Integration-Architect exam covers a wide range of topics, including data modeling, data integration, security, performance, and scalability. Integration-Architect Exam consists of multiple-choice questions and is timed at 120 minutes.

Salesforce Certified Integration Architect Sample Questions (Q35-Q40):

NEW QUESTION # 35

Which WSDL should an architect consider when creating an integration that might be used for more than one Salesforce organization and different metadata?

- A. Corporate WSDL
- B. SOAP API WSDL
- C. Enterprise WSDL
- **D. Partner WSDL**

Answer: D

Explanation:

Explanation

The Partner WSDL is the best option for creating an integration that might be used for more than one Salesforce organization and different metadata. The Partner WSDL is loosely typed and can reflect against any configuration of Salesforce. It is static and does not change if modifications are made to an organization's Salesforce configuration. Therefore, it is more flexible and adaptable than the Enterprise WSDL, which is strongly typed and bound to a specific configuration of Salesforce. References: Differences between Salesforce provided WSDL files

NEW QUESTION # 36

Northern Trail Outfitters (NTO) has an affiliate company that would like immediate notifications of changes to opportunities in the NTO Salesforce instance. The affiliate company has a CometD client available.

Which solution is recommended in order to meet the requirement?

- A. Configure External Services to call the subscriber in Apex in the Onchange Trigger event as part of the flow.
- B. Implement a polling mechanism in the client that calls the SOAP API getUpdated method to get the ID values of each updated record.
- **C. Create a PushTopic update event on the Opportunity Object to allow the subscriber to react to the streaming API.**
- D. Create a connected app in the affiliate org and select the "Accept CometD API Requests".

Answer: C

NEW QUESTION # 37

A large enterprise customer operating in a high regulated industry is planning to implement Salesforce for customer facing associates in both Sales and Service, and back-office staff. The business processes that Salesforce supports are critical to the business.

Salesforce will be integrated to multiple back-office systems to provide a single interface for associates.

Reliability and monitoring of these integrations are required as associates support customers.

Which integration solution should the architect consider when planning the implementation?

- **A. Leverage Middleware for all back-office system integrations ensuring real time alerting, monitoring and reporting capabilities.**
- B. Decouple back-office system callouts into separate distinct services that have inbuilt error logging and monitoring frameworks.
- C. Build a custom integration gateway to support back-office system integrations and ensure reliability and monitoring capabilities.
- D. Architect Services in back-office systems to support callouts from Salesforce and build reliability, monitoring and reporting capabilities.

Answer: A

Explanation:

Explanation

Leveraging Middleware for all back-office system integrations ensuring real time alerting, monitoring and reporting capabilities is the best integration solution for this scenario. Middleware is a software layer that acts as an intermediary between Salesforce and other systems, providing a common platform for data transformation, routing, orchestration, security, error handling, logging, and monitoring. Middleware can help to ensure reliability and performance of the integrations, as well as provide visibility and control over the integration processes. Middleware can also support various integration patterns and protocols, such as SOAP, REST,

NEW QUESTION # 38

A global financial company sells financial products and services that include the following:

1. Bank Accounts
2. Loans
3. Insurance

The company has a core banking system that is state of the art and is the master system to store financial transactions, financial products and customer information. The core banking system currently processes 10M financial transactions per day. The CTO for the company is considering building a community port so that customers can review their bank account details, update their information and review their account financial transactions.

What should an integration architect recommend as a solution to enable customer community users to view their financial transactions?

- A. Use Salesforce Connect to display the financial transactions as an external object.
- B. Use Salesforce Connect to display the financial transactions as an external object.
- **C. Use Salesforce External Service to display financial transactions in a community lightning page.**
- D. Use Iframe to display core banking financial transactions data in the customer community.

Answer: C

NEW QUESTION # 39

Northern Trail Outfitters (NTO) use Salesforce to track leads, opportunities, and to capture order details. However, Salesforce isn't the system that holds or processes orders. After the order details are captured in Salesforce, an order must be created in the remote system, which manages the orders lifecycle. The Integration Architect for the project is recommending a remote system that will subscribe to the platform event defined in Salesforce.

Which integration pattern should be used for this business use case?

- **A. Fire and Forget**
- B. Batch Data Synchronization
- C. Request and Reply
- D. Remote Call In

Answer: A
