itPass4sure Juniper JN0-363 Dumps are an indispensable material in the certification exam. It is no exaggeration to say that the value of the certification training materials is equivalent to all exam-related reference books. After you use it, you will find that everything we have said is true.

The JN0-363 certification exam covers a range of topics related to service provider routing and switching, including routing protocols, MPLS, BGP, Ethernet technologies, and more. This comprehensive exam is designed to test the knowledge and skills of IT professionals who work in service provider environments.

The JNCIS-SP Certification Exam is a rigorous exam that requires a significant amount of preparation and study. Candidates must have a thorough understanding of the Junos operating system and the ability to implement it in a service provider environment. JN0-363 Exam consists of 65 multiple-choice questions and has a time limit of 90 minutes. A passing score is 65% or higher.

JN0-363 Training Kit - Reliable JN0-363 Test Simulator

This professionally designed desktop practice exam software is customizable, which helps you to adjust timings and questions of the mock tests. This feature of Windows-based Service Provider Routing and Switching, Specialist (JNCIS-SP) software helps you

improve time-management abilities and weak areas of the test preparation. We regularly upgrade this Juniper JN0-363 Practice Exam software after receiving valuable feedback from experts worldwide.

Juniper JN0-363 Certification Exam is designed to test the skills and knowledge of individuals who specialize in service provider routing and switching. Service Provider Routing and Switching, Specialist (JNCIS-SP) certification is ideal for network engineers, technicians, and other professionals who work with Juniper Networks technology and are responsible for managing network infrastructures, routing protocols, and switches. The JNCIS-SP certification validates a candidate's ability to install, configure, operate, and troubleshoot Juniper Networks routing and switching platforms in a service provider environment.

Juniper Service Provider Routing and Switching, Specialist (JNCIS-SP) Sample Questions (Q56-Q61):

NEW QUESTION # 56

The routers shown in the exhibit are configured for segment routing. In this scenario, what is the adjacency SIO that Router B advertises to Router A?

- A. 10.1.1.2
- B. 0
- C. 1
- D. 10.1.1.1

Answer: D

NEW QUESTION # 57

Click the Exhibit button. Referring to the exhibit, from which device(s) does R3 learn about Route X?

- A. R2 only
- B. directly from the router in AS 64502
- C. both R2 and R1
- D. R1 only

Answer: D

Explanation:

R2 can not forward IBGP learned routes to another IBGP neighbor to prevent loops.

NEW QUESTION # 58

Exhibit

You want the R1 and R3 routers to forward traffic destined to the 203.0.113.0/24 network through R2. Which BGP attribute would you modify to satisfy this requirement?

- A. community
- **B. MED**
- C. local preference
- D. origin

Answer: B

NEW QUESTION # 59

Click the Exhibit button. In the exhibit, three IPv6 addresses are listed. Which two statements are true? (Choose two.)

- A. The second address is incomplete and not correct.
- **B. All three addresses are the same.**
- **C. The first address is complete and correct.**
- D. The third address is not formatted correctly.

Answer: B,C

NEW QUESTION # 60

Exhibit.

```
Exhibit

[edit routing-options]
user@router# show
aggregate {
  route 172.21.0.0/22;
}

[edit routing-options]
user@router# run show route protocol aggregate

inet.0: 21 destinations, 21 routes (20 active, 0 holddown, 1 hidden)
inet6.0: 10 destinations, 10 routes (10 active, 0 holddown, 0 hidden)

[edit routing-options]
user@router# run show route hidden

inet.0: 21 destinations, 21 routes (20 active, 0 holddown, 1 hidden)
+ = Active Route, - = Last Active, * = Both

172.21.0.0/22    (Aggregate) 00:12:19
                Reject
inet6.0: 10 destinations, 10 routes (10 active, 0 holddown, 0 hidden)
```

Referring to the exhibit, you have configured an aggregate route that represents the 172.21.0.0/24, 172.21.1.0/24, and 172.21.2.0/24 networks. However, when you view the routing table, your new route is hidden. Which action would you perform to determine the problem?

- A. Verify that you have configured a policy on the device to accept aggregate routes.
- B. Verify that you have defined a metric value for the aggregate route.
- C. Verify that you have active contributing routes on the device.
- **D. Verify that you have set the preference to a lower default value.**

Answer: D

Explanation:

The exhibit shows an aggregate route configuration for the network 172.21.0.0/22, which would summarize the specific networks 172.21.0.0/24, 172.21.1.0/24, and 172.21.2.0/24. For an aggregate route to be active, it must have contributing routes in the routing table. If the route is hidden, it usually means there are no contributing routes that are active or the policy applied to the aggregate does not match any of the specific routes. Therefore, the first step in troubleshooting would be to verify that there are indeed active contributing routes for the aggregate to be valid.
