

Interactive SAP C_TS470_2412 Testing Engine - New C_TS470_2412 Test Syllabus

Complete Guide to Preparing for the SAP C_TS470_2412 Exam

SAP C_TS470_2412 Exam Guide

www.ERPPrep.com
Prepare for the SAP C_TS470_2412 certification exam with this comprehensive guide. Gain in-depth knowledge of key topics, exam format, and best practices to enhance your understanding. Access expert strategies, sample questions, and study resources to boost your confidence and ensure success in the SAP S/4HANA Cloud Private Edition, Service certification exam.

What's more, part of that Exams-boost C_TS470_2412 dumps now are free: <https://drive.google.com/open?id=1BioPcz7JVVEwdnidxJWDnOLcjGDPXabu>

To be well-prepared, you require trustworthy and reliable Exams-boost practice material. You also require accurate Exams-boost study material to polish your capabilities and improve your chances of passing the C_TS470_2412 Certification Exam. Exams-boost facilitates your study with updated SAP C_TS470_2412 exam dumps.

SAP C_TS470_2412 Exam Syllabus Topics:

Topic	Details
Topic 1	• Service Order Management: This section of the exam measures the skills of SAP Service Operations Consultants and covers the end-to-end management of service orders within SAP. It includes the creation, processing, tracking, and fulfillment of service requests, ensuring seamless coordination between departments. Proper service order management enables organizations to enhance customer satisfaction, streamline operations, and improve response times through integrated workflows.
Topic 2	• Organizational Data: This section of the exam measures the skills of Enterprise Data Managers and covers the structuring and management of organizational data within SAP systems. It focuses on defining key organizational elements, configuring data hierarchies, and ensuring proper integration across business units. Mastery of this domain is essential for maintaining accurate reporting structures, workflow efficiency, and compliance with enterprise-wide data governance policies.

Topic 3	Managing Clean Core: This section of the exam measures the skills of SAP Solution Architects and covers the principles of maintaining a clean core within SAP systems. It focuses on strategies for minimizing customizations, leveraging standard SAP functionalities, and ensuring system integrity while allowing for necessary extensions. The goal is to enhance system performance, ease upgrades, and maintain long-term sustainability.
Topic 4	Service Master Data: This section of the exam measures the skills of SAP Master Data Specialists and covers the management and configuration of service-related master data within SAP environments. It includes defining service objects, managing attributes, and ensuring accurate data flow across modules. Effective service master data management helps improve service delivery, optimize resource utilization, and maintain consistency across business processes.

New SAP C_TS470_2412 Test Syllabus & C_TS470_2412 Practice Test Pdf

Most users are confident in our SAP C_TS470_2412 Test Questions Pdf, they write and master our questions carefully, so they can always clear exam successfully. If you have any doubt and suggestion about our C_TS470_2412 test questions pdf, we are happy that you reply to us. If you fail exam because of our invalid products, once we confirm we will full refund all cost of dumps to you without any condition. Your money will be guaranteed for every user.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition Service Sample Questions (Q52-Q57):

NEW QUESTION # 52

Which feature is unique for solution quotations in SAP standard delivery?

- **A. Using product bundles**
- B. Determining service contracts
- C. Using configurable products
- D. Using product proposals

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

In SAP S/4HANA Cloud Private Edition, Service, the solution quotation is a specialized transaction type (e.g., SRVP in standard delivery) designed to offer customers a combination of products and services as a bundled solution. This capability is distinct from other quotation types, such as standard service quotations (e.g., scope item 4GA), and is part of the solution order management process introduced in SAP S/4HANA to support complex sales scenarios. Let's analyze each option to identify the unique feature in the standard delivery:

* Using product proposals (A): Product proposals are a feature in SAP S/4HANA Service that suggest items (e.g., spare parts or services) during order or quotation creation, based on predefined rules or bills of material (BOMs) with usage S (Service). While available in service quotations and orders, this feature is not unique to solution quotations; it's a broader functionality across service transactions and not specific to the solution quotation's purpose.

* Using configurable products (B): Configurable products, supported via Advanced Variant Configuration (scope item 6GS), allow customization of products with variants in service quotations and orders. This feature enhances flexibility in pricing and product specification but is not exclusive to solution quotations. It's available in standard service quotations and sales orders as well, making it a shared capability rather than a unique feature.

* Using product bundles (C): This is the defining feature of solution quotations in SAP S/4HANA standard delivery. Solution quotations enable the creation of quotations for product bundles, which are predefined combinations of different product types (e.g., tangible goods, services, and contract-relevant items) modeled in the master data. When a bundle is entered in a solution quotation, it automatically explodes into individual items, triggering follow-up transactions like sales orders, service orders, or service contracts upon acceptance. This bundling capability, introduced in release 1809 and enhanced in subsequent releases (e.g., 1909), is unique to solution quotations and distinguishes them from other quotation types, which do not natively support this integrated bundle explosion and multi-transaction generation.

* Determining service contracts (D): Determining applicable service contracts (e.g., checking contract coverage for a technical

object) is a feature in service processes, such as in-house repair (scope item 3XK) or service order management (scope item 3D2). While solution quotations can include contract- relevant items and create service contracts as follow-ups, this determination is not unique to them; it's a common functionality across service quotations and orders when linked to contract management (scope item 3MO).

The uniqueness of product bundles in solution quotations lies in their ability to streamline the sale of complex solutions by integrating diverse product types into a single quotation, with automated follow-up document creation (e.g., sales orders for goods, service orders for services, and contracts for subscriptions). This is explicitly supported in the standard delivery via Customizing (e.g., transaction type SRVP) and master data setup for bundles, as detailed in SAP's solution order management documentation.

Extract from SAP Documentation: "Solution quotations enable you to offer solutions to your customers by creating quotations for combinations of different types of products modeled as product bundles in your master data, a feature unique to this process in SAP S/4HANA." (SAP Community Blog, Solution Quotation in SAP S/4HANA Service 1909OP, 2019).

NEW QUESTION # 53

What can you use to speed up the creation of new service contracts by reusing existing information?

- A. Product bundles
- B. Service order templates
- C. Service contract templates
- D. Service contract quotations

Answer: C

Explanation:

Creating service contracts in SAP S/4HANA Cloud Private Edition, Service can be time-consuming if done from scratch. To streamline this process, SAP provides tools to reuse existing data. The correct answer is service contract templates (Option D). A service contract template is a predefined structure that includes standard data such as items, pricing conditions, billing plans, and service objects. When creating a new service contract, you can select a template and adapt it to the specific customer or scenario, significantly reducing manual entry and ensuring consistency.

* Service contract quotations (A): These are preliminary documents used to propose a contract to a customer, but they are not designed for reuse as templates for contract creation.

* Service order templates (B): These are used to standardize service orders, not service contracts, and thus do not apply here.

* Product bundles (C): These group products or services together but are not templates for creating contracts; they are more relevant to sales or service items.

"Service contract templates enable the rapid creation of new contracts by providing reusable structures with predefined data, such as items and conditions, which can be adjusted as needed."

NEW QUESTION # 54

Which item categories can you use in service orders? Note: There are 3 correct answers to this question.

- A. Expense items
- B. Solution items
- C. Service items
- D. Delivery items
- E. Sales items

Answer: A,C,E

Explanation:

In SAP S/4HANA Cloud Private Edition, Service, service orders support various item categories to represent different types of activities or materials. The correct answers are:

* Service items (A): Used for billable services performed (e.g., repair or maintenance tasks).

* Sales items (C): Used for selling products or spare parts within the service order.

* Expense items (E): Used to record costs (e.g., travel or external services) that may or may not be billable.

* Solution items (B): This is not a standard item category in service orders; it relates more to solution quotations or configurable products.

* Delivery items (D): These are specific to sales processes (e.g., outbound deliveries), not service orders.

"Service orders support item categories such as service items for service activities, sales items for material sales, and expense items for cost recording."

NEW QUESTION # 55

What are some customizing settings you need to maintain so that a repair confirmation (transaction type REPC) can be billed to a customer? Note: There are 3 correct answers to this question.

- A. You make sure each item category used in the repair confirmation corresponds to an item category from Sales that is assigned to the billing type.
- B. You map the service item categories used in the repair confirmation to sales item categories for the billing document request.
- C. You maintain what billing type needs to be used for a repair confirmation.
- D. You assign a billing plan type to the sales document type used for the billing document request.
- E. You assign a sales document type to transaction type REPC for the billing document request.

Answer: A,B,E

Explanation:

To bill a repair confirmation (REPC) in SAP S/4HANA Service:

- * You make sure each item category used in the repair confirmation corresponds to an item category from Sales that is assigned to the billing type: Item categories (e.g., REPI) must map to sales item categories (e.g., TAN) with billing relevance.
- * You assign a sales document type to transaction type REPC for the billing document request: A sales document type (e.g., F2 for invoice) is linked to REPC in Customizing to generate billing requests.
- * You map the service item categories used in the repair confirmation to sales item categories for the billing document request: This ensures seamless transition from service to sales processes.
- * Billing plan type: Optional and not mandatory for basic billing.
- * Maintain billing type: Defined globally, not specific to REPC. This is part of in-house repair billing setup. "Map service item categories to sales item categories and assign a sales document type to REPC for billing." (SAP Help Portal, Repair Confirmation Billing).

NEW QUESTION # 56

Which assignment is required in a cross-plant planning scenario?

- A. Several planning plants to a maintenance plant
- B. A planner group to several maintenance plants
- C. Several maintenance plants to a planning plant
- D. A planner group to several planning plants

Answer: C

Explanation:

In across-plant planning scenario, maintenance activities span multiple plants. The correct answer is B. Let's unpack this.

Cross-Plant Planning Context:

One planning plant oversees maintenance for multiple maintenance plants (where technical objects reside).

Why Several Maintenance Plants to a Planning Plant?

The planning plant is the central hub for scheduling and resource allocation. Maintenance plants (e.g., Plant 0001, Plant 0002) are assigned to it (e.g., Plant 1000) in customizing (SPRO # Enterprise Structure # Assignment # Plant Maintenance). This ensures a single point of control for work orders and plans across plants.

Why Not the Others?

- * A: Planner groups are assigned within a plant, not across plants directly.
- * C: Multiple planning plants for one maintenance plant is illogical.
- * D: Planner groups operate within a planning plant, not across multiple.

Example:

Planning Plant 1000 manages maintenance for Plants 0001 and 0002.

"In cross-plant planning, several maintenance plants are assigned to a planning plant to centralize maintenance scheduling."

NEW QUESTION # 57

.....

We are all ordinary human beings. Something what have learned not completely absorbed, so that wo often forget. When we need

to use the knowledge we must learn again. When you see Exams-boost's SAP C_TS470_2412 Exam Training materials, you understand that this is you have to be purchased. It allows you to pass the exam effortlessly. You should believe Exams-boost will let you see your better future. Bright hard the hard as long as Exams-boost still, always find hope. No matter how bitter and more difficult, with Exams-boost you will still find the hope of light.
