

JN0-105 Certification Exam & Questions JN0-105 Exam

What's more, part of that UpdateDumps JN0-105 dumps now are free: <https://drive.google.com/open?id=1QFmVO5QThzo2ws0TeHJhNBNd8M3IXXN9>

Are you still staying up for the JN0-105 exam day and night? If your answer is yes, then you may wish to try our JN0-105 exam materials. We are professional not only on the content that contains the most accurate and useful information, but also on the after-sales services that provide the quickest and most efficient assistants. With our JN0-105 practice torrent for 20 to 30 hours, we can claim that you are ready to take part in your JN0-105 exam and will achieve your expected scores.

The most important is that you just only need to spend 20 to 30 hours on practicing JN0-105 exam questions before you take the exam, therefore you can arrange your time to balance learning and other things. Of course, you care more about your test pass rate. We offer you more than 99% pass guarantee if you are willing to use our JN0-105 test guide and follow our plan of learning. If you fail to pass the exam with our Junos, Associate (JNCIA-Junos) torrent prep, you will get a full refund. However, if you want to continue studying our course, you can still enjoy comprehensive services through JN0-105 Torrent prep. We will update relevant learning materials in time. And we guarantee that you can enjoy a discount of more than one year.

Questions JN0-105 Exam - JN0-105 Latest Test Preparation

You can try the Juniper JN0-105 exam dumps demo before purchasing. If you like our Junos, Associate (JNCIA-Junos) (JN0-105) exam questions features, you can get the full version after payment. UpdateDumps JN0-105 Dumps give surety to confidently pass the Junos, Associate (JNCIA-Junos) (JN0-105) exam on the first attempt.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q89-Q94):

NEW QUESTION # 89

What are two types of transit traffic that traverse the forwarding plane of a Layer 3 router? (Choose two.)

- A. multicast traffic
- B. unicast traffic
- C. broadcast traffic
- D. exception traffic

Answer: A,B

Explanation:

Transit traffic that traverses the forwarding plane of a Layer 3 router includes both unicast and multicast traffic types. Unicast traffic is directed from a single source to a single destination, while multicast traffic is sent from one source to multiple destinations that are part of a multicast group. These types of traffic are efficiently routed through the network by leveraging the router's forwarding plane capabilities. Exception traffic, which requires special handling by the control plane, and broadcast traffic, which is typically limited to a single broadcast domain and not usually forwarded by Layer 3 routers, are not considered standard types of transit traffic for the forwarding plane of a router.

NEW QUESTION # 90

Exhibit.

Referring to the exhibit, which routing configuration is required for these two users to access the remote server?

- A. Users must connect directly to the router.
- B. A routing protocol must be enabled on the router.
- C. Users and the server require a default gateway.
- D. Trunk ports must be enabled on the switch.

Answer: C

Explanation:

For the users in the 10.1.1.0/24 subnet and the server in the 10.1.2.0/24 subnet to communicate with each other, they need to route packets through the router that connects these two subnets. Each user and the server need to have their default gateway set to the IP address of the router interface on their respective subnet (.254). This ensures that packets destined for other subnets are sent to the router, which then routes them to the correct destination subnet.

NEW QUESTION # 91

Click the Exhibit button.

```
Exhibit JUNIPER NETWORKS

user@router> show route

inet.0: 13 destinations, 14 routes (13 active, 0 holddown, 0
hidden)
+ = Active Route, - = Last Active, * = Both

0.0.0.0/0          *[Static/5] 00:05:38
                   > to 172.29.1.1 via ge-0/0/3.0
```

Referring the exhibit, what does the highlighted number indicate?

- A. metric is 5
- B. route preference is 5
- C. cost is 5
- D. hop count is 5

Answer: B

Explanation:

In the exhibit shown, the highlighted number next to the route type (Static) within the square brackets indicates the route preference, also known as the administrative distance. In Junos, the route preference is a value that determines the priority of the route source. Lower numbers indicate a higher priority when the routing table is being calculated. The route preference is used to select the best route when multiple paths to the same destination exist from different routing sources. The number 5 is unusually low for a static route by default, suggesting it has been manually configured to override other route types.

NEW QUESTION # 92

Click the Exhibit button.

Referring to the exhibit, what should be configured on R1 to advertise a default static route into OSPF?

- A. a routing policy

- B. a firewall filter
- C. a management interface
- D. a loopback interface

Answer: A

Explanation:

To advertise a default static route into OSPF on router R1, a routing policy should be configured. This policy would typically include a statement to match the default route (0.0.0.0/0) and then apply an action to set the route as an OSPF external type, which would then be redistributed into the OSPF domain. The routing policy is a set of conditions and actions that determine how routes are imported into or exported from the routing table and how routes are shared between routing instances or routing protocols. After defining the policy, it must be applied to OSPF under the export section of the OSPF configuration on R1. This process will allow R1 to announce the default route to other OSPF routers in the network, which then can use it as a gateway of last resort to reach the Internet or other networks not explicitly known to the OSPF domain.

NEW QUESTION # 93

What are two functions of the routing protocol daemon (rpd)? (Choose two.)

- A. It provides access to the CLI.
- B. It generates chassis alarms.
- C. It maintains routing tables.
- D. It creates forwarding tables.

Answer: C,D

Explanation:

The Routing Protocol Daemon (rpd) is a critical component in Juniper Networks devices, responsible for all routing operations. It maintains routing tables, which hold information about network paths and destinations derived from various routing protocols. These tables are used to make decisions about where to send packets. Additionally, rpd generates forwarding tables based on the information in the routing tables. The forwarding tables are then used by the Packet Forwarding Engine (PFE) to actually forward packets to their next hop or final destination.

NEW QUESTION # 94

.....

Our product boosts many merits and useful functions to make you to learn efficiently and easily. Our JN0-105 guide questions are compiled and approved elaborately by experienced professionals and experts. The download and tryout of our JN0-105 torrent question before the purchase are free and we provide free update and the discounts to the old client. Our customer service personnel are working on the whole day and can solve your doubts and questions at any time. Our online purchase procedures are safe and carry no viruses so you can download, install and use our JN0-105 Guide Torrent safely.
