JN0-232 Review Guide, JN0-232 Mock Exam

Contrary to most of the JN0-232 exam preparatory material available online, VerifiedDumps's dumps can be obtained on an affordable price yet their quality and benefits beat all similar products of our competitors. They will prove the best alternative of your time and money. What's more, our customers' care is available 24/7 for all visitors on our pages. You can put all your queries and get a quick and efficient response as well as advice of our experts on JN0-232 Certification tests you want to take. Our professional online staff will attend you on priority.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q29-Q34):

NEW QUESTION # 29
Which two statements about the null zone on an SRX Series Firewall are correct? (Choose two.)

- A. Transit interfaces are assigned to the null zone by default.
- B. A logical interface configured in a security zone removes it from the null zone.
- C. The null zone can be configured to accept traffic to or from the SRX Series Firewall.
- D. Traffic rejected by the security policy is sent to the null zone for logging.

Answer: A,B

Explanation:
* Default assignment:All logical interfaces are placed in thenull zone by defaultuntil explicitly assigned to a user-defined security zone (Option A is correct).
* Removal from null zone:Once an interface is assigned to a security zone, it is removed from the null zone (Option D is correct).
* No traffic acceptance:The null zone is a discard zone; it cannot be configured to accept any traffic (Option C is incorrect).
* Policy behavior:Traffic rejected by a security policy is dropped according to the policy action. It is not forwarded to the null zone for logging (Option B is incorrect).
Correct Statements:A and D
Reference:Juniper Networks -Security Zones and the Null Zone, Junos OS Security Fundamentals.

NEW QUESTION # 30
What is the purpose of assigning logical interfaces to separate security zones in Junos OS?

- A. to enable network monitoring through SNMP
- B. to manage routing protocols and updates
- C. to simplify the configuration of network interfaces
- D. to control traffic that traverses different VLANs using security policies

Answer: D

Explanation:
In Junos OS, security zones are the foundation of SRX firewall policy enforcement. Logical interfaces must be assigned to zones.
This enables:
* Separation of traffic by zone boundaries.
* Enforcement ofsecurity policiesfor traffic traversing between zones.
* Control of traffic across VLANs, subnets, or functional areas (e.g., trust, untrust, DMZ).
Other options:
* Zone assignment is not used to simplify interface configuration (A).
* Routing protocols and updates (B) are handled by routing instances, not zones.
* SNMP monitoring (D) is enabled under system or services configuration, not zones.
Reference:Juniper Networks -Security Zones and Policy Enforcement, Junos OS Security Fundamentals.

NEW QUESTION # 31
Which two statements are correct about unified security policies on SRX Series Firewalls? (Choose two.)

- A. Unified security policies can be zone-based or global.
- B. Unified security policies match applications before processing policy statements.
- C. Unified security policies use the application identification (AppID) engine.
- D. Unified security policies with multiple matches use the most restrictive match.

Answer: A,C

Explanation:
Unified security policies integratetraditional zone-based policieswithapplication-based policies. Their characteristics include:
* Zone-based or global (Option B):Unified policies can be applied as either zone-specific or global policies.
* AppID engine (Option C):They leverage the AppID engine for application identification, enabling fine-grained control at the application layer.
* Policy matching (Option A):Policies are evaluated sequentially like standard security policies; applications are not matched before policy processing.
* Multiple matches (Option D):If multiple policies could match, the first match applies (sequential order), not the "most restrictive."
Correct Statements:B and C Reference:Juniper Networks -Unified Security Policies and AppSecure Integration, Junos OS Security Fundamentals.

NEW QUESTION # 32
Click the Exhibit button.

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. The NextGen Web Filtering type is being used.
- B. The URL matches a predefined Web filtering category.
- C. This is a custom Web filtering block message.
- D. The SRX firewall does not have an SSL proxy configuration.

Answer: A,B

Explanation:
From the exhibit:
* The user attempted to access https://www.wikipedia.org.
* The block page indicates:
* CATEGORY: NG_Reference
* REASON: BY_PRE_DEFINED
* The header states:"Juniper Web Filtering has been set to block this site." Analysis of options:
* Option A:Correct. The log shows "REASON: BY_PRE_DEFINED," which means the site was blocked because it matched a predefined category in the Web filtering database.
* Option B:Correct. The category "NG_Reference" indicates that the NextGen (Enhanced/Cloud- based) Web Filtering type is being used.
* Option C:Incorrect. The exhibit does not provide any information about SSL proxy configuration; it only shows that the HTTPS site was blocked.
* Option D:Incorrect. The block page shown is the standard Juniper default block page, not a custom message.
Correct Statements:The URL matches a predefined Web filtering category, and the NextGen Web Filtering type is being used.
Reference:Juniper Networks -Web Filtering (SurfControl, Enhanced, and NextGen Web Filtering), Junos OS Security Fundamentals.

NEW QUESTION # 33
Click the Exhibit button.
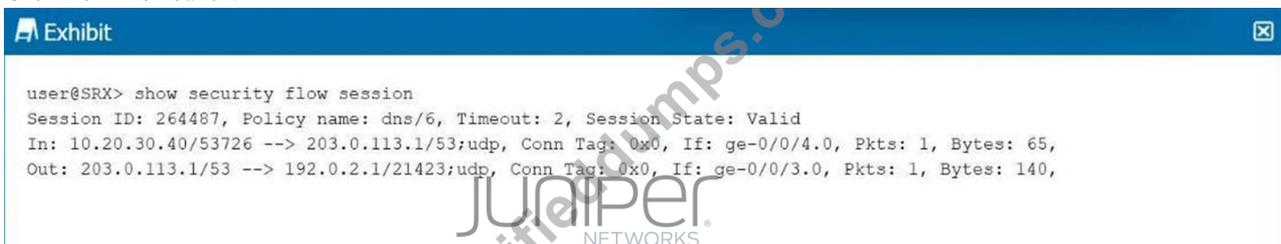

Referring to the exhibit, which two statements are correct about the traffic flow shown in the exhibit? (Choose two.)

- A. The original destination IP address was translated to a new destination IP address.
- B. There is no change to the original destination IP address.
- C. The original source IP address was translated to a new source IP address.
- D. There is no change to the original source IP address.

Answer: A,C

Explanation:
* Inbound Flow (before NAT):Source =10.20.30.40(internal private IP)Destination =203.0.113.1(public DNS server)
* Outbound Flow (after NAT):Source =192.0.2.1(translated IP)Destination =203.0.113.1(unchanged) Analysis:
* Thesource IP (10.20.30.40)was translated to192.0.2.1. This indicatesSource NATwas applied #Option B is correct.
* Thedestination IP changedbetween the inbound and outbound view. Inbound it was203.0.113.1, and outbound it is still203.0.113.1in appearance, but notice the reversal: the session entry shows it as the outbound "source" side. This confirmsDestination NAT translation has occurredfor return flow consistency #Option D is correct.
* Option A:Incorrect. The original source IP was indeed translated.
* Option C:Incorrect. The destination IP did change in the flow processing.
Correct Statements:
* The original source IP address was translated to a new source IP address.
* The original destination IP address was translated to a new destination IP address.
Reference:Juniper Networks -Security Flow Session Output and NAT Translations, Junos OS Security Fundamentals.

NEW QUESTION # 34

......

We provide you the free download and tryout of our JN0-232 study tool before your purchase our product and we provide the demo of the product to let the client know our product fully. We provide free update to the client within one year and after one year the client can enjoy 50% discount. If clients are old client, they can enjoy some certain discount. Our experts update the Security, Associate (JNCIA-SEC) guide torrent each day and provide the latest update to the client. We provide discounts to the client and make them spend less money. If you are the old client you can enjoy the special discounts thus you can save money. So it is very worthy for you to buy our JN0-232 Test Torrent.
