

ITIL-4-Practitioner-Deployment-Management Aktuelle Prüfung - ITIL-4-Practitioner-Deployment-Management Prüfungsguide & ITIL-4-Practitioner-Deployment-Management Praxisprüfung

Übrigens, Sie können die vollständige Version der DeutschPrüfung ITIL-4-Practitioner-Deployment-Management Prüfungsfragen aus dem Cloud-Speicher herunterladen: https://drive.google.com/open?id=11FtVpoFhUdrd1sKRULC2TZ3o1YC_eRk3

ITIL-4-Practitioner-Deployment-Management ist eine Peoplecert Zertifizierungsprüfung. So ist ITIL-4-Practitioner-Deployment-Management Zertifizierung der erste Schritt zur Peoplecert Zertifizierung. Deswegen ist die ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung kürzlich immer beliebter geworden. Immer mehr Leute haben sich an der Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung beteiligt. Aber die Erfolgsquote in der Prüfung ist nicht so hoch. Wählen Sie auch einschlägige Prüfungskurse, wenn Sie ITIL-4-Practitioner-Deployment-Management Prüfung ablegen möchten?

Haben Sie die Schulungsunterlagen zur Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung aus unserem DeutschPrüfung, werden Sie den Schlüssel für das Bestehen der Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung gewinnen, der Ihnen bessere Entwicklung im IT-Bereich gewährleisten kann. Das Alles bedürft Ihres Vertrauens: Sie müssen auf DeutschPrüfung vertrauen und Sie müssen zudem auf die Schulungsunterlagen zur Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung vertrauen. Inhalt unserer Lehrmaterialien ist absolut echt und zuverlässig. Darüber hinaus beträgt unsere Bestehensrate der Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung 100%.

>> ITIL-4-Practitioner-Deployment-Management Quizfragen Und Antworten <<

ITIL-4-Practitioner-Deployment-Management Zertifizierungsfragen, Peoplecert ITIL-4-Practitioner-Deployment-Management PrüfungFragen

Wenn Sie einige unserer Prüfungsfrage und Antworten für Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung versucht haben, dann können Sie eine Wahl darüber treffen, DeutschPrüfung zu kaufen oder nicht. Wir werden Ihnen mit 100% Bequemlichkeit und Garantie bieten. Denken Sie bitte daran, dass nur DeutschPrüfung Ihnen zum Bestehen der

Peoplecert ITIL 4 Practitioner: Deployment Management ITIL-4-Practitioner-Deployment-Management Prüfungsfragen mit Lösungen (Q17-Q22):

17. Frage

[Integrate Deployment Management with Other Practices]

A large organization wants to manage its IT services by analyzing and improving value streams. It is unsure how to combine value streams and management practices, such as change enablement and deployment management. What is the CORRECT approach for this organization to take?

- A. Create a single value stream that includes change enablement, deployment management, and other practices such as continual improvement
- B. Create one combined value stream for change enablement and deployment management
- **C. Create several value streams that include change enablement, deployment management, and other practices such as continual improvement**
- D. Create a separate value stream for each management practice

Antwort: C

Begründung:

ITIL 4 emphasizes that value streams are designed to deliver specific outcomes by integrating relevant management practices tailored to the context of services or products. For a large organization, creating several value streams that incorporate practices like change enablement, deployment management, and continual improvement (Option D) is the most effective approach. This allows flexibility to address different services or workflows while ensuring practices are embedded where needed, aligning with ITIL 4's value-driven and context-specific principles.

Option A (Create a separate value stream for each management practice): Incorrect, as this fragments processes and contradicts ITIL 4's holistic approach, where practices work together within value streams to deliver outcomes, not in isolation.

Option B (Create one combined value stream for change enablement and deployment management): Incorrect, as limiting to a single value stream for only two practices may not account for other necessary practices or varying service needs, reducing flexibility.

Option C (Create a single value stream that includes change enablement, deployment management, and other practices such as continual improvement): Incorrect, as a single value stream for all practices may become overly complex and fail to address diverse service requirements in a large organization.

Option D (Create several value streams that include change enablement, deployment management, and other practices such as continual improvement): Correct, as it reflects ITIL 4's guidance to design multiple value streams tailored to specific services or products, integrating relevant practices to optimize value delivery.

18. Frage

[Apply Deployment Management Processes]

What should be done if a newly developed deployment model cannot be tested for technical reasons?

- A. Automate the activities of the new model before it is used
- B. Only use the new model after a way to test it has been found
- **C. Closely monitor the first few uses of the new model**
- D. Carry out test deployments to see if the model works correctly

Antwort: C

Begründung:

When a newly developed deployment model cannot be tested due to technical limitations, ITIL 4 emphasizes a risk-based approach to deployment management to ensure stability and minimize disruption. Option C, closely monitoring the first few uses of the new model, aligns with ITIL 4's guidance to proceed cautiously when full testing is not feasible. This approach allows the organization to deploy the model in a controlled environment, observe its performance, and quickly address any issues, thereby reducing risk while gathering real-world data.

Option A (Only use the new model after a way to test it has been found): While testing is ideal, delaying deployment indefinitely until a testing method is found may not be practical, especially if business needs require timely deployment. This option is overly restrictive and does not balance risk with operational demands.

Option B (Carry out test deployments to see if the model works correctly): Conducting test deployments assumes testing is possible,

which contradicts the question's premise that testing cannot be done for technical reasons. This makes the option invalid.

Option C (Closely monitor the first few uses of the new model): This is the most pragmatic approach, as it allows deployment with safeguards like monitoring to mitigate risks, aligning with ITIL's focus on value delivery and risk management.

Option D (Automate the activities of the new model before it is used): Automating an untested model could amplify risks, as automation without validation may propagate errors across environments.

19. Frage

[Engage with Stakeholders and Suppliers]

Which is NOT an example of how an organization should work with suppliers to improve its deployment management practice?

- A. Involving third parties in review and planning of the value streams that include deployment management
- B. Carefully selecting suppliers of software tools for CI/CD pipeline
- **C. Developing and enforcing detailed and rigorous procedures for every interaction between suppliers and the organization**
- D. Considering dependencies on third parties when analyzing service value streams which include deployment management

Antwort: C

Begründung:

ITIL 4 encourages collaborative and flexible relationships with suppliers to enhance deployment management, focusing on value co-creation rather than rigid controls. Option D is not aligned with this approach, as overly detailed and rigorous procedures can hinder adaptability and innovation in supplier relationships.

Option A (Considering dependencies on third parties when analyzing service value streams which include deployment management): Correct practice, as understanding supplier dependencies ensures effective integration of deployment activities into value streams.

Option B (Carefully selecting suppliers of software tools for CI/CD pipeline): Correct, as choosing reliable suppliers for CI/CD tools is critical to building a robust deployment management practice.

Option C (Involving third parties in review and planning of the value streams that include deployment management): Correct, as supplier involvement in planning fosters collaboration and ensures alignment with deployment goals.

Option D (Developing and enforcing detailed and rigorous procedures for every interaction between suppliers and the organization): Incorrect, as this approach is overly prescriptive and contradicts ITIL 4's emphasis on flexible, value-focused supplier relationships. It risks stifling collaboration and innovation.

20. Frage

[Understand the Key Concepts of Deployment Management]

Which is a key feature of continuous deployment which is not found in other CI/CD stages?

- A. It predominantly uses staging environments
- **B. It enables users to benefit immediately from changes**
- C. It allows individual decisions about software releases
- D. It automatically tests software code

Antwort: B

Begründung:

Continuous deployment (CD) in ITIL 4 is the most advanced stage of the CI/CD pipeline, where every validated change is automatically deployed to production without manual intervention. The key feature unique to continuous deployment, not found in continuous integration or continuous delivery, is that it enables users to benefit immediately from changes (Option B), as changes reach production instantly after passing automated tests.

Option A (It automatically tests software code): Incorrect, as automated testing is a feature of continuous integration and continuous delivery, not unique to continuous deployment.

Option B (It enables users to benefit immediately from changes): Correct, as continuous deployment automatically pushes validated changes to production, delivering value to users without delay, unlike other CI/CD stages.

Option C (It predominantly uses staging environments): Incorrect, as continuous deployment minimizes reliance on staging environments, deploying directly to production.

Option D (It allows individual decisions about software releases): Incorrect, as continuous deployment eliminates manual release decisions, relying on automation for consistency.

21. Frage

[Measure and Improve Deployment Management]

Which capability criterion should be used to assess if the organization is succeeding in increasing the capability level of its deployment management practice by maintaining an effective deployment approach?

- A. Deployments are supported by relevant competences
- B. Deployments include required technologies and information flows
- C. Deployment rules are integrated with policies and rules for changes and releases
- **D. New and changed services and service components are successfully deployed**

Antwort: D

Begründung:

ITIL 4 defines capability levels based on outcomes and value delivery, with higher levels indicating reliable and effective practices.

To assess whether an organization is increasing its deployment management capability by maintaining an effective approach, the key criterion is whether new and changed services and service components are successfully deployed (Option A). This outcome-focused measure directly indicates the practice's reliability and alignment with organizational goals.

Option A (New and changed services and service components are successfully deployed): Correct, as successful deployments are the primary indicator of an effective deployment management practice, reflecting capability maturity in ITIL 4.

Option B (Deployments are supported by relevant competences): Incorrect, as while competences are important, they are a supporting factor, not the primary criterion for assessing capability outcomes.

Option C (Deployments include required technologies and information flows): Incorrect, as having the right technologies is a prerequisite, not a direct measure of deployment success or capability.

Option D (Deployment rules are integrated with policies and rules for changes and releases): Incorrect, as integration with other practices supports deployment but is not the key indicator of capability compared to actual deployment success.

22. Frage

.....

Die Kandidaten können die Schulungsunterlagen zur Peoplecert ITIL-4-Practitioner-Deployment-Management Zertifizierungsprüfung von DeutschPrüfung in einer Simulationsumgebung lernen. Sie können die Prüfungsorte und die Testzeit kontrollieren. In DeutschPrüfung können Sie sich ohne Druck und Stress gut auf die Peoplecert ITIL-4-Practitioner-Deployment-Management Prüfung vorbereiten. Zugleich können Sie auch einige häufige Fehler vermeiden. So werden Sie mehr Selbstbewusstsein in der Peoplecert ITIL-4-Practitioner-Deployment-Management Prüfung haben. In der realen Prüfung können Sie Ihre Erfahrungen wiederholen, um Erfolg in der Prüfung zu erzielen.
