Mist AI Wired, Specialist (JNCIS-MistAI-Wired) free download pdf & JN0-460 real practice torrent

Our JN0-460 test braindumps are carefully developed by experts in various fields, and the quality is trustworthy. What's more, after you purchase our products, we will update our JN0-460 exam questions according to the new changes and then send them to you in time to ensure the comprehensiveness of learning materials. We also have data to prove that 99% of those who use our JN0-460 Latest Exam torrent to prepare for the exam can successfully pass the exam and get JN0-460 certification. As long as you decide to choose our JN0-460 exam questions, you will have an opportunity to prove your abilities, so you can own more opportunities to embrace a better life.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which two Marvis Wired Assurance actions require a Juniper switch?(Choose two.)

- A. missing VLAN
- B. negotiation mismatch
- C. bad cable
- D. EAP/802.1X failure

Answer: B,C

Explanation:

Marvis, the AI-driven virtual network assistant in Mist, provides real-time troubleshooting insights for both wired and wireless devices.

When used with Wired Assurance, certain actions require Juniper EX or QFX switches for telemetry collection.

Two of these wired-specific actions are:

Bad Cable Detection- triggered when electrical faults or poor cable quality are observed through LLDP or physical diagnostics.

NEW QUESTION # 48

Which of the following are features of managing switches with Mist AI Wired Assurance? (Select two)

- A. AI-driven insights for switch health
- B. Manual switch discovery
- C. Real-time gaming
- D. Automatic switch configuration rollback

Answer: A,D

NEW QUESTION # 49

In Juniper Mist cloud services, service level expectation (SLE) telemetry is collected from every device and stored for up to how long?

- A. 24 hours
- B. 1 month
- C. 7 days
- D. 2 months

Answer: B

Explanation:

Juniper Mist AI collects telemetry for Service Level Expectations (SLEs) across wired and wireless devices.

This telemetry includes metrics such as time-to-connect, throughput, coverage, and switch performance.

"Service Level Expectation (SLE) data is collected from every device and stored for up to one month in the Mist Cloud. This allows administrators to analyze historical performance trends and troubleshoot issues based on real-time and historical data." Option B (2 months): Incorrect - data is not retained this long.

Option C (7 days): Incorrect - telemetry retention is longer.

Option D (24 hours): Incorrect - too short for Mist SLE analytics.

Option A (1 month): Correct - Mist Cloud retains SLE telemetry for 30 days (1 month).

NEW QUESTION # 50

When adopting your switches into the Juniper Mist Cloud, you notice that the status of the switches is

"Unassigned."

In this scenario, which additional step is required for the switches to show as "Connected" in the Juniper Mist dashboard?

- A. You must restart each switch before Mist recognizes it on your dashboard.
- B. Use the Mist AI mobile application and rescan the QR code for adoption to your Mist site.
- C. Select each switch and assign them to your selected site.
- D. Troubleshoot the system configuration with the [show system connections | grep 2200] and [show configuration system services outbound-ssh] commands.

Answer: C

Explanation:

When a switch is successfully onboarded into Mist Cloud but shows "Unassigned," it means the device has been claimed into the organization but has not yet been assigned to a specific site.

"After claiming switches into an organization, you must assign each switch to a site for it to transition from Unassigned to Connected

state and begin receiving configuration and telemetry updates." Option A:Incorrect - rescanning is not needed once the device is claimed.

Option B:Incorrect - reboots are unnecessary for assignment recognition.

Option C:Incorrect - these commands are for connectivity troubleshooting, not site assignment.

Option D:Correct- assigning each switch to itsintended siteenables full Mist management and connectivity state.

NEW QUESTION # 51

You are asked to forward event messages from Mist to an external log collector.

In this scenario, which feature would enable this capability?

- A. syslog
- B. NETCONF
- C. SNMP traps
- D. webhooks

Answer: A

Explanation:

In Juniper Mist, thesyslogfeature allows administrators to forward event messages and alerts from the Mist cloud to an external syslog server.

This is often used for centralized event monitoring, compliance, and correlation with tools like Splunk or SIEM systems.

Syslog operates over UDP or TCP and can capture switch events, system logs, and Marvis actions for both Wired and Wireless networks.
