ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q194-Q199):

NEW QUESTION # 194
You are a Test Manager on a new project. The software that is being created will be used to control the projectors in movie theaters. This is a time critical project because the software must be released before the Christmas holiday season which has the highest movie attendance of the year.
You have decided to implement a review process for the work products that are a part of this release to save both time and money. In order to expedite the training, you brought in a consultant to train the participants and moderators in proper review processes. Your team is enthusiastic about participating in the reviews.
The project is in the early planning stages. As the review leader, what is an appropriate activity for you to be doing at this point in the project? [3]

- A. Calculating the ROI for the review process
- B. Setting a minimum number of defects to be identified in each review
- C. Gathering metrics to determine the success of the review process
- D. Selecting the review items and the appropriate review type

Answer: D

NEW QUESTION # 195
Which of the following statements is true regarding documentation standards?

- A. Documentation standards can vary depending on the test level.
- B. Documentation standards are a lower priority than testing standards.
- C. Documentation standards are determined by the Project Manager.
- D. Agile projects consistently use level test plans and documentation standards.

Answer: A

Explanation:
Documentation standards are not uniform across all test levels; they can differ based on the specific requirements of each level. For instance, unit testing may have different documentation needs compared to system testing. The ISTQB documentation standards recognize this variability and allow for flexibility to suit the context of the test level. This ensures that the documentation is appropriate for the objectives and constraints of each test level, providing clarity and efficiency in the testing process.
References: The ISTQB Advanced Level Test Manager syllabus and the ISTQB Glossary provide detailed information on documentation standards and their application across different test levels. These resources are essential for understanding the principles and practices of effective test documentation in various testing scenarios.

NEW QUESTION # 197

While mining the defect database for patterns of problems in the last release, a Test Manager notices that many of the most damaging failures were caused by defects injected during the low-level design phase.
Which of the following actions will likely give this project the most effective solution to this problem? [3]

- A. Increased white-box coverage during system testing
- B. Formal inspections of the code modules affected by the last release
- C. Increased static analysis during the implementation phase
- D. Mandatory reviews of all important design work products

Answer: D

Explanation:
The most effective solution to this problem is to implement mandatory reviews of all important design work products. This is because reviews are a type of static testing technique that can detect and prevent defects early in the software development lifecycle, before they become more costly and difficult to fix. By reviewing the low-level design work products, such as detailed design specifications, the project team can ensure that they are consistent, complete, and correct, and that they meet the requirements and the quality standards.
