ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q14-Q19):

NEW QUESTION # 14
Which of the following is NOT a typical task performed by the tester within an Agile team?

- A. Suggesting improvements in team retrospectives.
- B. Working with business stakeholders to clarify requirements.
- C. Ensuring the appropriate testing tasks are scheduled during iteration planning.
- D. Ensuring all project status meetings are held according to the plan.

Answer: D

Explanation:
Explanation
The tester within an Agile team is not responsible for ensuring all project status meetings are held according to the plan. This is typically a task for the Scrum Master, who facilitates the meetings and ensures that the team follows the Agile principles and practices. The tester within an Agile team is responsible for ensuring the appropriate testing tasks are scheduled during iteration planning, suggesting improvements in team retrospectives, and working with business stakeholders to clarify requirements. These are all tasks that contribute to the quality of the software and the testing process, as well as the collaboration and communication within the team and with the customers. NEW QUESTION # 15

Consider an Agile team using a development practice with these steps:
* Write a failing test for a small piece of code
* Make the test pass by implementing minimal code
* Refactor the code
* Repeat the process with additional small functionality
Which one of the following testing quadrants would the tests produced with this practice be part of?

- A. Q1 - Technology-facing tests that support the team
- B. Q3 - Business-facing tests that critique the product
- C. Q4 - Technology-facing tests that critique the product
- D. Q2 - Business-facing tests that support the team

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
From CTFL-AT Syllabus v4.0, Section 3.2 Test-Driven Development, and Section 3.4 Testing Quadrants:
"TDD focuses on writing unit tests before code is implemented. These are technology-facing tests that support the team and are categorized under Q1." Therefore, Option D is correct.
* Option A involves performance/security testing.
* Option B and C involve business-facing tests, not applicable to TDD.

NEW QUESTION # 16

What is the main benefit of the Test Pyramid?

- A. It means testing is involved early in the development cycle.
- B. It acts as a metric for testing progress.
- C. It shows complexity of testing activities.
- D. It helps in evaluating the amount of test cases needed.

Answer: D

Explanation:
Explanation
The Test Pyramid is a model for organizing tests in a way to make the process of testing faster, efficient and cost-effective. This model focusses on getting maximum functional testing getting covered by faster and less brittle tests like Unit and API tests1. The main benefit of the Test Pyramid is that it helps in evaluating the amount of test cases needed for each level of testing. The Test Pyramid suggests that the number of test cases should decrease as we move up the pyramid, from unit tests to integration tests to end-to-end tests. This is because unit tests are more granular, isolated, and easy to write and maintain, while end-to-end tests are more complex, dependent, and brittle. The Test Pyramid also helps in balancing the test coverage and the test execution time, as unit tests provide high coverage and low execution time, while end-to-end tests provide low coverage and high execution time. By following the Test Pyramid, teams can optimize their testing efforts and resources, and ensure that they have a sufficient and effective test suite for their software. References:

NEW QUESTION # 17
Consider an online application that allows registered users to pay the annual car tax based on the vehicle's engine power in kW.
Given the following user story:
"As a customer I need the online application to calculate the annual car tax amount that I need to pay for my car:
* If the power of the vehicle is less than 20 kW, then the annual car tax is free
* If the power of the vehicle is more or equal than 20 kW but less or equal than 150 kW, then the annual car tax is 250 Euros
* If the power of the vehicle is more than 150 kW, then the annual car tax is 750 Euros" What is the MOST suitable use of a black-box test design technique for this user story?

- A. Decision table testing. Test the following conditions:
  Conditions=registered user logged in; inserted power of the vehicle=20kW; Action=Car tax paid
- B. Use case testing
  Test the following use case (Actor=registered user):
  Pre-condition=registered user logged in
  Scenario=registered user inserts the power of the vehicle, making payment and logs out Post-condition=car tax paid and registered user logged out
- C. State transition testing. Test the transitions between the following states:
  logging in, inserting the power of the vehicle, making payment, logging out.
- D. Equivalence partitioning. Test the annual car tax value for the following partitions:
  [power of the vehicle<20 kW ; 20 kW power of the vehicles150 kW; power of the vehicle>150 kW]

Answer: D
