions in the old theme. Those blocks have been disabled.
- D. The blocks have not yet been registered with the new theme.

Answer: C
