# JN0-481 100% Correct Answers & JN0-481 Authorized Test Dumps

BONUS!!! Download part of Prep4away JN0-481 dumps for free: https://drive.google.com/open?id=14VgJBao4t6AycmAFCKOPGDi-F-K4HmPp

Whether you are at home or out of home, you can study our JN0-481 test torrent. You don't have to worry about time since you have other things to do, because under the guidance of our JN0-481 study tool, you only need about 20 to 30 hours to prepare for the exam. Sincere and Thoughtful Service Our goal is to increase customer's satisfaction and always put customers in the first place. As for us, the customer is God. We provide you with 24-hour online service for our JN0-481 Study Tool. If you have any questions, please send us an e-mail. We will promptly provide feedback to you and we sincerely help you to solve the problem.

Without bothering to stick to any formality, our JN0-481 learning quiz can be obtained within five minutes. No need to line up or queue up to get our JN0-481 practice materials. They are not only efficient on downloading aspect, but can expedite your process of review. No harangue is included within JN0-481 Training Materials and every page is written by our proficient experts with dedication. And we have demos of the JN0-481 study guide, you can free download before purchase.

>> JN0-481 100% Correct Answers <<

JN0-481 Authorized Test Dumps, Test JN0-481 Dump

Boring life will wear down your passion for life. It is time for you to make changes. Our JN0-481 training materials are specially

prepared for you. In addition, learning is becoming popular among all age groups. After you purchase our JN0-481 Study Guide, you can make the best use of your spare time to update your knowledge. For we have three varied versions of our JN0-481 learning questions for you to choose so that you can study at differents conditions.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q37-Q42):

NEW QUESTION # 37
Which two actions are required during Juniper Apstra's deploy phase? (Choose two.)

- A. Assign user roles to the blueprint.
- B. Assign interlace maps to the blueprint.
- C. Assign resources to the blueprint.
- D. Assign device profiles to the blueprint.

Answer: C,D

Explanation:
The deploy phase is the final step in the Juniper Apstra data center fabric design and deployment process. In this phase, you apply the Apstra-rendered configuration to the devices and verify the intent of the blueprint. Based on the web search results, we can infer the following actions are required during the deploy phase:
Assign device profiles to the blueprint. This action associates a specific vendor model to each logical device in the blueprint. Device profiles contain extensive hardware model details, such as form factor, ASIC, CPU, RAM, ECMP limit, and supported features. Device profiles also define how configuration is generated, how telemetry commands are rendered, and how configuration is deployed on a device. Device profiles enable the Apstra system to render and deploy the configuration according to the Apstra Reference Design. Assign resources to the blueprint. This action allocates the physical devices, IP addresses, VLANs, and ASNs to the logical devices, networks, and routing zones in the blueprint. Resources can be assigned manually or automatically by the Apstra system. Assigning resources ensures that the blueprint has all the necessary elements to generate the configuration and deploy the fabric5 . Assign user roles to the blueprint. This action is not required during the deploy phase. User roles are defined at the system level, not at the blueprint level. User roles determine the permissions and access levels of different users in the Apstra system. User roles can be system-defined or custom-defined .
Assign interface maps to the blueprint. This action is not required during the deploy phase.
Interface maps are defined at the design phase, not at the deploy phase. Interface maps are objects that map the logical interfaces of a logical device to the physical interfaces of a device profile. Interface maps enable the Apstra system to generate the correct interface configuration for each device in the fabric.

NEW QUESTION # 38
When working with logical devices, you specify where each port group is connected. In this scenario, which two Juniper Apstra Ul options are available to the operator? {Choose two.)

- A. firewall
- B. unused
- C. router
- D. generic

Answer: B,D

Explanation:
When working with logical devices, you specify where each port group is connected by selecting the port group layout and the port speed and role (s) for each port group. The Juniper Apstra UI offers two options to the operator for the port group role: unused and generic.
Unused: This option means that the port group is not configured or used by Apstra. This can be useful for ports that are faulty, reserved, or not part of the data center fabric.
Generic: This option means that the port group is configured with a generic role that is not specific to any device type or function. This can be useful for ports that are used for testing, troubleshooting, or custom purposes.

NEW QUESTION # 39
What are two formats that the cabling map can be exported as? (Choose two.)

- A. XML

- B. CSV
- C. JSON
- D. HTML

Answer: B,C

NEW QUESTION # 40
You want to apply a configlet to a specific device using Juniper Apstra. Which two parameters would be used to accomplish this task? (Choose two.)

- A. tags
- B. hostname
- C. form factor
- D. port group

Answer: A,B

Explanation:
To apply a configlet to a specific device using Juniper Apstra, you need to specify the device's hostname and tags. The hostname is the unique identifier of the device in the Apstra system, and the tags are the labels that you can assign to the device to group it with other devices that share the same characteristics. You can use the hostname and tags to filter the devices that you want to apply the configlet to in the blueprint catalog.

NEW QUESTION # 41
You must configure a static route for traffic to exit a configured routing zone. In the Juniper Apstra Ul, where would you accomplish this task?

- A. under Active -> Virtual -> Routing Zones
- B. under Staged -> Connectivity Templates
- C. under Active -> Connectivity Templates
- D. under Staged -> Virtual -> Routing Zones

Answer: B

Explanation:
To configure a static route for traffic to exit a configured routing zone, you need to use the Connectivity Templates feature in the Juniper Apstra UI. A Connectivity Template is a set of configuration parameters that can be applied to a device or a group of devices in a blueprint. You can use Connectivity Templates to configure static routes, BGP, OSPF, and other network services. To create a Connectivity Template, you need to go to the Staged tab and select Connectivity Templates from the left menu. Then, you can click on the + icon to create a new template. You can specify the name, description, and scope of the template. The scope determines which devices or device groups the template will be applied to. You can also specify the order of the template, which determines the priority of the template when multiple templates are applied to the same device. After creating the template, you can add configuration items to the template. To add a static route, you need to select Static Route from the drop-down menu and enter the destination network, subnet mask, and next- hop IP address. You can also specify the administrative distance and the track object for the static route. After adding the configuration items, you need to save the template and commit the changes to the blueprint.

NEW QUESTION # 42
......

You won't need anything else if you prepare for the exam with our Juniper JN0-481 Exam Questions. Our experts have prepared Juniper JN0-481 dumps questions that will eliminate your chances of failing the exam. We are conscious of the fact that most of the candidates have a tight schedule which makes it tough to prepare for the Juniper JN0-481 Exam Preparation.
