

ITIL-4-Practitioner-Deployment-Management Technical Training - ITIL-4-Practitioner-Deployment-Management Vce File

DOWNLOAD the newest PDFDumps ITIL-4-Practitioner-Deployment-Management PDF dumps from Cloud Storage for free:
https://drive.google.com/open?id=19_041QnCO6mSRs08cngUlliujwmWL1pC

In short, we live in an age full of challenges. So we must continually update our knowledge and ability. If you are an ambitious person, our ITIL-4-Practitioner-Deployment-Management exam questions can be your best helper. There are many kinds of ITIL-4-Practitioner-Deployment-Management study materials in the market. You must have no idea to choose which one. It does not matter. Our ITIL Practitioner Level guide braindumps are the most popular products in the market now. Just buy our ITIL-4-Practitioner-Deployment-Management learning quiz, and you will get all you want.

With ITIL-4-Practitioner-Deployment-Management test answers, you are not like the students who use other materials. As long as the syllabus has changed, they need to repurchase new learning materials. This not only wastes a lot of money, but also wastes a lot of time. Our industry experts are constantly adding new content to ITIL-4-Practitioner-Deployment-Management test dumps based on constantly changing syllabus and industry development breakthroughs. All the language used in ITIL-4-Practitioner-Deployment-Management Study Materials is very simple and easy to understand. With ITIL-4-Practitioner-Deployment-Management test answers, you don't have to worry about that you don't understand the content of professional books. You also don't need to spend expensive tuition to go to tutoring class. ITIL-4-Practitioner-Deployment-Management test dumps can help you solve all the problems in your study.

ITIL-4-Practitioner-Deployment-Management Vce File, Pass ITIL-4-Practitioner-Deployment-Management Guaranteed

To help people pass exam easily, we bring you the latest ITIL-4-Practitioner-Deployment-Management exam prep for the actual test which enable you get high passing score easily in test. Our study materials are the up-to-dated and all ITIL-4-Practitioner-Deployment-Management Test Answers you practiced are tested by our professional experts. Once you have well prepared with our ITIL-4-Practitioner-Deployment-Management dumps collection, you will go through the formal test without any difficulty.

Peoplecert ITIL 4 Practitioner: Deployment Management Sample Questions (Q15-Q20):

NEW QUESTION # 15

[Use Tools and Techniques for Deployment]

An organization manually notifies its development and operations teams about potentially faulty deployments. Which tools should be used to automate this process?

- A. Work planning and prioritization tools
- B. Environment configuration and management tools
- **C. Workflow management and collaboration tools**
- D. Service configuration management tools

Answer: C

Explanation:

Automating notifications about faulty deployments requires tools that facilitate communication and process orchestration between teams. ITIL 4 recommends workflow management and collaboration tools (Option B), such as Slack, Microsoft Teams, or ServiceNow, to automate alerts, streamline communication, and ensure timely responses to deployment issues.

Option A (Service configuration management tools): Incorrect, as these tools manage configuration item data in a CMDB, not notifications or team communication.

Option B (Workflow management and collaboration tools): Correct, as these tools automate notifications and enable seamless collaboration between development and operations teams, addressing the issue directly.

Option C (Work planning and prioritization tools): Incorrect, as tools like Jira focus on task management, not real-time notification automation.

Option D (Environment configuration and management tools): Incorrect, as these tools (e.g., Puppet) manage environment setups, not team notifications.

NEW QUESTION # 16

[Understand the Key Concepts of Deployment Management]

Which is a key feature of continuous deployment which is not found in other CI/CD stages?

- A. It automatically tests software code
- B. It predominantly uses staging environments
- **C. It enables users to benefit immediately from changes**
- D. It allows individual decisions about software releases

Answer: C

Explanation:

Continuous deployment (CD) in ITIL 4 is the most advanced stage of the CI/CD pipeline, where every validated change is automatically deployed to production without manual intervention. The key feature unique to continuous deployment, not found in continuous integration or continuous delivery, is that it enables users to benefit immediately from changes (Option B), as changes reach production instantly after passing automated tests.

Option A (It automatically tests software code): Incorrect, as automated testing is a feature of continuous integration and continuous delivery, not unique to continuous deployment.

Option B (It enables users to benefit immediately from changes): Correct, as continuous deployment automatically pushes validated changes to production, delivering value to users without delay, unlike other CI/CD stages.

Option C (It predominantly uses staging environments): Incorrect, as continuous deployment minimizes reliance on staging environments, deploying directly to production.

Option D (It allows individual decisions about software releases): Incorrect, as continuous deployment eliminates manual release decisions, relying on automation for consistency.

NEW QUESTION # 17

[Engage with Stakeholders and Suppliers]

Which is NOT an example of how an organization should work with suppliers to improve its deployment management practice?

- A. Involving third parties in review and planning of the value streams that include deployment management

- B. Carefully selecting suppliers of software tools for CI/CD pipeline
- **C. Developing and enforcing detailed and rigorous procedures for every interaction between suppliers and the organization**
- D. Considering dependencies on third parties when analyzing service value streams which include deployment management

Answer: C

Explanation:

ITIL 4 encourages collaborative and flexible relationships with suppliers to enhance deployment management, focusing on value co-creation rather than rigid controls. Option D is not aligned with this approach, as overly detailed and rigorous procedures can hinder adaptability and innovation in supplier relationships.

Option A (Considering dependencies on third parties when analyzing service value streams which include deployment management): Correct practice, as understanding supplier dependencies ensures effective integration of deployment activities into value streams.

Option B (Carefully selecting suppliers of software tools for CI/CD pipeline): Correct, as choosing reliable suppliers for CI/CD tools is critical to building a robust deployment management practice.

Option C (Involving third parties in review and planning of the value streams that include deployment management): Correct, as supplier involvement in planning fosters collaboration and ensures alignment with deployment goals.

Option D (Developing and enforcing detailed and rigorous procedures for every interaction between suppliers and the organization): Incorrect, as this approach is overly prescriptive and contradicts ITIL 4's emphasis on flexible, value-focused supplier relationships. It risks stifling collaboration and innovation.

NEW QUESTION # 18

[Measure and Improve Deployment Management]

An organization is aiming to achieve capability level 3 for the deployment management practice. What is an indication of the achievement of capability level 3?

- A. Deployment models are developed and implemented
- B. The deployment management team regularly suggests and implements improvement opportunities
- **C. Employees from other practices understand how deployment activities are integrated into relevant workflows**
- D. The deployment manager is able to report on the effectiveness of the deployment management practice

Answer: C

Explanation:

ITIL 4 defines capability level 3 for a practice as achieving integration across the organization, where the practice is embedded into broader workflows and understood by related practices. For deployment management, an indication of reaching capability level 3 is when employees from other practices understand how deployment activities are integrated into relevant workflows (Option B). This demonstrates cross-functional alignment and maturity, showing that deployment management is not siloed but part of the organization's value streams.

Option A (The deployment management team regularly suggests and implements improvement opportunities): Incorrect, as continual improvement is characteristic of higher capability levels (e.g., level 4), not the defining feature of level 3.

Option B (Employees from other practices understand how deployment activities are integrated into relevant workflows): Correct, as level 3 focuses on integration and collaboration across practices, per ITIL 4's capability framework.

Option C (The deployment manager is able to report on the effectiveness of the deployment management practice): Incorrect, as reporting effectiveness is a general management task, not specific to level 3 maturity.

Option D (Deployment models are developed and implemented): Incorrect, as model development occurs at lower capability levels (e.g., level 1 or 2), not a hallmark of level 3.

NEW QUESTION # 19

[Understand the Key Concepts of Deployment Management]

Which of the following BEST describes the scope of deployment management practice?

- **A. The practice includes deploying network hubs to and removing applications from staging environments**
- B. The practice includes removing configuration documentation but not physical servers from the live environment
- C. The practice includes deploying network hubs but not additional software licenses to the live environment
- D. The practice includes updating service documentation and transferring it to the live environment

Answer: A

Explanation:

ITIL 4's deployment management practice encompasses moving hardware, software, and associated components into or out of environments (e.g., staging, testing, or production) to support service delivery. Option A, which includes deploying network hubs (hardware) and removing applications from staging environments (software), accurately reflects this broad scope across the service lifecycle.

Option A (The practice includes deploying network hubs to and removing applications from staging environments): Correct, as it covers both hardware and software movements across environments, aligning with ITIL 4's definition of deployment management.

Option B (The practice includes updating service documentation and transferring it to the live environment): Incorrect, as updating and transferring documentation is part of knowledge management, not deployment management.

Option C (The practice includes removing configuration documentation but not physical servers from the live environment):

Incorrect, as deployment management includes moving physical servers, and configuration documentation is managed elsewhere.

Option D (The practice includes deploying network hubs but not additional software licenses to the live environment): Incorrect, as software licenses may be part of deployment if required, and the option arbitrarily limits the scope.

NEW QUESTION # 20

.....

Exam candidates are susceptible to the influence of ads, so our experts' know-how is impressive to pass the ITIL-4-Practitioner-Deployment-Management exam instead of making financial reward solely. We hypothesize that you fail the exam after using our ITIL-4-Practitioner-Deployment-Management learning engine we can switch other versions for you or give back full refund. In such a way, our ITIL-4-Practitioner-Deployment-Management Exam Questions can give you more choices to pass more exams and we do put our customers' interest as the first thing to consider.

ITIL-4-Practitioner-Deployment-Management Vce File: <https://www.pdfdumps.com/ITIL-4-Practitioner-Deployment-Management-valid-exam.html>

Preparing the ITIL-4-Practitioner-Deployment-Management exam has shortcut, Many people want to pass the ITIL-4-Practitioner-Deployment-Management actual test at one time with high score, Peoplecert ITIL-4-Practitioner-Deployment-Management Technical Training If you think learning on the computer is in convenient, the online test engine is your best choice, this version has all functions of above-mentioned versions, it can be used on your phone at any time, Peoplecert ITIL-4-Practitioner-Deployment-Management Technical Training A qualified person may be more popular and respected by other people.

After you tap a story tile, you can scroll up and down the screen to read the entire story, Jasmine stood glaring around the room, Preparing the ITIL-4-Practitioner-Deployment-Management Exam has shortcut.

Many people want to pass the ITIL-4-Practitioner-Deployment-Management actual test at one time with high score, If you think learning on the computer is in convenient, the online test engine is your best choice, this version ITIL-4-Practitioner-Deployment-Management has all functions of above-mentioned versions, it can be used on your phone at any time.

Free PDF Quiz 2025 Valid Peoplecert ITIL-4-Practitioner-Deployment-Management Technical Training

A qualified person may be more popular and Pass ITIL-4-Practitioner-Deployment-Management Guaranteed respected by other people, No one can be more familiar with the exam than them.
