100% Pass Quiz Salesforce - Newest Integration-Architect - Salesforce Certified Integration Architect Reliable Test Duration

We often receive news feeds and what well-known entrepreneurs have done to young people. The achievements of these entrepreneurs are the goals we strive for and we must value their opinions. And you may don't know that they were also benefited from our Integration-Architect study braindumps. We have engaged in this career for over ten years and helped numerous entrepreneurs achieved their Integration-Architect certifications toward their success. Just buy our Integration-Architect learning materials and you will become a big man as them.

Salesforce Certified Integration Architect Sample Questions (Q80-Q85):

NEW QUESTION # 80

What is the first thing an Integration Architect should validate if a callout from a LightningWeb Component to an external endpoint is failing?

- A. The endpoint URL has been added to Content Security Policies.
- B. The endpoint URL has added been to an outbound firewall rule.
- **C. The endpoint URL has been added to Remote Site Settings.**
- D. The endpoint domain has been added to Cross-Origin Resource Sharing.

Answer: C

Explanation:

Explanation

The first thing an integration architect should validate if a callout from a Lightning Web Component to an external endpoint is failing is the endpoint domain has been added to Cross-Origin Resource Sharing (CORS).

CORS is a mechanism that allows web browsers to make requests to servers on different origins, such as different domains, protocols, or ports. CORS requires the server to send back a special header that indicates whether the browser is allowed to access the resource or not. If the endpoint domain is not added to the CORS whitelist in Salesforce, the browser will block the callout and throw an error. Option B is not correct because Content Security Policies (CSP) are used to control what resources can be loaded on a Visualforce or Lightning page, such as scripts, stylesheets, images, etc. CSP does not affect the callout from a Lightning Web Component to an external endpoint. Option C is not correct because outbound firewall rules are used to restrict the network traffic from Salesforce to external systems. Firewall rules are configured at the network level, not at the Salesforce level. Option D is not correct because Remote Site Settings are used to specify the domains that are allowed for callouts from Apex code, not from Lightning Web Components. References:

Working with CORS and CSP to Call APIs from LWC

[Cross-Origin Resource Sharing (CORS)]

NEW QUESTION # 81

Universal Containers is a global financial company that sells financial products and services.

There is a daily scheduled Batch Apex job that generates invoice from a given set of orders.

UC requested building a resilient integration for this batch apex job in case the invoice generation fails.

What should an integration architect recommend to fulfill the requirement?

- A. Build Batch Retry & Error Handling in the middleware.
- **B. Build Batch Retry & Error Handling using BatchApexErrorEvent.**
- C. Build Batch Retry & Error Handling in the Batch Apex Job itself.
- D. Batch Retry & Error Handling report to monitor the error handling.

Answer: B

NEW QUESTION # 82

A company accepts payment requests 24x7. Once they accept a payment request, their service level agreement (SLA) requires them to make sure each payment request is processed by their Payment System. They track payment requests using a globally unique identifier created at the Data Entry Point. Their simplified flow is as shown in the diagram.

They encounter intermittent update errors when two or more processes try to update the same Payment Request record at the same time.

Which two recommendations should an integration architect make to improve their SLA and update conflict handling?

Choose 2 answers

- **A. Middleware should coordinate request delivery and payment processing.**
- B. Data Entry Point and Middleware should automatically retry requests.
- **C. Payment System should process a payment request only once.**
- D. Payment System and Middleware should automatically retry requests.

Answer: A,C

NEW QUESTION # 83

Which two approaches will require the least amount of development effort?

Choose 2 answers

- A. Use the tooling API with Process Builder to insert leads in real time.
- **B. Use the Composite REST API to aggregate multiple leads in a single call.**
- C. Call the Salesforce REST API to insert the lead into the target system.
- **D. Configure named credentials in the source org.**

Answer: B,D

Explanation:

The two approaches that will require the least amount of development effort are configuring named credentials in the source org and

using the Composite REST API to aggregate multiple leads in a single call.

Named credentials are a type of metadata that store authentication information for accessing external services, such as the target Salesforce org. By using named credentials, you can simplify the code for making callouts and avoid hardcoding credentials or tokens. The Composite REST API is a resource that allows you to execute multiple REST API requests in a single call. You can use the Composite REST API to create, update, or delete up to 25 records in one request. This can reduce the number of API calls and improve performance.

NEW QUESTION # 84

A call center manager uses a custom dashboard to track Case related metrics. The manager wants a component to display the number of closed Cases in real time.

What type of event should be used to meet this requirement?

- A. Generic Event
- B. Platform Event
- C. Change Data Capture Event
- D. Push Topic Event

Answer: C

Explanation:

Explanation

Change Data Capture Event is the best option to meet this requirement. Change Data Capture Event is a type of streaming event that notifies subscribers of changes to Salesforce records, such as creation, update, delete, and undelete operations¹. By subscribing to Change Data Capture Event for the Case object, the dashboard component can receive real-time updates on the number of closed Cases. Push Topic Event is another type of streaming event that notifies subscribers of changes to Salesforce records that match a SOQL query². However, Push Topic Event has some limitations, such as not supporting all SOQL features and not capturing delete and undelete operations³. Platform Event is a type of streaming event that delivers custom notifications within the Salesforce platform or from external sources⁴. Platform Event is not suitable for this requirement because it is not tied to Salesforce records and requires custom logic to publish and subscribe. Generic Event is a type of streaming event that sends custom JSON notifications to subscribers without a predefined schema⁵. Generic Event is not suitable for this requirement because it is not tied to Salesforce records and requires custom logic to publish and subscribe.

NEW QUESTION # 85

.....

As we entered into such a web world, cable network or wireless network has been widely spread. That is to say, it is easier to find an online environment to do your practices. This version of Integration-Architect test prep can be used on any device installed with web browsers. We specially provide a timed programming test in this online test engine, and help you build up confidence in a timed exam. With limited time, you need to finish your task in Integration-Architect Quiz guide and avoid making mistakes, so, considering your precious time, we also suggest this version that can help you find out your problems immediately after your accomplishment.
