

ITIL-4-Practitioner-Release-Management Prüfungsfrage & ITIL-4-Practitioner-Release-Management Zertifikatsfragen

2025 Die neuesten ZertFragen ITIL-4-Practitioner-Release-Management PDF-Versionen Prüfungsfragen und ITIL-4-Practitioner-Release-Management Fragen und Antworten sind kostenlos verfügbar: <https://drive.google.com/open?id=1E21ugD7NcOyJcmP4wEgxgTaFM3enfNx2>

Die Fragen zur Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung von ZertFragen sind die gründlichste, die genaueste und die neueste Praxistest. Sie werden Selbstbewusstsein finden, die Schwierigkeiten beim ersten Versuch zu überwinden. Die Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung wird von allen Ländern akzeptiert. Alle Länder werden sie gleich behandeln. Das Peoplecert ITIL-4-Practitioner-Release-Management Zertifikat wird Ihnen nicht nur helfen, Ihre Fachkenntnisse und Fähigkeiten zu verbessern, sondern auch mehrere berufliche Chancen zu erhalten.

Peoplecert ITIL-4-Practitioner-Release-Management Prüfungsplan:

Thema	Einzelheiten
Thema 1	• AI and Automation: This section of the exam measures the skills of IT Operations Managers and addresses the use of AI and automation in delivering IT systems and applications that align with user needs. It ensures that software releases meet quality standards, are delivered on time, and stay within budget, using modern tools and intelligent technologies.
Thema 2	• Service Design: This section of the exam measures the skills of IT Release Managers and covers the principles and practices involved in designing services and products that are practical, useful, and aligned with stakeholder expectations. It focuses on ensuring that services are designed in a way that they can be effectively delivered and supported by the organization and its partners.
Thema 3	• Change: This section of the exam measures the skills of DevOps Engineers and focuses on how to manage and control changes within IT environments. It includes planning, executing, monitoring, and communicating changes to ensure minimal disruption while keeping stakeholders informed about the progress and impact of changes.

Die anspruchsvolle ITIL-4-Practitioner-Release-Management echte Prüfungsfragen von uns garantiert Ihre bessere Berufsaussichten!

Möchten Sie die Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung beim ersten Versuch bestehen? Auf der Webseite ZertFragen werden wir alle Ihrer Wünsche erfüllen und Ihnen versprechen, dass Sie die ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung in begrenzter Zeit einmalig bestehen. Denn ZertFragen verfügt über die Fragenkataloge zur Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung, die von erfahrenen IT-Experten entworfen werden und aus Fragen und Antworten kombiniert sind. Sie werden niemals bereuen, dass Sie ZertFragen gewählt haben. bearbeitet

Peoplecert ITIL 4 Practitioner: Release Management Exam ITIL-4-Practitioner-Release-Management Prüfungsfragen mit Lösungen (Q14-Q19):

14. Frage

A service owner is initiating the release planning and coordination process for a complex project. What is an example of the FIRST activity that the service owner should undertake in this instance?

- A. Select a release model that fits with the types of changes to be included in the release
- B. Check that an automated notification has been sent to stakeholders
- C. Ensure that the release procedures are appropriate for the particular release under consideration
- D. Test the service components and take remedial action as necessary

Antwort: A

Begründung:

The release planning and coordination process begins with defining the approach for the release. The ITIL 4 Practitioner: Release Management document states: "The first step in release planning and coordination is to select an appropriate release model that fits the types of changes to be included in the release. This ensures that the release approach aligns with the nature and complexity of the changes" (Section 3.2.1).

* Option A (Test the service components) is part of the release execution or testing phase, not the first step in planning.

* Option B (Ensure that the release procedures are appropriate) is a subsequent step after selecting the model, to confirm procedural alignment.

* Option C (Select a release model) is the first activity, as it sets the foundation for how the release will be structured and managed, especially for a complex project.

* Option D (Check that an automated notification has been sent) occurs later, during the communication phase of the release process.

The correct answer is C, as selecting the release model is the initial step in release planning.

15. Frage

What is a description of a release?

- A. A set of new service features that will benefit users
- B. The guidelines for collating two or more changes
- C. The repeated building and testing of code leading to deployment
- D. All updated service versions that are mandatory for users

Antwort: A

Begründung:

In ITIL 4, a release is defined as the output of the release management practice that is made available to users.

The ITIL 4 Practitioner: Release Management document states: "A release is a version of a service or a set of service components that is made available for use. It often includes new or changed features that deliver value to users" (Section 2.2).

* Option A (A set of new service features that will benefit users) aligns with the definition, as a release typically includes new or changed features intended to provide value to users.

* Option B (The repeated building and testing of code) describes a development process (e.g., continuous integration), not the

release itself.

* Option C (All updated service versions that are mandatory for users) is incorrect because releases are not always mandatory; ITIL 4 allows for push or pull approaches.

* Option D (Guidelines for collating changes) describes a process or policy, not the release itself.

The correct description of a release is a set of features or components made available for use, making A the correct answer.

16. Frage

An organization has a dedicated release management team that is effective in managing releases, but this team has very poor coordination with the change enablement team. What capability level of release management does this indicate?

- A. Level 1
- B. Level 4
- C. Level 3
- **D. Level 2**

Antwort: D

Begründung:

The ITIL capability model evaluates not only the effectiveness of a practice but also its integration with other practices. The ITIL 4 Practitioner: Release Management document states: "Level 2 (Managed) indicates that the practice is effective in its own scope but may lack integration with other practices. Level 3 (Defined) requires standardized processes and effective coordination with related practices like change enablement" (Section 5.2).

* The scenario shows that the release management team is effective (meeting Level 2), but poor coordination with the change enablement team indicates a lack of integration.

* Level 1 (Ad-hoc) would mean no consistent process, which isn't the case here since the team is effective.

* Level 3 requires integration and standardization across practices, which is not met due to poor coordination.

* Level 4 is even more advanced, requiring quantitative management, which isn't applicable.

The capability level is B (Level 2), as the practice is effective but lacks the integration needed for Level 3.

17. Frage

A new release manager wants to explain to the organization's service consumers the purpose of a new release management practice. What should the release manager say to the service consumers to help them realize the value of release management?

- A. The release management practice will ensure that new service features are available to the service operations team to reduce business losses.
- B. The release management practice will ensure that new service features are available to the service operations team to enable them to perform tests.
- **C. The release management practice will ensure the quick use of improved services after new service features have been made available.**
- D. The release management practice will ensure that new service features are available to users to mitigate the service provider's risks.

Antwort: C

Begründung:

The purpose of the release management practice in ITIL 4 is to make new and changed services and features available for use by ensuring a controlled and efficient release process. According to the ITIL 4 Practitioner: Release Management document, the purpose is defined as: "The purpose of the release management practice is to make new and changed services and features available for use" (Section 2.1). This focuses on delivering value to service consumers by enabling them to use improved or new services quickly and effectively.

* Option A focuses on the service operations team performing tests, which is part of the release process but not the primary value perceived by service consumers.

* Option B mentions reducing business losses for the operations team, which is an internal benefit, not a direct value for consumers.

* Option C aligns directly with the purpose: "the quick use of improved services after new service features have been made available" reflects the consumer-facing value of release management- ensuring they can benefit from new or improved services promptly.

* Option D focuses on mitigating the service provider's risks, which is a provider-centric benefit, not a consumer-focused value statement.

Thus, the correct answer is C, as it directly addresses the value to service consumers by emphasizing the availability and usability of improved services, aligning with the ITIL 4 definition of release management's purpose.

18. Frage

A release manager has decided on a policy of not allowing users to choose to accept software updates. What is this an example of?

- A. A 'pull' approach
- B. Continuous delivery
- C. Continuous integration
- **D. A 'push' approach**

Antwort: D

Begründung:

The ITIL 4 Practitioner: Release Management document explains the difference between push and pull approaches in release management: "In a push approach, updates are deployed to users without giving them a choice, often to ensure compliance or security. In a pull approach, users can choose when to adopt updates" (Section 3.2.3).

* Option A (A 'pull' approach) is incorrect because a pull approach allows users to choose when to accept updates, which contradicts the scenario.

* Option B (A 'push' approach) is correct, as the policy of not allowing users to choose means the updates are automatically deployed to them, fitting the definition of a push approach.

* Option C (Continuous delivery) and Option D (Continuous integration) are development practices, not release deployment strategies. Continuous delivery involves making releases available frequently, but it doesn't specify whether users must accept them (push) or can choose (pull).

The scenario describes a push approach, making B the correct answer.

19. Frage

.....

Ich glaube, egal in welcher Branche erwarten alle Beschäftigte eine gute Berufsaussichten. In der konkurrenzfähigen IT-Branche gilt es auch. Die Fachleute in der IT-Branche erwarten eine gute Beförderungsmöglichkeit. Viele IT-Fachleute sind sich klar, dass die Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung Ihren Traum verwirklichen kann. Und Zertfragen ist solch eine Website, die Ihnen zum Bestehen der Peoplecert ITIL-4-Practitioner-Release-Management Zertifizierungsprüfung verhilft.
