Get ISQI CTFL-AT Exam Questions To Achieve High Score

Maybe there are so many candidates think the CTFL-AT exam is difficult to pass that they be beaten by it. But now, you don't worry about that anymore, because we will provide you an excellent exam material. Our CTFL-AT exam materials are very useful for you and can help you score a high mark in the test. It also boosts the function of timing and the function to simulate the CTFL-AT Exam so you can improve your speed to answer and get full preparation for the test. Trust us that our CTFL-AT exam torrent can help you pass the exam and find an ideal job.

ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q49-Q54):

NEW QUESTION # 49

A calculator application is being developed. The third sprint has been planned to add functionality to the calculator to allow scientific calculations.

Which TWO examples below represent activities that would likely be managed on an agile task board for the third sprint?

- 1) A task to design the features planned for the next sprint.
- 2) A task to run an acceptance test for a user story.
- 3) A task to automate regression tests.
- 4) A task to participate in training in preparation for the fourth sprint.
- 5) A task to produce a daily progress report for the agile team members.

- A. 1, 5
- B. 2, 3
- C. 4, 5

- D. 1, 4

Answer: B

Explanation:

Explanation

According to the ISTQB Tester Foundation Level Agile Tester syllabus, an agile task board is a visual tool that displays the status of the work items in an agile sprint. The task board typically shows the user stories, tasks, and their progress from "to do" to "done".

The task board helps the agile team to monitor and coordinate their work, and to communicate with stakeholders. Therefore, the examples that represent activities that would likely be managed on an agile task board for the third sprint are those that are related to the user stories, tasks, and their progress in the current sprint. Option A is the correct answer, as it contains two examples of such activities: running an acceptance test for a user story, and automating regression tests. These are both tasks that are part of the testing process in the current sprint, and their status can be tracked on the task board. Option B is not a correct answer, as it contains two examples of activities that are not related to the current sprint:

designing the features planned for the next sprint, and participating in training in preparation for the fourth sprint. These are both activities that are part of the planning or learning process for the future sprints, and they are not managed on the task board. Option C is also not a correct answer, as it contains two examples of activities that are not related to the current sprint: participating in training in preparation for the fourth sprint, and producing a daily progress report for the agile team members. These are both activities that are part of the learning or reporting process, and they are not managed on the task board. Option D is also not a correct answer, as it contains two examples of activities that are not related to the current sprint: designing the features planned for the next sprint, and producing a daily progress report for the agile team members. These are both activities that are part of the planning or reporting process, and they are not managed on the task board. NEW QUESTION # 51

Which of the following activities would you expect most likely to be performed during daily stand-up meetings?

- A. Highlighting blocking issues that are impeding the test progress
- B. Creating acceptance tests for the user stories selected for the current iteration
- C. Discussing what did not work well during the previous iteration
- D. Identifying specific quality risks associated with the next iteration

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

From CTFL-AT Syllabus v4.0, Section 5.2 Daily Stand-Ups, it states:

"The daily stand-up is a short meeting used to discuss progress, plans for the day, and any impediments that are blocking progress." Therefore, Option B is correct - highlighting impediments/blockers is a key goal of the daily stand-up.

* Option A is a retrospective activity.

* Option C is done during planning or risk assessment, not the daily meeting.

* Option D is part of iteration planning, not the stand-up.

Learning Objective (K1) - Recall daily stand-up purpose and format

NEW QUESTION # 52

During a retrospective, which of the following items would be the LEAST effective to generate discussions on process improvement?

- A. The automation tests failed frequently without any logs to help in debugging the failure reason.
- B. The build process was slow and this often caused delays waiting for the build to complete.
- C. One of the testers was regarded as being both disruptive and lazy and did not contribute to team success.
- D. For the last sprint the estimated and actual effort were much higher than the team capacity.

Answer: C

Explanation:

Explanation

According to the ISTQB Tester Foundation Level Agile Tester syllabus, a retrospective is a meeting held at the end of each iteration or release, where the agile team reflects on what went well and what can be improved in their processes, practices, and interactions. The purpose of a retrospective is to identify and implement actions for continuous improvement, and to foster a culture of learning and collaboration. Therefore, the items that would be the most effective to generate discussions on process improvement are those that are related to the team's performance, challenges, feedback, and suggestions. Option D is the least effective item to generate discussions on process improvement, as it is a personal attack on one of the team members, and it does not offer any constructive feedback or solution. This kind of item can create a negative and hostile atmosphere in the retrospective, and damage the trust and respect among the team members. Option A is an effective item to generate discussions on process improvement, as it identifies a problem with the build process that affects the team's efficiency and quality, and it can lead to finding ways to optimize the build process or to mitigate the delays. Option B is also an effective item to generate discussions on process improvement, as it reveals a discrepancy between the team's estimation and actual effort, and it can lead to analyzing the root causes of the deviation and to improving the estimation techniques or the team's capacity. Option C is also an effective item to generate discussions on process improvement, as it highlights a weakness in the automation tests that hinders the team's ability to debug and fix the failures, and it can lead to enhancing the automation tests with better logging mechanisms or to reviewing the automation strategy. NEW QUESTION # 53

Why is regression of software a high risk in agile projects?

- A. Test automation can cause regression of software in the test environment.
- B. Regression is built into software as a safeguard against unexpected failures.
- **C. There is code churn due to change in business needs over several sprints.**
- D. Test-driven development means that existing functionality is not considered.

Answer: C

NEW QUESTION # 54

.....

Now many IT professionals agree that ISQI certification CTFL-AT exam certificate is a stepping stone to the peak of the IT industry. ISQI Certification CTFL-AT Exam is an exam concerned by lots of IT professionals.
