

Integration-Architect Reliable Exam Cost & Integration-Architect Exams

BONUS!!! Download part of Test4Engine Integration-Architect dumps for free: https://drive.google.com/open?id=1EQWNWnU06kM6j4lhDjv2b2BE_29YFcOQ

Test4Engine promises up to 365 days of free Integration-Architect real exam questions updates. You will instantly get our free Integration-Architect actual questions updates in case of any update in the examination content by the Salesforce Certification Exams. These are excellent offers. Download updated Integration-Architect Exam Questions and begin your Salesforce Certified Integration Architect Integration-Architect certification test preparation journey today. Best of Luck!

The first goal of our company is to help all people to pass the Integration-Architect exam and get the related certification in the shortest time. Through years of concentrated efforts of our excellent experts and professors, our company has compiled the best helpful and useful Integration-Architect test training materials, and in addition, we can assure to everyone that our Integration-Architect Study Materials have a higher quality than other study materials in the global market. The Integration-Architect learn prep from our company has helped thousands of people to pass the exam and get the related certification.

>> Integration-Architect Reliable Exam Cost <<

Pass Guaranteed 2025 Salesforce Marvelous Integration-Architect: Salesforce Certified Integration Architect Reliable Exam Cost

For most users, access to the relevant qualifying examinations may be the first, so many of the course content related to qualifying examinations are complex and arcane. According to these ignorant beginners, the Integration-Architect exam questions set up a series of basic course, by easy to read, with corresponding examples to explain at the same time, the Integration-Architect study question let the user to be able to find in real life and corresponds to the actual use of Integration-Architect learned knowledge. And it will only takes 20 to 30 hours for them to pass the Integration-Architect exam.

Salesforce Certified Integration Architect Sample Questions (Q95-Q100):

NEW QUESTION # 95

Which three considerations should an Integration Architect consider when recommending Platform Event as a Integration solution? Choose 3 answers

- A. Inability to query event messages using SOQL
- B. Subscribe to an AssetToken Event stream to monitor OAuth2.0 authentication activity. C
- C. Inability to create a Lightning record page for platform events.
- D. When you delete an event definition, it's permanently removed and can't be restored.
- E. You can use Event Monitoring to track user activity, such as logins and running reports.

Answer: A,C,D

Explanation:

These are three considerations that an Integration Architect should consider when recommending Platform Event as an Integration solution. Platform Events are a type of event-driven architecture that allows you to publish and subscribe to custom events in Salesforce and external systems. Platform Events have some limitations and features that an Integration Architect should be aware of, such as:

Inability to query event messages using SOQL. Platform Events are not stored in Salesforce database, but in an event bus that retains them for 24 hours. You cannot use SOQL to query event messages, but you can use the EventLogFile object or the Event Monitoring feature to access them.

Inability to create a Lightning record page for platform events. Platform Events are not standard or custom objects, but a special type of sObject that can be inserted into the event bus. You cannot create a Lightning record page for platform events, but you can use Apex triggers, Lightning web components, or CometD clients to subscribe to them.

When you delete an event definition, it's permanently removed and can't be restored. An event definition is a metadata type that defines the schema and properties of a platform event message. You can create or modify event definitions in Salesforce Setup or using Metadata API. However, if you delete an event definition, it's permanently removed from your org and can't be restored. You also lose access to any event messages that use that event definition.

NEW QUESTION # 96

Northern Trail Outfitters is seeking to improve the performance and security of outbound integrations from Salesforce to on-premise servers.

What should the Architect consider before recommending a solution?

- A. A Default gateway restrictions
- B. Considerations for using Deterministic Encryption
- **C. External gateway products in use**
- D. Shield Platform Encryption Limitations

Answer: C

Explanation:

Option A is correct because external gateway products in use can affect the performance and security of outbound integrations from Salesforce to on-premise servers. External gateway products are software or hardware devices that act as intermediaries between Salesforce and the on-premise servers, such as firewalls, proxies, load balancers, or VPNs. They can have different configurations, features, and limitations that can impact the speed, reliability, and security of the data transmission. For example, some external gateway products may require authentication, encryption, or compression of the data, which can add overhead and latency to the integration. Some external gateway products may also have bandwidth or throughput limits, which can affect the scalability and availability of the integration. Therefore, the architect should consider the external gateway products in use before recommending a solution.

Option B is incorrect because a default gateway restriction is not a factor that can affect the performance and security of outbound integrations from Salesforce to on-premise servers. A default gateway restriction is a feature that allows administrators to restrict outbound requests from Salesforce to a specific IP address or domain name. This can help prevent unauthorized or malicious requests from Salesforce to external systems.

However, this feature does not affect the performance or security of the outbound requests themselves, as it only acts as a filter for the destination of the requests.

Option C is incorrect because considerations for using deterministic encryption are not relevant for outbound integrations from Salesforce to on-premise servers. Deterministic encryption is a type of encryption that produces the same ciphertext for the same plaintext input. This can help preserve some functionality and performance of encrypted data in Salesforce, such as filtering, sorting, and indexing. However, deterministic encryption is not applicable for outbound integrations from Salesforce to on-premise servers, as it is only supported for custom fields and not for standard fields or attachments. Moreover, deterministic encryption does not affect the security of the data transmission itself, as it only encrypts the data at rest in Salesforce.

Option D is incorrect because Shield Platform Encryption limitations are not relevant for outbound integrations from Salesforce to on-premise servers. Shield Platform Encryption is a feature that allows administrators to encrypt sensitive data at rest in Salesforce using AES 256-bit encryption. This can help protect data from unauthorized access or theft. However, Shield Platform Encryption limitations are not relevant for outbound integrations from Salesforce to on-premise servers, as they only affect the functionality and performance of encrypted data in Salesforce, such as searching, reporting, or validation rules. Shield Platform Encryption does not affect the security of the data transmission itself, as it only encrypts the data at rest in Salesforce.

NEW QUESTION # 97

Universal Containers (UC) is a leading provider of management training globally, UC embarked on a Salesforce transformation journey to allow students to register for courses in the Salesforce community. UC has a learning system that masters all courses and student registration.

UC requested a near real-time feed of student registration from Salesforce to the learning system. The integration architect recommends using Salesforce event.

Which API should be used for the Salesforce platform event solution?

- **A. Streaming API**
- B. Tooling API
- C. SOAP API
- D. O REST AP

Answer: A

Explanation:

The API that should be used for the Salesforce platform event solution is Tooling API. Tooling API is a specialized API that exposes metadata used in developer tooling that you can access through REST or SOAP. You can use Tooling API to create, update, or delete platform event definitions and fields. Streaming API is used to subscribe to platform events and receive notifications when they are published. References: Platform Events Developer Guide | Salesforce Developers, Define and Publish Platform Events Unit | Salesforce Trailhead QUESTION NO: 241 Northern Trail Outfitters is in the final stages of merging two Salesforce orgs but needs to keep the retiring org available for a short period of time for lead management as it is connected to multiple public web site forms. The sales department has requested that new leads are available in the new Salesforce instance within 30 minutes.

NEW QUESTION # 98

Universal Containers is a global financial company that sells financial products and services including, bank accounts, loans, and insurance. UC uses Salesforce Service cloud to service their customer via calls, live chat.

The support agents would open bank accounts on the spot for customers who are inquiring about UC bank accounts.

UC Core banking system is the system of record for bank accounts and all accounts opened in Salesforce have to be synced in real-time to the core banking system. Support agents need to inform the customers with the newly created bank account ID which has to be generated from the core banking system.

Which integration pattern is recommended for this use case?

- A. Use outbound message.
- **B. Use request and reply.**
- C. Use streaming API to generate push topic.
- D. Use Salesforce platform event.

Answer: B

Explanation:

Explanation

Using request and reply is the recommended integration pattern for this use case because it allows the support agents to send a request to the core banking system and receive a response with the bank account ID in real-time. This way, the support agents can inform the customers with the newly created bank account ID without any delay or inconsistency. Using streaming API to generate push topic is not a good solution because it is used for event-driven integration, not for web-service integration. Using outbound message is also not a good solution because it is a Salesforce-specific feature that uses SOAP web services, which may not be compatible with the core banking system. Using Salesforce platform event is also not a good solution because it is used for event-driven integration, not for web-service integration. NEW QUESTION # 99

Northern Trail Outfitters needs to present shipping costs and estimated delivery times to their customers.

Shipping services used vary by region, and have similar but distinct service request parameters.

Which integration component capability should be used?

- A. Outbound Messaging to request costs and delivery times from Shipper delivery services with automated error retry.
- B. Enterprise Service Bus user interface to collect shipper-specific form data.

- C. APEX REST Service to implement routing logic to the various shipping service.
- D. Enterprise Service Bus to determine which shipping service to use, and transform requests to the necessary format.

Answer: D

Explanation:

Explanation

Using an Enterprise Service Bus (ESB) to determine which shipping service to use, and transform requests to the necessary format is a good solution because it can provide routing, transformation, mediation, and orchestration capabilities for integrating different services. An ESB can also abstract the complexity and heterogeneity of the services from the client application, which simplifies the integration. Using Outbound Messaging to request costs and delivery times from Shipper delivery services with automated error retry is not a good solution because Outbound Messaging is a Salesforce-specific feature that uses SOAP web services, which may not be compatible with all shipping services. Using APEX REST Service to implement routing logic to the various shipping service is also not a good solution because it can introduce performance and scalability issues, as well as increase the maintenance cost and complexity of the code. Using Enterprise Service Bus user interface to collect shipper-specific form data is not a valid option because an ESB does not have a user interface component. NEW QUESTION # 100

.....

To go with the changing neighborhood, we need to improve our efficiency of solving problems, which reflects in many aspect as well as dealing with Integration-Architect exams. Our Integration-Architect practice materials can help you realize it. To those time-sensitive exam candidates, our high-efficient Integration-Architect Actual Tests comprised of important news will be best help. Only by practicing them on a regular base, you will see clear progress happened on you. You can download Integration-Architect exam questions immediately after paying for it, so just begin your journey toward success now
