

# ITIL-4-Practitioner-Deployment-Management Exam

## Valid Test Objectives- Latest Exam ITIL-4-Practitioner-Deployment-Management Pass Guide Pass Success

BONUS!!! Download part of RealExamFree ITIL-4-Practitioner-Deployment-Management dumps for free:  
<https://drive.google.com/open?id=1ZYLhzlRmRRSqeEyAgruz-KYMBMjekjTp>

Our Peoplecert ITIL-4-Practitioner-Deployment-Management demo products hold the demonstration for our actual products, demos are offered at no cost only for raising your confidence level. Procure the quality of our product in advance, unsighted featured becomes reveal with our ITIL-4-Practitioner-Deployment-Management Demo products. Free Private Cloud Monitoring and Operations with demos respond to all kind of worries that customers have in their mind while going for actual purchase.

### Peoplecert ITIL-4-Practitioner-Deployment-Management Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>The ITIL Capability model: This section of the exam measures the skills of a Service Transition Manager and introduces how capability criteria contribute to developing and maturing Deployment Management practices. It focuses on aligning organizational capabilities with ITIL best practices to maintain consistency, quality, and effectiveness in service transitions.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Information and technology: This section of the exam measures the skills of a Service Transition Manager and explores how technology and information systems support deployment activities. It covers how tools and digital platforms can enhance the planning, tracking, and execution of deployment efforts, ultimately contributing to more reliable and streamlined service rollouts.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Practice processes: This section of the exam measures the skills of a Service Transition Manager and delves into the key processes that shape Deployment Management. It outlines how these processes and activities can be aligned with the organization's value stream to ensure that deployments are well-planned, coordinated, and delivered without disrupting existing services.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Roles and competencies: This section of the exam measures the skills of a Change Implementation Lead and focuses on identifying essential roles within Deployment Management and the competencies needed to perform them effectively. It explores how to position deployment responsibilities within an organization and what skill sets are necessary to ensure deployment tasks are carried out successfully.</li></ul>

Topic 5	<ul style="list-style-type: none"> <li>Practice success: This section of the exam measures the skills of a Change Implementation Lead and explains how to achieve success with Deployment Management through the application of ITIL guiding principles. It focuses on strategies that help establish a robust and value-driven deployment approach that aligns with business objectives and delivers measurable outcomes.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Practice success factors: This section of the exam measures the skills of a Change Implementation Lead and focuses on understanding practice success factors and the core metrics used to evaluate deployment effectiveness. It emphasizes the importance of tracking efficiency and success in service deployment and how these metrics help improve the overall stability and agility of the service transition process.</li> </ul>
Topic 7	<ul style="list-style-type: none"> <li>Partners and suppliers: This section of the exam measures the skills of a Change Implementation Lead and examines the influence of partners and suppliers in the deployment process. It highlights the importance of effective collaboration and communication with external stakeholders to ensure that deployments are delivered according to expectations and with minimal risks.</li> </ul>

## **2025 Updated Valid ITIL-4-Practitioner-Deployment-Management Test Objectives Help You Pass ITIL-4-Practitioner-Deployment-Management Easily**

All these three ITIL 4 Practitioner: Deployment Management (ITIL-4-Practitioner-Deployment-Management) exam questions formats offered by the RealExamFree are easy to use and perfectly work with all the latest web browsers, operating systems, and devices. The RealExamFree ITIL-4-Practitioner-Deployment-Management web-based practice test software and desktop practice test software both are the mock Peoplecert ITIL-4-Practitioner-Deployment-Management Exam that will give you real-time ITIL 4 Practitioner: Deployment Management (ITIL-4-Practitioner-Deployment-Management) exam environment for quick preparation.

### **Peoplecert ITIL 4 Practitioner: Deployment Management Sample Questions (Q10-Q15):**

#### **NEW QUESTION # 10**

[Apply Deployment Management Processes]

What key output of the 'deployment model development and improvement' process can be used to trigger implementation of a newly updated deployment model?

- A. Deployment review reports
- B. Lessons learned
- C. Updated knowledge management articles
- D. Change request

**Answer: D**

Explanation:

In ITIL 4, the deployment model development and improvement process involves creating or refining models to enhance deployment effectiveness. Implementing a newly updated deployment model typically requires formal authorization and coordination, which is achieved through a change request (Option B). A change request initiates the process to assess, approve, and execute the model update in a controlled manner, ensuring alignment with organizational governance and other practices like change enablement.

Option A (Lessons learned): Incorrect, as lessons learned are an output for improving future processes, not a trigger for implementing a new model.

Option B (Change request): Correct, as a change request is the formal mechanism to propose and implement a new or updated deployment model, per ITIL 4's integration with change enablement.

Option C (Updated knowledge management articles): Incorrect, as knowledge articles support documentation and training but do not trigger implementation.

Option D (Deployment review reports): Incorrect, as review reports provide insights or feedback, not the authorization needed to implement a model.

## NEW QUESTION # 11

[Integrate Deployment Management with Other Practices]

A large organization wants to manage its IT services by analyzing and improving value streams. It is unsure how to combine value streams and management practices, such as change enablement and deployment management. What is the CORRECT approach for this organization to take?

- A. Create a single value stream that includes change enablement, deployment management, and other practices such as continual improvement
- B. Create several value streams that include change enablement, deployment management, and other practices such as continual improvement
- C. Create one combined value stream for change enablement and deployment management
- D. Create a separate value stream for each management practice

**Answer: B**

Explanation:

ITIL 4 emphasizes that value streams are designed to deliver specific outcomes by integrating relevant management practices tailored to the context of services or products. For a large organization, creating several value streams that incorporate practices like change enablement, deployment management, and continual improvement (Option D) is the most effective approach. This allows flexibility to address different services or workflows while ensuring practices are embedded where needed, aligning with ITIL 4's value-driven and context-specific principles.

Option A (Create a separate value stream for each management practice): Incorrect, as this fragments processes and contradicts ITIL 4's holistic approach, where practices work together within value streams to deliver outcomes, not in isolation.

Option B (Create one combined value stream for change enablement and deployment management): Incorrect, as limiting to a single value stream for only two practices may not account for other necessary practices or varying service needs, reducing flexibility.

Option C (Create a single value stream that includes change enablement, deployment management, and other practices such as continual improvement): Incorrect, as a single value stream for all practices may become overly complex and fail to address diverse service requirements in a large organization.

Option D (Create several value streams that include change enablement, deployment management, and other practices such as continual improvement): Correct, as it reflects ITIL 4's guidance to design multiple value streams tailored to specific services or products, integrating relevant practices to optimize value delivery.

## NEW QUESTION # 12

[Apply Deployment Management Processes]

An organization is deploying new software and new servers to support a service that will be launched soon. Which TWO of these activities should the organization conduct as part of the 'verification of the service components' activity of the 'deployment lifecycle management' process?

Checking that the correct models of server have been supplied

Testing the software for defects

Creating a schedule for installing the new servers

Installing the new software to the newly installed servers

- A. 2 and 3
- B. 3 and 4
- C. 1 and 4
- D. 1 and 2

**Answer: D**

Explanation:

In ITIL 4, the 'verification of service components' activity within the deployment lifecycle management process ensures that delivered components meet specifications before deployment. The correct activities are:

Activity 1 (Checking that the correct models of server have been supplied): Part of verification, as it confirms that the hardware components match requirements.

Activity 2 (Testing the software for defects): Part of verification, as it ensures the software is functional and free of critical issues before deployment.

Activity 3 (Creating a schedule for installing the new servers): Incorrect, as scheduling is a planning activity, not verification.

Activity 4 (Installing the new software to the newly installed servers): Incorrect, as installation is part of the deployment execution, not verification.

## NEW QUESTION # 13

[Use Tools and Techniques for Deployment]

Which automation tools should be used to transport and install configuration items into a test environment?

- A. Environment configuration and management tools
- B. Work planning and prioritization tools
- **C. Deployment tools**
- D. Service configuration management tools

**Answer: C**

Explanation:

In ITIL 4, deployment tools are specifically designed to automate the transportation and installation of configuration items (CIs) into various environments, including test environments. These tools ensure consistency, repeatability, and efficiency in deployment processes, which are critical for managing CIs during testing phases.

Option A (Deployment tools): Correct, as deployment tools (e.g., Jenkins, Ansible, or Terraform for certain use cases) are tailored for automating the movement and installation of CIs, ensuring they are correctly placed in test environments with minimal manual intervention.

Option B (Environment configuration and management tools): While these tools (e.g., Puppet, Chef) manage environment settings, their primary focus is on configuring and maintaining environments, not transporting or installing CIs, making them less relevant here.

Option C (Work planning and prioritization tools): Tools like Jira or Trello focus on task management and prioritization, not on automating CI deployment, so this option is incorrect.

Option D (Service configuration management tools): These tools manage relationships and data about CIs in a configuration management database (CMDB), not the physical transport or installation of CIs, ruling out this option.

## NEW QUESTION # 14

[Measure and Improve Deployment Management]

An organization has an objective to create and use deployment approaches that would fit the needs of the organization and the context. How should the organization assess if this objective is achieved?

- **A. By asking stakeholders about their satisfaction with deployment lead times**
- B. By analyzing the adherence to deployment schedules
- C. By looking at the deployment backlog throughput
- D. By measuring percentage of deployments which did not follow the agreed policies and models

**Answer: A**

Explanation:

ITIL 4 emphasizes stakeholder satisfaction as a key indicator of whether a practice meets organizational needs and context, as it reflects the value delivered to users and the business. Option B, asking stakeholders about their satisfaction with deployment lead times, directly assesses whether deployment approaches are effective and aligned with expectations, making it the best method to evaluate the objective.

Option A (By looking at the deployment backlog throughput): Incorrect, as throughput measures efficiency but does not directly indicate whether the deployment approach fits the organization's needs or context.

Option B (By asking stakeholders about their satisfaction with deployment lead times): Correct, as stakeholder feedback on lead times reflects whether deployments are timely and valuable, aligning with ITIL 4's focus on value co-creation.

Option C (By measuring the percentage of deployments which did not follow the agreed policies and models): Incorrect, as non-compliance indicates process issues but does not directly assess fit with organizational needs or stakeholder satisfaction.

Option D (By analyzing the adherence to deployment schedules): Incorrect, as schedule adherence measures operational performance, not whether the approach meets broader contextual needs.

## NEW QUESTION # 15

.....

We know that you have strong desire for success in your career, now, we recommend you to get the ITIL-4-Practitioner-Deployment-Management exam certification. RealExamFree will help you and provide you with the high quality Peoplecert training material. ITIL-4-Practitioner-Deployment-Management questions are selected and edited from the original questions pool and verified by the professional experts. Besides, the updated of ITIL-4-Practitioner-Deployment-Management Pdf Torrent is checked

every day by our experts and the new information can be added into the ITIL-4-Practitioner-Deployment-Management exam dumps immediately.
