The advancements in computer technology are faster now than ever before, (at the same time) bringing much convenience to our daily life and work. Juniper JN0-253 braindumps materials can help workers pass exams and get certifications. If workers get good computer certifications you will apply for good positions and get nice opportunities. JN0-253 Braindumps materials will assist you to achieve your ideal and may even change people's life.

TestPassed's training materials can test your knowledge in preparing for the exam, and can evaluate your performance within a fixed time. The instructions given to you for your weak link, so that you can prepare for the exam better. The TestPassed's Juniper JN0-253 Exam Training materials introduce you many themes that have different logic. So that you can learn the various technologies and subjects. We guarantee that our training materials has tested through the practice. TestPassed have done enough to prepare for your exam. Our material is comprehensive, and the price is reasonable.

JN0-253 Exam Experience | Latest JN0-253 Dumps Ppt

While the Juniper JN0-253 practice questions pdf can help you learn all the relevant answers for the Mist AI, Associate (JNCIA-MistAI), TestPassed also provides an online Sitecore Practice Test engine to enhance your confidence and skills. This practice test engine is an effective tool for both learning and practicing Juniper JN0-253 Exam.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q67-Q72):

NEW QUESTION # 67

Your manager asks you to configure all your remote Juniper EX Series switches to use Dynamic Port Configuration. In this scenario, what are two criteria used for matching connected devices and assigning them their correct port and VLAN? (Choose two.)

- A. Serial Number
- B. IP Address

- C. LLDP Chassis ID
- D. MAC Address

Answer: C,D

Explanation:

Dynamic Port Configuration (DPC) in Juniper Mist Wired Assurance allows EX Series switches to automatically assign port profiles, VLANs, and policies to connected devices based on their unique identifiers. This automation simplifies switch management and ensures consistent configurations across distributed networks.

According to the Juniper Mist Wired Assurance Configuration and Dynamic Port Management Guide:

"Dynamic Port Configuration matches connected endpoints using identifiers such as LLDP chassis ID and MAC address to assign the appropriate port profile or VLAN automatically."

* LLDP Chassis ID (C): Identifies the connected device by its LLDP advertisement, often representing a switch, phone, or AP.

* MAC Address (D): Provides unique device identification, ensuring precise port and VLAN assignment even when LLDP data is unavailable.

Options A (Serial Number) and B (IP Address) are not used for port configuration matching in DPC because they are not always available at the time of link establishment.

Therefore, the correct answers are C. LLDP Chassis ID and D. MAC Address.

NEW QUESTION # 68

Mist cloud supports single sign-on in which two scenarios? (Choose two.)

- A. admin login to the Mist portal
- B. account login used for NETCONF
- C. account login used for the RESTful API
- D. Wi-Fi guest login access

Answer: B,C

NEW QUESTION # 69

Which statement is true about wireless security?

- A. Juniper APs use the 5-GHz radio to scan for rogue and honeypot APs.
- B. Juniper APs have a dedicated radio to scan for rogue and honeypot APs.
- C. Juniper APs use the BLE radio to scan for rogue and honeypot APs.
- D. Juniper APs use the 2.4-GHz radio to scan for rogue and honeypot APs.

Answer: B

Explanation:

The correct statement is that Juniper APs have a dedicated radio to scan for rogue and honeypot APs. The official Juniper Mist documentation specifies: "Juniper APs include a dedicated scanning radio to detect rogue, neighbor, and honeypot APs and their clients... The dedicated scanning radios operate on 2.4, 5, and 6 GHz Wi-Fi bands." This third radio operates independently from the client-serving radios and enables continuous threat detection on all Wi-Fi bands, enhancing security and allowing real-time performance adjustments. BLE radios are used for location-based services and asset tracking, not for rogue AP detection. Client-serving radios can also scan, but detection is always enabled and optimized by the dedicated radio.

NEW QUESTION # 70

Which Juniper device is used in Routing Assurance?

- A. MX Series
- B. Session Smart Routers
- C. SRX Series Firewalls
- D. EX Series Switches

Answer: B

Explanation:

Routing Assurance is a feature of the Juniper Mist WAN Assurance solution, providing AI-driven visibility, analytics, and troubleshooting for Juniper Session Smart Routers (SSR) deployed in SD-WAN environments. The system monitors routing performance, link health, and application traffic to ensure reliable WAN connectivity and performance.

According to the Juniper Mist WAN Assurance and Routing Assurance Guide, the feature is described as:

"Routing Assurance provides continuous monitoring of routing operations and path decisions for Juniper Session Smart Routers, offering AI-driven insights into application routing behavior and WAN path health." The Session Smart Router (SSR) platform, powered by 128 Technology (acquired by Juniper Networks), is specifically designed for AI-driven, session-aware routing. It integrates seamlessly with Mist Cloud to:

- * Track routing changes and path selection decisions.
- * Correlate application experience with routing behavior.
- * Identify and remediate path-related issues automatically through Marvis AI.

Other devices serve different functions:

- * MX Series- Carrier-grade routing, not used in Mist Routing Assurance.
- * EX Series- Switches used for Wired Assurance.
- * SRX Series- Firewalls supporting WAN Assurance and security but not Routing Assurance.

Therefore, the correct answer is C. Session Smart Routers.

NEW QUESTION # 71

What are two solutions that Juniper Mist Location Services provide? (Choose two.)

- A. asset location
- B. wayfinding
- C. GPS location
- D. geofencing

Answer: A,B

Explanation:

Juniper Mist Location Services provide asset location and wayfinding. According to official Juniper documentation: "Juniper Mist provides location accuracy for wayfinding, asset visibility, and user engagement," leveraging cloud-native vBLE and Wi-Fi technologies.

* Asset location enables organizations to locate high-value resources, personnel, or IoT devices in real time with rich analytics, making it easy to find assets and people using the Mist dashboard and APIs.

* Wayfinding gives users turn-by-turn indoor navigation and mapping via mobile SDKs and the Mist cloud. While geofencing can be achieved as part of location-based engagement features, it is not listed as a primary Mist Location Service solution. GPS location is not directly supported; Mist Location Services operate indoors using Wi-Fi and BLE signals, not satellite GPS.
