JN0-336 Practice Questions: Security, Specialist (JNCIS-SEC) & JN0-336 Exam Dumps Files

Nowadays the competition in the society is fiercer and if you don't have a specialty you can't occupy an advantageous position in the competition and may be weeded out. Passing the Security, Specialist (JNCIS-SEC) test certification can help you be competent in some area and gain the competition advantages in the labor market. If you buy our JN0-336 Study Materials you will pass the test smoothly. With a high pass rate as 98% to 100%, you will know that our JN0-336 practice engine can provide you with the best pass percentage.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q55-Q60):

NEW QUESTION # 55

You want to show tabular data for operational mode commands.
In this scenario, which logging parameter will provide this function?

- A. session-close
- B. permit
- C. session-init
- **D. count**

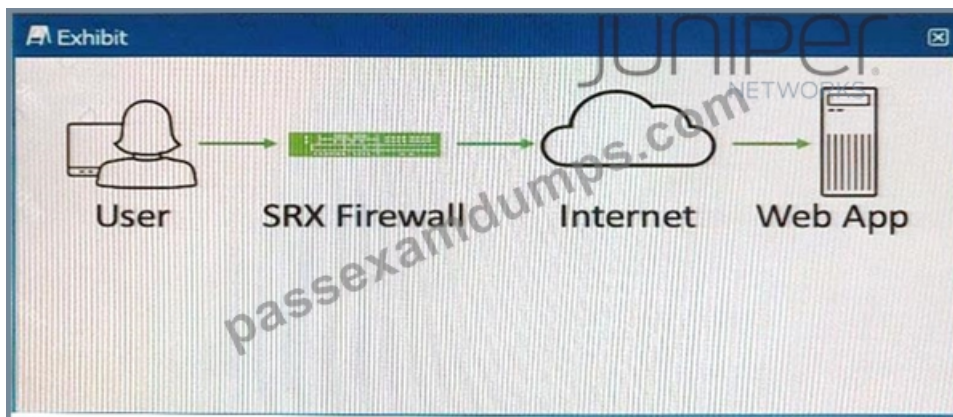

Answer: D

Explanation:

The logging parameter that will provide the function of showing tabular data for operational mode commands is count. The count parameter displays the number of packets and bytes that match a security policy and the action taken by the policy. The count parameter can be used with the show security policies hit-count command to display the policy counters in a tabular format. The count parameter can also be used with the show security flow session command to display the session counters in a tabular format. Reference: = show security policies hit-count, show security flow session

NEW QUESTION # 56

Exhibit

Referring to the exhibit, which two statements describe the type of proxy used? (Choose two.)

- A. server protection proxy
- B. client protection proxy
- C. forward proxy
- D. reverse proxy

Answer: C,D

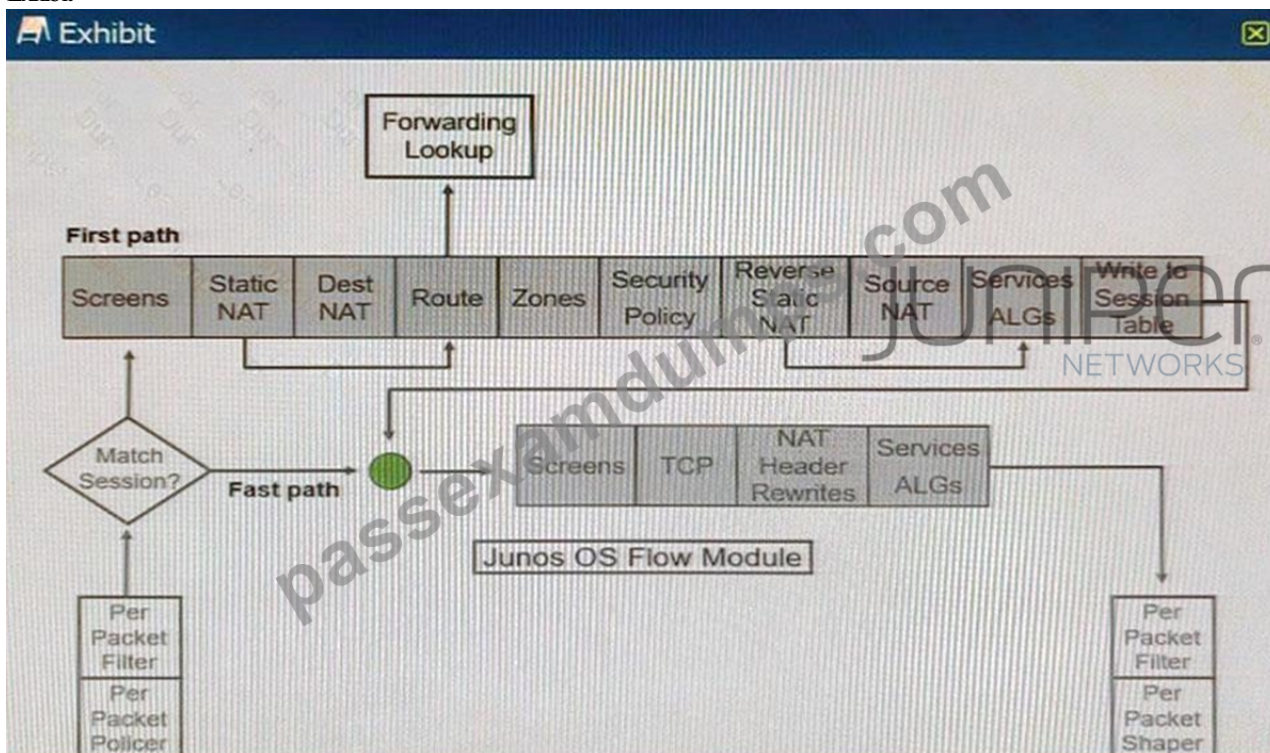

Explanation:

In the exhibit, the SRX Firewall could be acting as a forward proxy, managing outbound internet requests from internal users or clients within a private network to the internet. Forward proxies are commonly used to control and monitor outbound traffic, provide content caching to improve load times, and enforce company policies.

The scenario can also imply a reverse proxy setup where the SRX Firewall might be configured to direct incoming requests from the internet to the web application. Reverse proxies are used to balance load, enhance security, manage SSL encryption, and provide additional caching functionalities for inbound traffic to servers.

NEW QUESTION # 57

Exhibit

Referring to the SRX Series flow module diagram shown in the exhibit, where is application security processed?

- A. Services ALGs
- B. Security Policy
- C. Forwarding Lookup

- D. Screens

Answer: A

NEW QUESTION # 58

Which two features are configurable on Juniper Secure Analytics (JSA) to ensure that alerts are triggered when matching certain criteria? (Choose two.)

- A. building blocks
- B. assets
- C. events
- D. tests

Answer: A,D

Explanation:

Building blocks in JSA are reusable components that define specific attributes or behaviors in the network traffic. They can be used to create complex criteria for alerts. By combining multiple building blocks, you can specify detailed conditions under which alerts should be triggered, such as combinations of events or specific sequences of actions within the network.

Tests in JSA are conditions or rules that analyze log or flow data to detect unusual or malicious activity.

You can configure tests to evaluate the data against predefined criteria, which, when met, will trigger alerts. These tests are essential for identifying potential security incidents and ensuring that relevant alerts are issued in a timely manner.

NEW QUESTION # 59

Your JIMS server is unable to view event logs.

Which two actions would you take to solve this issue? (Choose two.)

- A. Enable the correct host-inbound-traffic rules on the SRX Series devices.
- B. Enable remote event log management within Windows Firewall on the necessary domain controllers.
- C. Enable remote event log management within Windows Firewall on the JIMS server.
- D. Enable remote event log management within Windows Firewall on the necessary Exchange servers.

Answer: B,C

Explanation:

JIMS needs to access the event logs from domain controllers to function properly, as it relies on these logs to track user and device activity across the network. If the Windows Firewall on the domain controllers is blocking this access, enabling remote event log management will allow JIMS to retrieve the necessary information.

While it's less common, ensuring that any firewall settings on the JIMS server itself do not block outgoing requests or responses related to event log management is also crucial. This ensures that JIMS can send out requests and receive responses without any hindrance from its own firewall.

NEW QUESTION # 60

.....

About your blurry memorization of the knowledge, our JN0-336 learning materials can help them turn to very clear ones. We have been abiding the intention of providing the most convenient services for you all the time on JN0-336 study guide, which is also the objection of us. We also have high staff turnover with high morale after-sales staff offer help 24/7. So our customer loyalty derives from advantages of our JN0-336 Preparation quiz.
