Excellent ISTQB-CTFL Valid Braindumps Pdf | 100% Free Latest ISTQB-

CTFL Exam Bootcamp

Just the same as the free demos of our ISTQB-CTFL learning quiz, we have provided three kinds of versions of our ISTQB-CTFL preparation exam, among which the PDF version is the most popular one. It is understandable that many people give their priority to use paper-based materials rather than learning on computers, and it is quite clear that the PDF version is convenient for our customers to read and print the contents in our ISTQB-CTFL Study Guide.

ISTQB-Foundation Level Exam Sample Questions (Q50-Q55):

NEW QUESTION # 50
Which of the following is an example of black-box dynamic testing?

- A. Coverage analysis
- B. Code inspection
- C. Functional Testing
- D. Checking memory leaks for a program by executing it

Answer: C

Explanation:
Functional testing is an example of black-box dynamic testing. Black-box testing (also known as specification-based testing) is a type of testing that does not consider the internal structure or implementation of the system under test, but rather its external behavior or functionality. Dynamic testing is a type of testing that involves executing the system under test with various inputs and observing its outputs. Functional testing is a type of black-box dynamic testing that verifies that the system under test performs its intended functions according to its requirements or specifications. Functional testing can be performed at various levels and scopes depending on the objectives and criteria of testing. The other options are not examples of black-box dynamic testing. Code inspection is an example of white-box static testing. White-box testing (also known as structure-based testing) is a type of testing that considers the internal structure or implementation of the system under test. Static testing is a type of testing that does not involve executing the system under test, but rather analyzing it for defects, errors, or violations of standards. Code inspection is a type of white-box static testing that involves examining the source code of the system under test for quality, readability, maintainability, etc.
Checking memory leaks for a program by executing it is an example of white-box dynamic testing. Memory leaks are defects that occur when a program fails to release memory that it has allocated but no longer needs.
Checking memory leaks for a program by executing it requires knowledge and access to the internal structure or implementation of the program, such as memory allocation and deallocation mechanisms, pointers, references, etc. Coverage analysis is an example of white-box static testing. Coverage analysis is a technique that measures how much of the code or structure of the system under test has been exercised by a test suite.
Coverage analysis requires knowledge and access to the internal structure or implementation of the system under test, such as statements, branches, paths, conditions, etc. Verified References: A Study Guide to the ISTQB Foundation Level 2018 Syllabus - Springer, page 7.

NEW QUESTION # 51
Which of the following is an example of black-box dynamic testing?

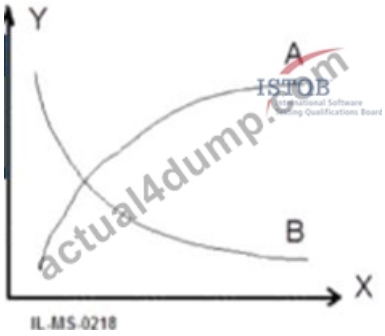
- A. Coverage analysis
- B. Code inspection
- C. Functional Testing
- D. Checking memory leaks for a program by executing it

Answer: C

Explanation:
Functional testing is an example of black-box dynamic testing. Black-box testing (also known as specification-based testing) is a type of testing that does not consider the internal structure or implementation of the system under test, but rather its external behavior or functionality. Dynamic testing is a type of testing that involves executing the system under test with various inputs and observing its outputs. Functional testing is a type of black-box dynamic testing that verifies that the system under test performs its intended functions according to its requirements or specifications. Functional testing can be performed at various levels and scopes depending on the objectives and criteria of testing. The other options are not examples of black-box dynamic testing. Code inspection is an example of white-box static testing. White-box testing (also known as structure-based testing) is a type of testing that considers the internal structure or implementation of the system under test. Static testing is a type of testing that does not involve executing the system under test, but rather analyzing it for defects, errors, or violations of standards. Code inspection is a type of white-box static

testing that involves examining the source code of the system under test for quality, readability, maintainability, etc. Checking memory leaks for a program by executing it is an example of white-box dynamic testing. Memory leaks are defects that occur when a program fails to release memory that it has allocated but no longer needs. Checking memory leaks for a program by executing it requires knowledge and access to the internal structure or implementation of the program, such as memory allocation and deallocation mechanisms, pointers, references, etc. Coverage analysis is an example of white-box static testing. Coverage analysis is a technique that measures how much of the code or structure of the system under test has been exercised by a test suite. Coverage analysis requires knowledge and access to the internal structure or implementation of the system under test, such as statements, branches, paths, conditions, etc. Verified References: A Study Guide to the ISTQB Foundation Level 2018 Syllabus - Springer, page 7.

NEW QUESTION # 52
The following chart represents metrics related to testing of a project that was competed. Indicate what is represented by tie lines A, B and the axes X.Y



- A. X - Time
  Y - Percent
  A - % of functional tests in the test suite
  B - % of non-functional tests in the test suite
- B. X - Time
  Y - Number of defects
  A - Number of open defects
  B - Number of closed defects
- C. X - Time
  Y - Cost
  A - Cost of test (per week)
  B - Cost of finding a single bug (per week)
- D. X - Time
  Y - Count
  A - Total number of executed tests
  B - Number of open bugs

Answer: D

Explanation:
Option D correctly explains what is represented by the lines A, B and the axes X, Y in a testing metrics chart.
According to option D:
* X-axis represents Time
* Y-axis represents Count
* Line A represents Number of open bugs
* Line B represents Total number of executed tests

This information is essential in understanding and analyzing the testing metrics of a completed project.

NEW QUESTION # 53
Which of the following BEST matches the descriptions with the different categories of test techniques?
1.Test cases are based on the test basis which may include the requirements, use cases and user stories
2.Test cases are based on the test basis which may include the software architecture or code
3.Test cases can show deviations from the requirements
4.These test techniques are applicable to both functional and non-functional testing
5.Tests are based on knowledge of developers, users and other stakeholders Black - Black-box test techniques White * White-box test techniques Experience - Experience-based test techniques

- A. Black - 2, 3 White -1 Experience - 4, 5
- B. Black -1,3.4 White - 2 Experience - 5
- C. Black - 2, 3 White -1,5 Experience - 4
- D. Black -1,2 White - 3, 4 Experience - 5

Answer: B

Explanation:
Matching the descriptions with the test techniques:
* Black-box test techniques use the external description of the software, including requirements, use cases, and user stories.
* White-box test techniques use the internal structure of the software system, including software architecture and code.
* Black-box test techniques can reveal deviations from the requirements as they validate the external behavior of the software.
* Both black-box and white-box test techniques are applicable to functional and non-functional testing.

NEW QUESTION # 54
Which ONE of the following roles is responsible for mediating, managing time, and generating a safe review environment in which everyone can speak freely?

- A. Review leader
- B. Reviewer
- C. Moderator
- D. Manager

Answer: C

Explanation:
Comprehensive and Detailed In-Depth Explanation:
The Moderator (D) plays a key role in formal reviews by facilitating discussions, ensuring that reviews stay on track, and creating an open environment for feedback. The Manager (A) is responsible for overseeing the testing process but does not directly facilitate reviews. The Reviewer (B) is responsible for examining the work product, while the Review Leader (C) organizes reviews but does not necessarily mediate them.
