Pass Guaranteed Juniper JN0-105 - First-grade Junos, Associate (JNCIA-Junos) Exams Dumps

The development and progress of human civilization cannot be separated from the power of knowledge. You must learn practical

knowledge to better adapt to the needs of social development. Now, our JN0-105 learning materials can meet your requirements. You will have good command knowledge with the help of our study materials. The certificate is of great value in the job market. Our JN0-105 Study Materials can exactly match your requirements and help you pass exams and obtain certificates. As you can see, our products are very popular in the market. Time and tides wait for no people.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q63-Q68):

NEW QUESTION # 63

Which command displays all IPv6 routes in the default routing instance?

- A. showroute table inet.1
- B. showroute table inet6.0
- C. showroute table inet6.1
- D. showroute table inet.0

Answer: B

Explanation:

The show route table inet6.0 command displays all IPv6 routes in the default routing instance. In Junos OS, the routing table for IPv6 addresses is referred to as inet6.0, whereas inet.0 is used for IPv4 unicast routes.

The other options do not correspond to the correct IPv6 routing table.

References:

* Juniper official documentation: Junos OS Routing Tables Overview.

NEW QUESTION # 64

Which process in the Junos OS is responsible for maintaining routing protocols and tables?

- A. chassisd
- B. mgd
- C. dcd
- D. rpd

Answer: D

Explanation:

The Routing Protocol Daemon (rpd) in Junos OS is responsible for maintaining routing protocols and tables.

It handles all routing information, including the calculation of routes and the population of the routing table, making it crucial for dynamic routing operations.

NEW QUESTION # 65

Exhibit

[edit]

```
user@router1 set interfaces ge-0/1/2 unit 0 family inet address 172.16.101.1/24 [edit] user@router# commit check configuration check succeeds
```

[edit]

user@router#

You need to configure interface ge-0/1/2 with an IP address of 172.16.100.1/24. You have accidentally entered 172.16.101.1/24 as shown in the exhibit.

Which command should you issue to solve the problem?

- A. [edit] user@router# rollback rescue
- B. (edit) user@router# rollback 1
- C. [edit] user@router# rollback 0
- D. [edit] user@router# rollback 2

Answer: B

Explanation:

If you've committed a configuration and then need to revert to the previous configuration, the rollback command is used. Since the

incorrect IP address has not been committed, as indicated by the `commit check` command being successful, issuing `rollback 1` will undo the changes made in the current session, which includes the accidental entry of the IP address.

NEW QUESTION # 66

You are creating a new policy to accept and redistribute routes into your IGP.

In this scenario, which match criteria would you use to identify the route prefixes to select?

- A. instance
- B. neighbor
- C. route-filter
- D. route-type

Answer: C

Explanation:

When creating a new policy to accept and redistribute routes into your Interior Gateway Protocol (IGP), the route-filter match criteria is used to identify the route prefixes to select. The route-filter statement specifies which prefixes should be matched in a policy. This allows for precise control over which routes are accepted and redistributed, facilitating efficient and secure routing policies within the network.

References:

- * "show | display set | match ge-0/0/2" indicating command examples and match criteria from Useful Juniper Commands.txt.
- * Juniper official documentation: Routing Policy and Firewall Filters Configuration Guide.

NEW QUESTION # 67

Which two statements are correct about the `employee@R1>` prompt? (Choose two.)

- A. You are in operational mode.
- B. You are in configuration mode.
- C. You are at a shell prompt.
- D. R1 is the hostname of your device.

Answer: A,D

Explanation:

In Junos OS, the prompt `employee@R1>` indicates the current context of the user interface. The 'R1' part of the prompt signifies the hostname of the device, which in this case is 'R1'. The absence of a '#' symbol at the end of the prompt suggests that the user is in operational mode, as opposed to configuration mode which is indicated by a prompt ending in '#'. Operational mode allows users to view the status of the device and execute operational commands, but does not allow for configuration changes.

NEW QUESTION # 68

.....

Our product boasts three versions which include PDF version, PC version and APP online version. The Junos, Associate (JNCIA-Junos) test guide is highly efficient and the forms of the answers and questions are the same. Different version boasts their own feature and using method, and the client can choose the most convenient method. For example, PDF format of JN0-105 guide torrent is printable and boasts instant access to download. You can learn at any time, and you can update the JN0-105 Exam Questions freely in any day of one year. It provides free PDF demo. You can learn the APP online version of JN0-105 guide torrent in your computer, cellphone, laptop or other set. Every version has their advantages so you can choose the most suitable method of Junos, Associate (JNCIA-Junos) test guide to prepare the exam.
