## ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q36-Q41):

### NEW QUESTION # 36

What is the purpose of ISO/IEC 15408 (Common Criteria)?

Available Choices (select all choices that are correct)

- A. To describe what constitutes a secure product
- B. To define a product development evaluation methodology
- C. To describe a process for risk management

- D. To define a security management organization

**Answer: B**

**NEW QUESTION # 37**

Which of the following tools has the potential for serious disruption of a control network and should not be used on a live system?  
Available Choices (select all choices that are correct)

- A. Web browser
- **B. Vulnerability scanner**
- C. Remote desktop
- D. FTP

**Answer: B**

Explanation:

A vulnerability scanner is a tool that scans a network or a system for known vulnerabilities, such as misconfigurations, outdated software, or weak passwords. A vulnerability scanner can provide valuable information for improving the security posture of a system, but it can also cause serious disruption of a control network if used on a live system. This is because a vulnerability scanner may generate a large amount of network traffic, consume system resources, trigger alarms, or even crash devices by exploiting vulnerabilities. Therefore, a vulnerability scanner should not be used on a live system without proper authorization and precautions. A vulnerability scanner should only be used on a test or isolated network, or during a scheduled maintenance window with minimal impact on the system operation. **NEW QUESTION # 38**

After receiving an approved patch from the JACS vendor, what is BEST practice for the asset owner to follow?  
Available Choices (select all choices that are correct)

- A. If no problems are experienced with the current IACS, it is not necessary to apply the patch.
- B. If a low priority, there is no need to apply the patch.
- **C. If a medium priority, schedule the installation within three months after receipt.**
- D. If a high priority, apply the patch at the first unscheduled outage.

**Answer: C**

**NEW QUESTION # 39**

How should CSMS organizational responsibilities or training be handled over time?

- A. They should remain constant.
- **B. They should be evaluated.**
- C. They should be ignored.
- D. They should be expanded indefinitely.

**Answer: B**

Explanation:

ISA/IEC 62443-2-1 emphasizes the importance of the ongoing evaluation of organizational responsibilities and training as part of continuous improvement within the CSMS. Periodic assessment ensures that personnel remain aware of their roles, are adequately trained, and that the program adapts to changes in the environment, technology, or threat landscape. The standard discourages keeping responsibilities static or expanding without control; instead, it advocates for regular reviews and updates.

Reference: ISA/IEC 62443-2-1:2009, Section 5.4.3 ("Training and awareness") and 6.2.4 ("Periodic review and evaluation").
